US dollar recovers ground as traders look for rate rise

Europe's Business Newspaper

The battered US dollar bounced back on foreign exchanges as rumours circulated among dealers of an imminent tightening of monetary policy by the Federal Reserve. The market performed a swift about-turn from Tuesday's fears that low inflation would delay higher interest rates, and focused instead on the prospects for an imminent increase in rates. The dollar closed more than a pfennig and a half higher in London at DM1.5383, and was also firmer against the yen at Y98.15 from Y96.80. Page 18; Sam Brittan, Page 17; Curren cies, Page 34; World stocks, Page 38

Italy announces economic plans: The Berlusconi government last night gave a brief foretaste of its economic plans, announcing L5,000bn (\$3.1bn) in revenue would be found to keep the 1994 hudget on track and that measures producing an extra L40,000bn would be found in 1995 to reduce the public sector deficit from L159,000bn to L140,000bn, below 10 per cent of gross domestic product.

EU visa format released: The European Commission produced its proposed format for a European Union visa for non-EU citizens which would come into force from the beginning of

Compagnie Générale des Eaux: The French justice ministry has asked police to conduct two "preliminary" inquiries into alleged irregularities by the construction, utilities and communications group, in funding political parties. Page 2

\$7bn CBS-QVC merger called off after rival bid By Martin Dickson in New York bring in partners to finance its offer for

A proposed \$7bn merger between CBS. the US television broadcasting network. and QVC, the cable television shopping channel headed by Mr Barry Diller, collapsed yesterday in the face of a rival 22.2bn bid for QVC by Comcast, one of the US's leading cable television service

Comcast, which is one of QVC's three largest shareholders, with a 15 per cent stake, surprised Wall Street late on

Tuesday night with news it strongly disliked the CBS-QVC merger and was itself launching a cash and stock bid for QVC worth around \$44 a share. That is substantially higher than the \$38 a share offer for QVC announced by CBS two weeks ago.

CBS said yesterday it would not pur-sue the acquisition of QVC and would instead is unch a cash tender offer for up to 3.5m CBS shares - about 20 per cent of its fully diluted stock outstanding at a price of \$325 e share. The move will

cost about \$1.1bn, which is about the size of CBS's cash pile.

The tender was viewed by Wall Street as designed partly to protect CBS's share price following the collapse of the QVC deal, which had been viewed very positively on Wall Street and included a cash distribution to shareholders of \$175 a share.

CBS stock rose \$10 to \$310 in morning trading, while QVC jumped \$6 to \$42 and Comcast dropped \$111 to \$1411. Comcast said it would sell

QVC, which analysts said would stretch its finances. However, it denied suggestions that it was interested more in derailing the CBS deal than consummating a QVC takeover.

Still, yesterday's developments left both CBS and QVC as sitting targets for bids from other media companies and raised a question mark over the future of Mr Diller, one of Hollywood's top programming talents, who joined QVC 18

He aimed to use its television shop ping business as a springboard to build a broad-based, multimedia television programming empire. Under the CBS merger agreement, he would have become chief executive of the combined

Mr Ralph Roberts, chairman of Comcast, and his son, Brian, chief executive, played an important part in persuading

Penalties total \$158m

Price-fixing cartel given record fine by Brussels

By Emma Tucker in Brussels

The European Commission yesterday imposed record fines on 19 carton-board producers which had allegedly formed what it described as Europe's "most pernicious" price-fixing cartel. Suppliers of carton-board in

western Europe face fines totalling Ecul32.15m (\$158.58m) with the cartel's "ringleaders" bearing the brunt. Iggesund, the packag-ing unit of the Swedish forestry products group MoDo, will pay the biggest single sum of Ecu22.75m. All 19 companies must pay the fines in the next

Mr Karel Van Miert, competition commissioner, said "the massive cartel" flagrantly violated European laws. The commission described bow particiits met in luxury Swiss not to agree price rises and concealed their illegal activities by drawing up bogus minutes of their meetines to cover only "innocent'

Exercising strict discipline and making virtually no written notes, the companies were said to have carefully orchestrated price increases every six months. Hav-

ing decided what the market could bear, one company would lift prices, followed on agreed dates by the others.

On each occasion, between 1987 and 1990, prices rose hy 6-10 per cent. The commission said that often the increases were forced through against "determined customer resistance" and in spite of a fall in raw materials prices. Laggards were pressed by tha other companies into raising their prices to the agreed levels.

The companies involved are: Buchmann, Europa Carton, Gruber & Weber, Laakmann and Moritz J Weig of Germany, Cascades and Papeteries de Lancey of France, Enso-Gutzeit and Finn board of Finland, Fyskeby, MoDo and Stora of Sweden, BPB De Eendracht and KNP BT of the Netherlands, Mayr-Melnhof of OI NOTWAY, of Italy, SCA Holding of the UK. and Enso Española of Spain.

The case is the third incident in which a cartel has been fined by the European Commission this year for distorting competition in the single market. In February, Brussels fined 14 steel

Santer willing to be Delors successor

David Marsh and Roland Rudd

Mr Jacques Santer, the Luxembourg prime minister who has risen from rank outsider to frontrumner to succeed Mr Jacues delors as president of the European Commission, yesterday declared himself available for the

But as momentum behind the Santer candidacy appeared to be increasing, a Financial Times poll of newly-elected members of the European Parliament showed little enthusiasm.

Euro MPs must vet the choice

of Commission president next week. Mr Santer - viewed as a safe but uninspiring choice said yesterday he would accept the post on condition that the 11 other member states reach a consensus on appointing him.

However, an FT telephone survev of 150 members of the 567strong European parliament showed he was well down the list of candidates favoured by the Strasbourg assembly. Under Article 158 of the Maastricht treaty, heads of government are sion chief only "after consulting the European parliament". MEPs meet next week to consider the

choice. Chancellor Helmut Kohl of Germany - current holder of the rotating EU presidency meets parliamentary leaders

Leading members of the Strasbourg assembly doubt that parliament would oppose Mr Santer next week. Since he represents the Social Democratic end of the Christian Democrat political spectrum, he is likely to gain support among the two main political groupings at Strasbourg.

However the lack of enthusiasm displayed for Mr Santer in the FT poll, conducted by telephone between July 8 and 13, indicates the possibility of setbacks next week. The survey, conducted among a sample of 59 Socialist MEPs, 52 Christian Democrat-leaning members, 11 Liberals, five Greens and 23 assorted and unattached members - puts Mr Sanler in joint eighth place in the list of

favoured candidates Mr Delors and Mr Giuliano Amato, a former Italian prime minister, topped the poll ahead of Mr Jean-Luc Dehaene, Mr Ruud Lubbers and Mr Felipe González. the Belgian, Dutch and Spanish prime ministers.

MEPs show little support. Page 3 The real Delors, Page 16

Cola price Glaxo in investment war breaks shake-up after losses

out in Japan By Emiko Terazono in Tokyo

Coca-Cola Japan, the subsidiary of the US soft drinks company, has been pulled into a cola price war to defend its market against lower priced retail brands.

Facing greater competition from cheaper colas sold by leading supermarkets, the company has imported 300,000 cases of Coca-Cola from the US to sell at reduced prices in supermarkets and fast food outlets in the

greater Tokyo area. The cola price war, new to Japan, has already hit North Amarica and Europe, where national brand names are facing competition from cheaper retail

Although the bulk of Japnese Coca-Cola sales are made through vending machines, the company's sales through retailers are steadily being eroded.

Ito-Yokado, a leading snpermarket chain, has tied up with Cott, the Canadian beverage com-pany, and two other US bottlers to produce soft drinks. The retailer sells a 354ml can at Y78 (77 cents), 29 per cent cheaper than the usual can of cola, while Daiei, the nation's largest supermarket operator, has started to sell its own brand cola made in the US at Y39. The Coca-Cola

Water group faces funding inquiry

By David Buchan in Paris

The French justice ministry said yesterday it had asked police to conduct two "preliminary" inquiries into alleged irregularities by Compagnie Générale des Eaux (CGE), the construction, utilities and communications group, in funding political par-

CGE yesterday denied one allegation that it had paid money to a company associated with the Communist party for what CGE knew to be bogus services, but said that it understood that police were inquiring into whether it had exceeded the FFr500,000 (£60,240) limit on what a can give political parties per year. CGE has 2,400 subsidiaries.

Meanwhile, France's other big contracting-communications group, Lyonnaise des Eaux, said it had yes-terday brought a libel suit against Mr Thierry Jean-Pierre, a former magis-trate, who last month was elected to the European parliament. In May Mr Jean-Pierre published a document claiming that "80 per cent of political corruption was organised by two big groups. . . . carrying out services for ablic authorities".

Lyonnaise des Eaux said the reference was "sufficiently clear and precise for a large number of newspa-

pers to designate it [the company] without hesitation". It complained that these "groundless" allegations had caused "real prejudice" to the company's interests. The share prices of Lyonnaise des Eaux and CGE fell immediately after Mr Jean-Pierre's

Police interest in CGE's political funding stemmed from a corruption investigation to the French territory of Réunion in the Indian Ocean. A magistrate there, in his investigation of alleged kickbacks in the awarding of building and waste treatment contracts, has formally charged the former Socialist mayor of St Denis, the island's capital, as well as current or

former local managers of CGE and Lyonnaise subsidiaries. Pursuing his inquiries at CGE's offices in Paris in March, the Réunion magistrate came across me company papers, unrelated to the St Denis affair but which he considered suspicious enough to puse on

to Paris prosecutors. These papers form the starting point of the police inquiry that the justice ministry con-firmed yesterday. This week's edition of the Canard Enchaine satirical paper claimed that Mr Pierre Méhaignerie, the justice minister, was deliberately restraining the inquiry by ref-using to call in an investigating magistrate at this stage. But a minis-

first important for police to check whether there was "any reality to the suspected infractions"

CGE, which under French law would only have a right to see the results of any police or magistrate's investigation if formal charges were brought, said it believed the allega-tion of irregular funding of political parties related to 1982, the last year for which parties had filed full accounts. But in the 1993 parliamentary elections it said it had only gives FFr11m out of the national FFr1.4m total that went to candi-dates. "This 8.8 per cent of the total is derisory," said a spokesman.

Kuchma seeks to divisions

By Chrystia Freeland in Kiev

bridge

Ukraine's president-elect, Mr Leonid Kuchma, yesterday sought to unite his divided nation and affirm his commitment to Ukrainian independence and economic reform.

In his first public appearance since his victory at the polls, an ebullient Mr Kuchma said: "I have never suggested that Ukraine should return to the Russian empire."

Pointedly, he spoke only to Ukrainian, even in response to questions addressed to him in Russian. "I will work only for the benefit of independent, sovereign Ukraine." he said.

Mr Kuchma also held out the hope that the contested Crimea peninsula - the most dangerous flashpoint in Ukrainian-Russian relations and the most serious challenge to the integrity of the Ukrainian state will be appeased with his electoral victory. "Crimea has voted for Ukraine," he said, alluding to the region's overwhelming support for his can-didacy in Sunday's poll.

He made encouraging promises to potential western investors and welcomed the Group of Seven industrialised nations' offer of \$4bn in aid to Ukraine if it begins market reforms, but he refused to commit himself on the controversial issue of the country's nuclear status.

"I will refer to the nuclear question in the future, but first we must analyse it in greater detail," he said, in answer to a question as to whether Ukraine wili sign the Nuclear Non- Pro liferation Treaty, which expires this year.

Mr Kuchma said his priority would be to act on his campaign promise to revive the economy, beginning with changes to Ukraine's punitive taxation policies and its fixed exchange rate system which often makes exporting unprof-

"The more we tax the less money we get in the state bud-get," he said. "The current taxation system is killing business. If we stop doing that I am confident that more money will flow into the government's

Before implementing his eco-nomic programme, Mr Kuchma must assert his control over Ukraine's government, thrown into confusion by the unex-pected defeat of President Leonid Kravchuk. The president-elect struck an initially conciliatory tone, promising that there would be no witch hunt". He also said he had met Mr Vitalii Masol, the prime minister, and was prepared, for the time being, to work with him, although there would soon be changes in the cabinet.

Behind the placatory phrases, however, were signs that once he has established himself in office, Mr Kuchma intends to rule Ukraine with a strong hand. "I did not take power in order to give it away," he told reporters.

Struggle for control of TV in Italy

Robert Graham in Rome surveys the battlefield as new RAI board takes over

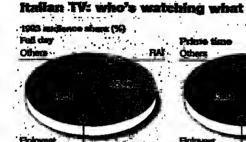

new five-strong board yesterday took control of the RAI, Italy's state broadcasting corporation, amid a growing debate within the country over control of the media by the government.
This is the first European

administration whose prime minister, Mr Silvio Berlusconi, not only owns television interests but controls almost half the nation's airtime through his Fininvest media empire. The board was approved late

on Monday as a result of a compromise between Mr Berhisconi's Forza Italia party and the other two main partners to the right-wing coalition - the populist Northern League and tha neo-fascist MSI/National Alliance.

The members include a medieval historian, a prominent female stockbroker, and businessmen close to Confindustria, the industrialists' organisation. Their backgrounds reflect a sharp swing away from the cultural influences inspired by the left in the post-war era. They displace a transitional

team, dubbed the professors because of their academic backgrounds, which was appointed last year to manage the RAL pending the outcome of general elections and an

eventual reform of broadcasting. Its mandate was due to ran until 1995.

As he prepared to hand over the chairman's office, Prof Claudio Dematte was less concerned at his enforced depar-ture than that of the ill-defined future of television. "A year ago, on July 13, I accepted this job - to act like a civil servant carrying out a transitional role at the RAI," said the 52-yearold, Harvard-educated professor of business administration. "The government is perfectly entitled to change the RAL But the way it was handled was unfortunate."

President Oscar Luigi Scalfaro was obliged to intervene so as to prevent Mr Ber-Insconi exercising direct control over the appointment,

leaving it in the hands of the speakers of the two houses of parliament. As a result, the league has ensured that the board is not completely under the thumb of Mr Berlusconi.

"As a teacher of business administration, the first thing I tell students is that the shareholders of a company must entrust management with a clear mission... But the new management has not yet had its role defined," said Prof Dematte.

So far, the government has only talked of improving the RAI's finances - the formal excuse for sacking the board. With losses of L479bn (\$317m) and outstanding debts of L1,496bn in 1993, no-one disputes the financial fragility of the RAL But a savage cost-

cutting programme is under way that includes a 15 per cent reduction in staff and the ending of abuses of overtime and foreign travel. By 1995, a modest surplus is projected.

With what seems a reasonable restructuring plan in place, it is hard to escape the conclusion that the government is more interested in exercising control over a medium which every Italian watches for an average of four hours a day. Control in this sense is not simply a question of the political content - just as important is the ability to shape the RAI's future and decide whether the state should retain a presence to

"RAI's three channels are too many." said Prof Dematte. If changes are to be made, he argues, the government should clarify whether the RAI either continues to offer a broad base of programmes or concentrates on specific and minority interests.

For instance, the focus could be on news, current affairs and culture, ignoring entertainment. Or it could operate one general channel and other specialised channels (sport, films, etc.). At present, Fininvest's channels are heavily oriented

enting almost 40 per cent more hours of films, chat shows and soaps. Its news side loses

Prof Dematte insists that any anges in the structure of the RAI must take account of Fininvest's own three commercial channels. There is an effective duopoly between the RAI and Fininvest, where both have been conditioned by competing against each other." Ferocious competition in the late eighties forced up the cost of each other's stars and imported pro-

Whatever service you take from the RAI potentially bene-fits the competition," claims Prof Dematta. This also applies to advertising, Fininvest being especially sensitive to the RAI's 7.2 per cent increase in advertising revenue when the market was stagnant in 1993. Thus the reform of the RAI

inevitably raises a conflict of interest between Mr Berlusconi reshaping state television and his continued ownership of Fininvest. Beyond this, as emphasised in a debate staged on Tuesday in Milan by Mr Indro Montanelli, a veteran newspaper editor, it raises the issue of the lack of an adequate system of checks and balances on government attempts to

Germans on parade for Bastille Day in France

Chancellor Helmut Kohl has invited three leading Germans with links to the resistance against Hitler to come with him to Pagis today to attend France's Bastille Day celebrations, when German troops - among them soldiers of the 18th Panser Division platured above yesterday outside Paris - will join the parade for the first time since the second world war as members of the Eurocorps, writes Quentin Peel in Bonn. Mr Ewald-Remrich von Kleist was a junior officer involved in the July 20, 1944 con acy to assassinate Hitler, and his father was executed for his part in the resistance. Mr Klaus von Dohnanyi, former hard mayor of Hamburg, and Mr Manfred Rommel, the lord mayor of Stutigart, will also attend. Mr von Dohnanyi's father was been dered in Flossenburg concentration camp, while Mr Rommer's father, Field Marshel Erwin Rommel, was forced to commit suicide for his links to the July 20 plotters.

Police break up protest at German nuclear waste site

By Quentin Peel in Bonn

Several hundred German police moved at dawn yesterday to clear some 400 protesters from a makeshift village outside Germany's proposed nuclear waste disposal site, in an escalation of the campaign against nuclear energy.

The confrontation comes as the first delivery of highly radioactive nuclear waste is expected at the remote Gorleben plant on the banks of the river Elbe, where it is supposed to be stored temporarily pend-ing a legal decision on how to dispose of such waste permanently.

Fears of violence evaporated when police approached the impromptu roadblocks

unarmed, and the demonstrators offered only passive resis-tance. But they had to be carried away from the site before buildozers moved in to clear the road. It was uncertain last night

how soon nuclear waste deliv-

eries could start, because the protesters had dug tunnels under the entrance roads at the Gorleben site, although the storage plant itself is protected by massive security fences. Failure to resolve the question of nuclear waste disposal in the face of anti-nuclear pro-tests has left the industry's future in Germany in doubt. Attempts to negotiate an overall energy consensus, involving the electricity industry and state and federal governments

have broken down. Local government in Bonn, causing a authorities and the Lower Saxstalemate over waste disposal ony state government have plans for almost 20 years. been pitted against the federal

state's police under the German federal system, instructed them this week not to charge protesters with any offence. But the local council in the Gorleben area banned any public assembly, giving police the excuse to move in. Low-level nuclear waste is already stored at the Gorleben site, but temporary storage of high-level waste has been blocked by repeated and

organised by Ms Monika Griefahn, the Social Democrat environment minister in Lower Saxony. She admitted recently her efforts had been exhausted, and the first vitrified glass con-

tainers of high-level waste

ties, who are in control of the from the Philippsburg nuclear Gorlebea - in a salt mine curreactor in Baden-Württemberg are expected imminently, with the approval of Mr Klaus Topfer, environment minister in The so-called Castor contain-

ers are to be kept in a huge warehouse, in conditions of strict security, pending a decision on permanent disposal. That has hitherto been banned under German law, which favoured recycling. In the meantime, most nuclear waste from Germany's nuclear power stations is being sent to reprocessing plants in France and Britain, to be converted into plutonium and re-used in the

nuclear system. Any question of permanent disposal of nuclear waste at

rently being dug for the pur pose - remains in doubt because of opposition of local authorities. The Lower Saxony government wants to link any decision on use of the site to a comprehensive plan to phase out all nuclear power production in Germany.

Until German authorities at state and national level can agree on nuclear waste disposal, the industry will depend on its reprocessing contracts with France's Cogema and BNFL's Thorp plant at Sellafield to recycle waste. But if they reach agreement on the Gorleben project, a second phase of those contracts after the year 2000 may be unnec-

Japanese cars lose ground in Europe

By Kevin Done, lotor Industry Correspondent

Jananese carmakers have suffered a heavy loss of market share in the west European new car market in the first six months this year, their competitiveness hit hard by the rapid appreciation of the yen.

Overall sales have risen by 6.8 per cent to 6.5m from 6.08m. in the corresponding period a year ago, according to industry estimates. Sales by Japanese carmakers, by contrast, have fallen by 5.8 per cent to an estimated 712,000 depressing their share to 11 per cent from 12.4 per cent a year ago.

Seven of the eight Japanese European market have seen volumes fall in the first six months - Suzuki and Daihatsu have both lost over a fifth.

Last month, total sales rose in west Europe by an estimated 12.9 per cent to 1.065m from 943,000 a year ago. The recovery has strengthened significantly in the past two months, and new car car sales in west Europe have been higher than a year ago in five of the past six months. Last year, they fell by more than 15 per cent, the steepest annual decline in the post-war

In June sales were higher than a year ago in all 17 markets across west Europe led by the UK, Spain and Scandina-via in the first half of the year, sales were lower than a year ago in only four markets Italy, Austria, Portugal and Greece - while sales in Germany rose only marginally. Significantly, demand has

picked up in the past two months in both Germany and Italy, the leading European volume markets. Sales in Germany in June rose year-on-year by an estimated 5.6 per cent; in Italy by 7.1 per cent. Four of the big six volume carmakers in the west European market - General Motors (Opel in continental Europe and Vauxhall in the UK), Peugeot Citroën, Ford and Renault - have all gained ground. Peugeot sales have risen by an estimated 13.1 per cent in the first six months helped by

recovery of the French market.

Volkswagen is suffering from weak demand for VW and Audi, but has seen sales rise for Seat and Skoda, its Spanish and Czech subsidiaries. Some of the biggest gains have been achieved by the specialist makes, Mercedes-Benz, Saab, Volvo and Rover.

Services take lead in Russia

Services are now contributing more to the Russian economy than manufacturing - a remarkable sign that reforms, painful and still far from complete, may be working.
Figures from the state

agency Tosaomstat reveal a momentous shift to an economy which in Soviet times was expressly dedicated to production. It means that Russia is now developing the begin-nings of a profile associated with advanced economies where services account for a higher proportion of gross domestic product and employment than making things.

However, it appears that much of the improvement is due to the informal or "grey" sector of the economy, so defined because it at least pays no taxes and parts of it may be wholly criminalised. Studies of this sector differ as to its size, but the average estimate is that it may account for around 25 per cent of gross domestic

The figures for the first six months for this year showed that services of all kinds generated nearly 50 per cent of GDP estimated to total Rbs245,000bn. Manufacturing output, by contrast, contributed 42.5 per cent and has declined by more than 25 per cent in the first half of this year. Engineering was particularly hard hit, falling by about 44 per cent on the first six

months of last year, Investment shrank by 27 per cent in the first half, but the share of investment in private and semi-private enterprises

to 40 per cent of the total. Foreign investments in the period

was only \$280m. At the same time, the figures show that real dispos income has gone up by some 10 per cent over the same time last year.

Experts now in Moscow on missions from the main inter-national financial institutions say the apparent paradox of abling production and rising income is explicable in large part because of the growth of the "informal" secmatter for estimations.

Alitalia, unions reach accord

The management of Alitalia, Italy's state-run national airline, yesterday reached a ground-breaking agreement with the main trade unions that involves the ending of damaging restrictive labour practices. The outline agreement follows a strike on Monday and series of wildcat strikes which caused chaos to Alitalia's operations last week. The deal centres on a commitment by unions to end their ban on cabin crew being allowed to switch between different types of aircraft, longer working hours, an unspecified cut in wages and a freeze on pay increases through to 1996 plus a stop on new recruitment. Against this, redundancies among ground staff, originally planned at 4,000, will be 1,570. But this figure does not include 800 people approved for early retirement by the previous Clampi government and natural wastage envisaged at about 800 a year during the course of the three-year restructuring plan. Yesterday Alitalia declined to give details of the agreement, which must now be put before union members for approval. Sulta, the militant cabin crew union, excluded from the negotiations and which caused the wildcat strikes of last week, said it would reject the deal. Its members, some 300 strong, also said they would go ahead with planned strikes on July 21 and 22. Robert Graham, Rome

Russians 'money-laundering'

Millions of pounds have been laundered by Russian criminals through banks in the United Kingdom since Russia's moves towards market and currency liberalisation, a senior UK law enforcement official announced yesterday. Mr Albert Pacey, director-general of the National Criminal Intelligence Service, told reporters in Moscow that of 13,000 "suspicious" transactions reported by UK financial institutions last year, 200 involved funds from the Russian Federation. "That is not a large number but what distinguishes them were the amounts of money involved - from half a million pounds to several million pounds," he said, speaking after meetings designed to build a working relationship with Russian law enforcers. Leyla Boulton, Moscow

Austria poll set for October 9

The Austrian government has called general elections for October 9 and European elections will be held early next year, after Austria's January 1996 admission to the European Union, interior ministry officials said yesterday. Austria's coalition government, led by Chancellor Franz Vranitzky's Social Democrats (SPOe) with their junior partner, the conservative People's Party (OeVP), was successful in securing a Yes vote in the referendum on EU membership in June, but the SPOe had fared badly in regional elections in March. Austria's far right Freedom Party (FPOe), led by Jörg Haider and one of the parties opposing EU membership, retained suport at regional elections, and Mr Haider has claimed that those who voted No in the referendum will support him in October. The Social Democratic party has ruled alone or in coalition since the early 1970s, and analysts argue that the SPOe coalition is likely to hold on after the election. Reuter, Vienna.

UK, France pressure Serbs

The foreign ministers of Britain and France yesterday tried to tighten the screws on Serb leaders and warned of a wider war if rival communities failed to endorse the plan for Bosnia's partition along ethnic lines. Bosnian Serb leaders told the foreign ministers of Britain and France yesterday they would neither endorse nor reject the "last-chance" plan. In meetings with Bosnian Serb leaders, Mr Douglas Hurd, UK foreign secretary, and Mr Alain Juppé, his French counterpart, said earlier the international community expected Serb forces to hand over one-third of the 70 per cent of Bosnian territory they hold. Under the plan, the new Moslem-Croat federation, would gain control over 51 per cent of the war-torn country leaving 49 per cent to the Bosnian Serbs. Mr Hurd warned that if the plan is rejected, the five nation "contact group" - comprising the US, Russia, Germany, the UK and France - bave isidered litting the arms en federation, further tightening of UN sanctions and withdrawal of the 18,000-strong UN force from Bosnia. The ministers were later due to meet President Slobodan Milosevic, who they hope will join them in persuading Bosnian Serbs to accept partition. The Serb assembly - far more radical than its leadership - has rejected previous peace plans despite intense international pressure. Laura Silber, Belgrade

UN in \$540m Sarajevo project

Despite the uncertain prospects for peace in Bosnia-Hercegovina, work is about to begin on a \$540m UN co-ordinated action plan for the restoration of essential services to Sarajevo, United Nations officials said yesterday. Nearly half the money is needed for projects described as "urgent" and scheduled for completion by the end of this year. Immediate priori-ties include restoration of the city's gas supply, water chlori-nation, refuse removal, restoration of power lines and repairs to schools in time for the autumn term. Mr Edouard Rous operations director for the action plan, said over \$58m had already been raised following a pledging conference in New York in June, the three largest donors so far being the US, Britain and Japan. Frances Williams, Geneva

Riviera beach pollution claim

Excessively high levels of bacteria from human waste were found in the water off four of 11 French Riviera beaches tested, environmentalists said yesterday. The Greens party called for an investigation on whether bathing was safe at the four beaches after laboratory tests of water quality were conducted at the request of the Vai Nissa, an association led by Pairice Miran, a political leader in the region who is also a Greens member. The tests, conducted last week, found levels of bacteria well above guidelines set by the European Union.

ECONOMIC WATCH

Portugal's trade deficit falls

Visitive trace between (Esc bri) Not seesonally adjusted)

Portugal's trade deficit fell 15.7 per cent during the first three months of 1994, compared with the same period last year, to Es300.5bn (£1.2bn), the National Statistics Institute said yesterday. An 11.9 per cent increase in first-quarter export earnings to Es663.2bn strengthened signs of recovery after recession in 1993 caused mainly by a fall in exports. Spending on imports rose 1.4 per cent to Es963.7bn. The trade deficit with the European Union, which accounts for 72 per cent of Portugal's foreign trade, fell 26 per cent to

Es178.6bn for the first quarter. Exports to the EU rose 10.8 per cent to Es496.7bn. Imports fell by 2.1 per cent to Es675.3bn. In a further sign of recovery, the government yesterday forecast an increase of almost 50 per cent in tourism earnings this year

to about Es1,000bn. Peter Wise, Lisbon ■ French M3 money supply shrank 0.8 per cent in May from the previous month, giving a year-on-year fall of 4.1 per cent,

the Bank of France said.

■ Western German wholesale prices in June rose at their fastest pace of the year, rising 0.8 per cent from May and up 1.8 per cent year on year, the Federal Statistics Office said. Spain's broad M4 money supply rose 11.6 per cent in June from May, the Bank of Spain said, while lending to the private sector rose 5.8 per cent from May.

MEPs show little support for Santer

to strengthen the European parliament's standing by giv-ing the Strasbourg assembly the right to be consulted on the choice of Commission pres-

Judging by an FT opinion survey carried out by telephone with 150 of the 567 MEPs elected on June 9 and June 12, the innovation could misfire.

Mr Jacques Delors, the present European Commission president, and Mr Giuliano Amato, the former Italian prime minister, top the list of favoured candidates. Mr Jacques Santer, the Lax-

embourg prime minister who is favourite to be chosen by the special summit in Brussels comorrow, comes well down the poll. When the newly elected deputies meet next week to ponder the new president, there is

likely to be no more than an unenthusiastic endorsement of Mr Santer. Mrs Pauline Green, the Brit-ish Labour Euro-MP who leads the dominant Socialist group at Strasbourg, said yesterday. "We want somebody of the right stature and ability to deal

with world leaders." She warned that, under the Maastricht treaty "we have a constitutional right to veto and we're prepared to use it". She also suggested that "if the [European] Council can't

Delors "theo maybe we should less, the sample of 26 per cent nominate someone." The FT's opinion poll, car-

ried out between July 8 and 13, gives only an incomplete guide to MEPs' sentiment. Nonethepolitical groupings, has pro-

of MEPs, spread throughout the European Union and iocluding a representative selection of all the Strasbourg

duced the first insight into the assembly's views.

MEPs from the following countries gave firm responses to FT researchers conducting the poll: Germany (22), UK (33),

Denmark (4), Greece (4). None of the six MEPs from Luxem-

bourg could be contacted. A total of 177 MEPs were contacted by telephone and asked to take part in the poll, with 27 declining. The MEPs were asked to list in order of preference their three favoured candidates. Mr Delors was given 35 first places, seven second places and eight third places. Mr Amato gained 23 first places, 15 second places and six third places.

Mr Jean-Luc Dehaene, the Belgian prime minister, who was the leading condidate until opposed at the Corfu summit. gained 15 first places, 14 second and 14 third. By cootrast, Mr Santer was

giveo first place by only six MEPs, with one putting him in second place and five in third. Mr Helmut Kohl, the German Chancellor and current presideot of the European Council, is likely to be told of MEPs hesitancy about Mr Santer oo Friday. At Mrs Green's insistence, he will then meet the leaders of the main political groups in the parliament to sound them out before joining

Redesign for dollar to beat counterfeiters

The US Treasury yesterday unveiled plans to change both the look and security features of the dollar, to try to stem the rising tide of take bills.

This is the first significant change to US paper money since 1929, when note sizes were reduced by 25 per cent. But, while the dollar may be out of fevour on the foreign exchange markets, it remains the currency of choice among international counterfelters.

No-one knows the full extent of their work but Mr Guy Caputo, deputy director of the US Secret Service, the Treasury's anti-counterfeiting bureau, yesterday estimated that, for fiscal 1994, fake bills with a face value of some \$130m (£82.8m) would be seized overseas and about \$70m in the

More than \$350bn of US notes is in circulation, more than half outside the US. However, the US is becoming increasingly concerned at what could be destabilising effects of counterfeiting overseas, particularly from plants in the Middle East, officials said.

Mr Lloyd Bentsen, Treasury secretary, rejected suggestions that the US should recall its existing currency and issue a new one. The edvantages of that, such as flushing out criminals' cash hordes and disrupting the laundering of drug money, would be more than offset by the potential loss of confidence in the dollar, said Mr Frank Newman, Treasury under-secretary for domestic

The US has never demonetised or recalled its currency, official after official told the House banking committee yesterday as the plans were unveiled, nor will it now.

Older bills will continue to be valid but Secret Service operations against faking the older-style notes would be stepped up and destruction of old notes, as they wore out, would continue until the vast majority of bills in ciculation he said.

Newman said.

The Treasury does not intend to change the size, colour or portraits on the notes, but the central portrait that dominates one side of each bill will be enlarged and moved offcentre, and a battery of new security devices will be intro-duced, to try to combat ever more sophisticated counterfeiting technology.

The Treasury plans to introduce a watermark and an enhanced security thread in a different position for each denomination. Such threads were first introduced in 1990 for \$50 and \$100 notes. The plans also include increased use of microprinting, in the design and in reflective material embedded in the paper.

The new bills would also fea-ture "interactive or moire" patterns that distort when copied photographically. Covert, machine-reedable features

would also be introduced. The changes would increase the cost of producing an indi-vidual note by an estimated 1 per cent and the first new \$100 notes would be in circulation by 1996, officials said, with other demoninations to follow,

Despite the fanfare with which the Treasury unveiled its proposals, officials admitted that they are now on a treadmill of introducing new design features in efforts to thwart forgers.
"In the future, more frequent

changes will be required, to meet the threat of advances in technology, and each change will necessitate further public ducation," said Ms Mary Ellen Withrow, US Treasurer.

"Our plan is a pre-emptive step to protect US currency from high-tech counterfeiting," Mr Bentsen said.

Although forged bills made up only a tiny fraction of those in circulation, "we would risk eventual diminishment of confidence in the integrity of our currency if we did not change it to meet the challenges of a new generation of technology,"

President Itamar Franco of Brazil (pictured above) looks set to order a pay rise for military and government employees early next week. which would raise serious concern about the government's ability to control spending before the presidential election due in October, reports Angus Foster in São Paulo.

Mr Franco has asked finance ministry officials to assess the government's scope to raise salaries. A decision is likely on Monday or Tuesday. "The president wants an increase; it is the size which is being discussed," said his spokesman, Mr Fernando Costa.

The president has come under pressure from the military, who complain their salaries have not kept pace with inflation for many years. Mr Romildo Canhim, a minister with

close military links and who has been reviewing pay levels, has suggested an average 28 per cent rise for most government employees. That would lift government spending by the equivalent of about \$2.5bn (\$1.5bn) this year. Analysts said the request was optimistic but that any increase at this stage would

damage the government's credibility. The current anti-inflation economic plan needs a balanced budget to helo convince markets that the government will not start printing money to pay its bills.

The president has already proposed an 8 per cent increase in the minimum wage, to take effect this year, and a package of emergency spending in Brazil's north-east, together likely to cost more than \$500m.

Bill to outlaw replacement of strikers fails

A bill to outlaw the permanent replacement of striking workers was thrown out by the Senate yesterday, in a blow to US organised labour and the Clinton edministration, Ken Warn reports from Washington. Backers of the bill failed by seven votes to muster sufficient support to overturn a Republican filibuster of the bill, meaning

it is unlikely to be reintroduced this year.

The legislation, a version of which was approved last year in the House, would have prevented companies from permanently replacing workers on strike for more pay. But employers would not have been prevented from using managers or temporary replacements to continue operations during a strike.

The bill was opposed by US business, "Senators understand this bill would have serious consequences for the economy and US competitiveness," Mr Jeff Joseph, vice-president for domestic policy at the US Chamber of Commerce, said.

Unions pushed for the change, and President Bill Clinton had promised to sign the bill if it passed Congress. Permanent replacement of strikers has been legal in the US since 1938. The issue became controversial in the 1980s.

US inflation pressure stays moderate

US inflationary pressures remain moderate. desplte robust economic growth, official figures indicated yesterday, writes Michael Prowse in Washington.

The consumer price index rose 0.3 per cent last month, and by 2.5 per ceot in the year to June, in line with Wall Street projections. The "core" consumer price index, which excludes the volatile food and energy components, rose by 0.3 per cent and 2.9 per cent respectively.

Economists at C J Lawrence, the New York broker, said inflation in the US service sector, at 3.2 per cent in the year to June, had failen to its lowest in a decade. Inflation in the goods sector has edged up in recent months, but is still at an annual rate of only 1.6 per cent.
Following reports on Tuesday of zero pro-

ducer price inflation last month, the figures were not seen as potting immediate pressure on the Federal Reserve to tighten monetary policy. Most analysts, however, expect the Fed to signal further interest rate increases in coming months, as part of a looger-term strategy to prevent rapid economic growth eventually putting strong upward pressure on inflation.

US oil loses its clout

A troubled industry finds political support hard to come by, write Jeremy Kahn and Robert Corzine

is that Big Oil can grease any jammed govern-ment wheel in Washington.

If so, some US oil executives and entrepreneurs must be wondering whether they have lost their touch.

Last March, more than 100 federal lawmakers requested a meeting with President Bill Clinton. They were concerned that low oil prices were accelerating the decline of the industry, which has seen daily average production fall from 10.245m barrels in 1983 to

that the accelerating pace of lay-offs in the industry - 22,000 jobs have been shed since November 1993 - would depress regional economies Some also feared that US dependence on foreign oil, which now accounts for more than 50 per cent of daily consumption for the first time, jeopardised national security. That meeting was not held

Mr Clinton listened to dozens of proposals, ranging from tax reform, but offered no firm commitments, according to

That cautious approach has characterised the administration's dealings with the sector. a fragmented mix of companies that includes the largest US corporations as well as some of the smallest. The debate over whether to lift the 20-year old export bao on Alaskan North Slope oli exemplifies the dubious political rewards of getting too deeply involved in oil issues.

Amid warnings that the US would be running foul of international free trade provisions Mr Clinton has offered tentative support to a deal between oil producers and some labour unions to lift the export restric

help be "revenue neutral" also Mr Clinton endorsed the concept of royalty relief and tax incentives for operations employing new drilling meth-

energy secretary.

But details of such schemes have yet to materialise, and many industry ligures remain sceptical that the administration will offer anything more

The prohibition was a 1973 oll crisis trade-off for congressional approval of the trans-Alaska oil pipeline. The ban has since been championed by a range of groups, including environmentalists who fear further exploitation of the Alaskan wilderness.

Under an arrangement engi-neered mainly by British Petroleum, the largest Alaskan oil producer, the ban would be lifted on condition that only US flagged and crewed tankers be used for export. But international shipping groups have warned that such a restriction would be prohibited under the General Agreement on Tariffs and Trade and might interfere with Organisation for Economic Co-operation and Development negotiations on ship-ping liberalisation. Mr White said Mr Clinton

was aware of the "substantial" trade complications lifting the ban poses and would only support climinating it if these issue were resolved.

NEWS: WORLD TRADE

for export credit rules

By Guy de Jonquières and Richard Lapper

European Union members would be required to narrow differences between the terms on which they provide exporters with medium and loog-term credit guarantees under a directive proposed by the European Commission yes-

The draft legislation is intended to limit unfair competition between the 12 governments in export financing and to control their mounting losses on bad debts, which have totalled Ecu7bn (£5.4bn) in the past three years.

Though drawn up in negotlations with EU government officials and export credit egencies, some of the proposals are likely to arouse concern in Britein and the Netherlands. The Commission hopes, nonetheless, that the directive will be approved this year by the Council of Ministers, on a majority vote, and will lead to a wider agreement between the 25 members of the Organisation for Economic Co-operation

and Development. EU export credit agencies guarantee medium and long-term contracts worth about Ecu30bn annually, roughly two thirds of total guarantees by OECD members. Many national treasuries are unhappy ebout the costs and risks involved. The directive falls short of calling for full harmonisation of export credit rules, but seeks more common ground in three areas:

 By setting guidelines for guarantee conditions, notably in respect of the types of risks and the proportion of loss covered. Coverage would be limited to 90 per cent of the value of an exporter's order and 95 per cent of a project's cost.

In the UK, the only EU member where cover up to 100 per cent is available, exporters have protested that a reduction in the percentage would raise their costs and handicap them against bidders from the US, Japan and Canada, which all provide 100 per cent guarantees. The directive seeks to

meet these objections by allowing 100 per cent cover when there is only one EU bidder for an international contract, or when several EU export credit agencies agree to match support evailable to non-EU bid-

agreed norm. By dividing country cover

The directive would also require greater transparency by obliging export credit agencies regularly to exchange information and explain cases of unusually large exposure to

towards that goal.

Dutch concern is understood to focus on the proposals for the wording of policies. Unlike most other European agencies, Dutch policies cover all risks

Commissioo officials said they expected growing budgetary pressures to rally governments behind yesterday's proposals. These are separate from proposals on short-term export credit rules, to be made by the Commission's competition

 By laying down rules for calculating export credit premiums. These would have to be no more than 35 per cent above or 10 per cent below an

Crisis in California, fol-lowing the Northridge earthquake earlier this year, is forcing US authorities to reconsider how they should deal

with natural calamities. Tomorrow Mr John Garamendi, California's insurance commissioner, will host a meeting to try to find a way around the decision by big US insurance companies to stop selling new policies to Californian homeowners.

Over the past two months, Farmers, a subsidiary of the UK's BAT Industries, and Allstate, another big US insurer, have stopped selling new bomeowners insurance in the state, though they are renewing existing policies. State Farm stopped adding to its Californian risks a year ago, after its losses of \$3.4bn (£2.2bn) on Hurricane Andrew made the company rethink its exposure to natural disasters. It was also the biggest loser in

The insurance crisis has taken six months to develop. At first, insured losses from the ground-shaker in southern California were put at no more tban \$2.5bn, although that would still have made it the US's third most expensive insurable event, after hurricanes Andrew, which cost \$15.5bn and Hugo (\$4.2bn). Estimates have since soured: to at least \$5.5bn, according to an industry group, and possibly to \$7hn or more, according to unofficial estimates.

One insurance company, 20th Century, nearly folded under the losses and was ordered hy state regulators to cut its axposure to future losses as part of a recapitalisation plan in April. That put pressure on others to take up the slack, leading to a domino effect in which, one by one, all hig insurers have stopped writ-ing new policies. Allstate was

swelling insurance Northridge, with a liability of the last to move a fortnight tion of policy holders that an ago. "We could not afford to be insurer can shed each year." the only game in town," said Mr Jerry Choate, president of the company's property and

casualty business. Mr Garamendi has taken steps to ensure Californians are not left uninsured. He extended the "Fair" plan adopted to cover the uninsurable risks of wildfires which tore through southern California last autumn - to cover earthquake exposure as well. This scheme offers cover to anyone who cannot get it else-

e has also called on state governor Pete Wilson to stop insurers withdrawing from California, something Florida was forced to do last year after Hurricane Andrew saw insurers halt sales of new cover to property owners in the state. Florida has since put a limit of 5 per cent a year on the propor-

In front of Mr Garamendi tomorrow will be the insurance industry's own plan. This would involve putting earthquake risks into a separate "pool", to be financed jointly by the insurers. Under one version, only new earthquake risks would go into this pot, leaving individual insurers with their existing exposure; an alternative would lead to all earthquake risk being pooled.

Californian homeowners (only one in four of whom choose to buy earthquake cover, which must under state law he offered to all policyholders) pay around \$350m s year in earthquake premiums. That could rise to \$650m as a result of Northridge, says Mr Robert Pike, general counsel of Alistate: he bases the figure on the rise in premiums Mr Garamendi has instituted in the Fair plan to cover earthquake

proposal could leave state taxpayers picking up the tab from a big disaster. If another earth-quake struck before the insurance pool had built up its reserves, the pool would borrow against future premiums. That could raise up to five times its reserves at the time, estimates Mr Pike at Alistate.

Losses above that would be

met by a \$1bn levy on insur-

ance companies.

That might be enough for a Northridge-style earthquake. But what about the proverbial "Big One" that every Califor-nian fears? The same problem exists for Florida's catastrophe fund, which has the power to borrow only \$2bn.

Two years ago, Mr Garamendi was forced to cancel a state earthquake compensation fund which would have paid up to \$15,000 to each homeowner when it became clear that the state taxpayer could be left footing the bill from a large disaster. The Californian administration only last week completed another traumatic annual budget round, in the process borrowing \$4bn from international banks, and does not want an open-ended earth-

Until Andrew, insurers had not contemplated a multibillion dollar disaster. Now they talk of the \$50bn incident which could wipe out a large part of the capital of the US property and casualty insur-The final answer, say insur-

quake liability.

ers and state authorities, rests with lawmakers in Washington. The Natural Disaster Protection Act, or earlier versions of it, has sat before Congress for some time. Like the proposed California scheme, it would cap the insurance industry's exposure. But there is little sign federal taxpayers will be any keener than state ones to pick up the rest of the tab.

Derivatives bill put to House

By Richard Waters in New York

A bill to give the US Securities and Exchange Commission greater powers to regulate the derivatives industry was introduced vesterday by Mr Edward Markey chairman of the House of Representatives sub-committee on telecommunications and finance.

The bill, which would extend SEC oversight to many dealers not now regulated, follows a call from the General Accounting Office of Congress two months ago for greater control of the derivatives markets. The rapid growth of these financial instruments, and the concentratioo of trading in the hands of a few companies, has increased the risk of a meltdown in financial markets, the

GAO warned. The Markey bill runs counter to the more consensual approach to regulation of derivatives preferred by Mr Arthur Levitt, SEC chairman.

He recently started talks with various securities companies on voluntary regulation of their derivatives activities.

Wall Street's traditional broking and dealing activities come under the SEC, but most securities firms have set up separate subsidiaries to trade in the specialised derivatives markets, putting them outside the SEC's regulatory net.

The hill introduced yesterday would require all unregulated dealers, such as those owned hy securities firms and insurance companies, to register with the SEC, and give the regulators power to set capital

standards for dealers. It would also set rules for the sales practices of derivatives firms, including a requirement for them to assess the suitability of instruments for particular customers.

The Markey bill follows leg islation proposed by the House banking committee, which would cover the derivatives activities of commercial banks

his working life. It is a photograph of Ertegun holding a cumbersome gold statuette instantly recognisable as the centrepiece of international sports crown jewels - the World Cup tro-pby. In the picture, Ertegun is sporting the awed, slightly sheepish grin that any soccer fan might wear in the circumstances. But Ertegun is no ordinary soccer fan. He is a member of the World Cup 1994

organising committee. place on the committee for his efforts over the past 25 years in belping the roots of soccer grow in a seemingly infertile land. During the early 1970s, he and his late brother Nesuhi persuaded Warner Communications to provide the financial backing for a New York team - the Cosmos - to play in the

North American Soccer League. For a few glorious years, the Erteguns, with the help of Pelé, Franz Beckenbauer and other soccer

Ahmet Ertegun says Major League Soccer will succeed in the US, writes **Patrick Harverson** from New York

greats, put the Cosmos and the NASL on to the American sports map, where it stayed until excessive spending and insufficient revenues phinged the league into bankruptcy and failure s decade ago.

In spite of the unhappy ending, Ertegun remembers the days of the Cosmos fondly. He recounts a story about Beckenbauer's astonishment at finding himself dribbling the ball towards goal in his Cosmos debut while an announcer carefully explained the rules of the game to

the crowd over the loudspeaker. But Ertegun is too busy enjoying this World Cup to dwell on the past. As someone who was always confident that the tournament would be a success, he is especially delighted with the large numbers of Americans who have attended the games. He says the television pictures which have shown stadiums following their national teams have not told the full story.

"It always looks as if there are more foreigners than Americans, but there aren't. The foreigners are very visible, and very audible. You know: 'Ooh, aah, Paul McGrath. Ooh, oah, Paul McGrath.' Right? You hear that."

Yet, he says, referring to a popular US player, "there's no 'Ooh, aah, Alexi Lalas. Ooh, aah, Alexi Lalas'." Ertegun's point is that traditional

soccer countries may not know it, but Americans have embraced the

World Cup wholeheartedly - but

He also remarks on how soccer in the US has been attracting a differ-ent kind of fan. "I learned this from the Cosmos - soccer in America is a family sport. In Europe men go to see soccer, and they sometimes take their sons, if they're old enough. Here the whole family goes. They have picnics in the parking lot. The Americans view it as a nice day

But can a top-level US professional soccer league be founded on the enthusiasm of fans who view the game as a nice day out? Remember that Fifa, soccer's governing body, awarded the World Cup to the US in the hope that the interest generated would provide the basis for establishing a fully-fledged soc-cer league, one that would last longer than the ill-fated NASL

Ertegun is realistic about whether the World Cup legacy will sustain Major League Soccer, the new league planned for next year. "The fact that it's a world event has attracted a lot of attention [to the World Cup]. Now, when we have a professional league next year, I'm not sure that a game between Tulsa and Buffalo will attract many viewers. It's a thing we've got to build again from the ground up."

That takes time, perhaps more time than Fifa or some soccer boos-terists in the US have to spare. "It took ice hockey some 30 to 40 years to make the impact it has so far. It could take us 20 years to really build [soccer] up into a top game in America," says Ertegun.

Will Americans - or Fifa - wait that long? Ertegun thinks so. "Soccer has been played here since 1900. We've had the patience to stay with it so far." The key, he says, lies in ensuring that the new league is competitive, with no single team dominating the others, as happened with the Cosmos.

And he believes that the best

American players should be allowed to play abroad, because it is only in the big European leagues that they can earn the kind of money which will start enticing young athletes away from mainstream American sports and into soccer.

It can happen, Ertegun believes, because of soccer's universal appeal. "You don't have to be 7ft tall, as in basketball, or weigh 250lb, as in American football. It's a game athletes are drawn to the games where they can make the most money. If some of our players playing abroad start to make a mil-lion bucks a year, we may see a lot of kids from the inner city hone

"Maybe we'll have some of those young men who can run 100m in under 10 seconds learn how to do the same with a ball between their feet. When that happens, we could have the world's greatest team."

Ahmet Ertegun: Atlantic Records' co-founder is no ordinary fan

Kim's challenge is to save his nation from collapse

Pyongyang's economy is caught in a seemingly endless downward spiral, John Burton reports

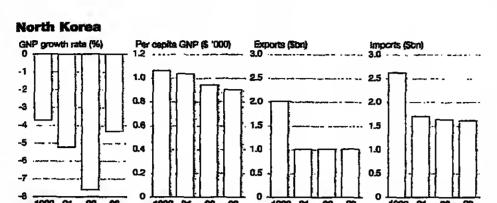

he principal challenge confronting Mr Kim Jong-il, the new leader of North Korea, is whether he can reverse the country's economic decline and save it from possible collapse.

The North Korean economy is caught in a downward spiral, with gross national product having shrunk at an average annual rate of 5.2 per cent during the past four years. The immediate problems

have been caused by the col-lanse of the Soviet bloc, which ended a barter-trade system that supplied Pyongyang with cheap and vital oil imports. The resulting energy short-age has caused factories to

work at half their capacity or

The problems have been compounded hy food shortages caused hy four years of poor harvests. Bad weather and the backward agricultural system in a mostly mountainous comtry have heen hlamed for an estimated 40 per cent shortfall in grain supplies needed to feed the 22m North Koreans. The economy has also been

mental flaws, including a highly centralised and inefficient planning system, a large heavy-industrial sector working with outdated equipment, and a huge diversion of resources to support one of the largest military forces in the

The country's governing juche (self-reliance) ideology and its attempt to create a self-sufficient economy is another main cause of the decline. Trade accounts for 13

per cent of North Korea's GNP of \$20.5bn (£13bn), an exceedingly low ratio hy international

The adverse developments represent a potential political threat to the North Korean government, since the poor economic condition may eventually provoke a popular upris-

In an unprecedented admission last December, tha government acknowledged the country's economic woes and signalled an important policy shift by downgrading the role of heavy industry. Instead, increased emphasis

was placed on agriculture, the growth of light industry to supply more consumer goods, and the development of export industries that could provide North Korea with badly needed hard currency to huy oil and food supplies from abroad. Some analysts helieve Mr Kim Jong-il was hehind the changes. "Although Kim

Jong-il has not made any public pronouncements on economic reforms, the people who surround him are primarily technocrats who want a change in economic policy," one western diplomat said. The key element in a future

North Korean economic strategy is to attract foreign investment which would support new plant facilities that could produce goods for export.

North Korea is already taking part in a project sponsored by the UN Development Program to develop a free-trade and investment zone around the cities of Rajin and Sonbong in north-eastern North Korea. Other free economic zones are being proposed for the port of Nampo near Pyongyang and Sinuiju on the border with

The country over the past year has also revised its foreign investment laws, basing them on Chinese practices, to attract foreign capital and technology. But political considerations will probably limit the opening of North Korea to foreign investment, which raises doubts about the effectiveness of the proposed reforms in saving the economy. Officials in Pyongyang worry that an extensive opening of the country will undermine the government as the population becomes exposed to outside influences.

Mr Kim Il-sung, the late president and father of Mr Kim Jong-il, summed up the dilemma that foreign invest-ment poses for North Korea: "We must open the window to let the wind in, but not the

in an attempt to retain control, the proposed free economic zones are mainly located in sparsely populated regions. This may prove to be a disincentive to foreign investors. Samsung, the South Korean

conglomerate, recently dropped plans to help finance a railway connecting the Rajin-Sonbong region with China because it regarded the area as being too isolated.

Foreigners are also concerned about how well their investments will be protected; North Korea has shown little inclination to repay \$1.6bn to foreign banks on loans it bor-

But South Korea's main busi ness groups at least are rager to set up factories in North Korea, to take advantage of a cheap, disciplined and Korean-

speaking labour force. Initial investments would focus on production of textiles and electronic goods, but activity could eventually expand to the operation of heavy-indus-try plants such as steel, and the construction of ports and other infrastructure projects.

Seoul has so far blocked business ties with the North because of the continuing dispute over Pyongyang's nuclear programme. But if the issue is resolved. South Korean investment is expected to receive the active backing of the govern-

Seoul wants to prevent a sudden economic collapse of the North, which could trigger a costly and rapid reunification of the two Koreas, Instead, it hopes to promote the gradual upgrading of the North's industrial structure, which would reduce reconstruction costs in the future once the countries are united.

Signs of change in Golan deadlock

Burgh al-Kuneitra restaurant in Syria Is a nunefield which marks the 1974 consessor line with Israel The terrace offers a panoramic view of the Israeli-occupled Golin Heights, with lush green fields, next rows of cherry trees and high-tech surveil. lance posts.
The front entrance opens

into the ghost town of "liberated" Kuneitra, once home to more than 50,000 Syrians hut now abandoned and in ruins.
While Jordan and the Palestinians are pushing towards peace with Israel, the future of the Golan Heights bedevils

israeli pullout from the plateau while Israel talks about withdrawal. No hig breakthrough is expected during a visit to the region this weekend by Mr

talks between Israel and Syria.

Damascus demands a complete

James Whittington reports from Kuneitra, Syria

tary of state. But most Syrians believe a peace deal is inevitahle. Signs are there that President Hafez al-Assad is preparing for such an eventuality. Nearly 80 per cent of the Golan Heights was captured by Israel in the Six-Day War of 1967. Six years later, in the October War of 1973, Syria tried to win it back but failed when Israeli forces pushed Syrian troops to the edge of Damascus. A ceasefire line was negotiated by Dr Henry Kissinger, then US secretary of state, whose shultle diplomacy entailed 43 visits to Damascus

Warren Christopher, US secre-

in less than eight months. In June 1974, most of the newly-occupied land was returned, plus around 300 sq km of territory lost in the 1967 war, including "liberated" Kuneitra and its restaurant.

Since then, there has been deadlock. The Israelis have huilt 40 settlements on the plateau which are home to about 15,000 settlers. They cultivated the fertile soil and set up listening posts in the hills. In 1981 the Knesset, Israel's parliament, formally approved annexation of the area

Syria left most of the Golan left to it as it was at the end of the war. Some 400,000 displaced Syrians got temporary housing in and around Damascus. President Assad proceeded to shape nearly all his foreign and domestic policies around the goal of achieving full return of the Golan Heights.

So far, real progress between Syria and Israel has been virtually imperceptible. But serious and detailed negotiations have been going on, primarily through the US administration, with President Bill Clinton's meeting with Mr Assad in January and Mr Christopher's three stops in Damascus this year. This week Syrian officials were saying they have nothing new to offer from their last proposal which demands the following from Israel:

 It must scrap its annexation of the Golan Heights. It must recognise Syria's sovereignty over the Golan. It must commit itself to a full withdrawal, as required by UN Resolutions 242 and 338. There must be equal secu-

rity arrangements in the area.

Normalisation of relations must be linked to the speed of the Israeli withdrawal. While negotiations continue, President Assad has been quietly making changes in expec-

tation of a peace settlement. A new road is being built from Damascus to the Golan. Scores of long-serving governors and party officials have been or are soon to be replaced. A reshuf-fle has taken place in one of the main pillars of Mr Assad's regime, the armed forces. New appointees to the civil

A STATE OF THE STA

administration are seen 58 more liberal and open to peace thau their predecessors. But the new generals are hard liners. Much to Britain's dismay the new air force chief Cen Mohammed al-Khouli, is believed to have masterminded the 1986 Nizar Hindawi plot, when Syria allegedly tried to blow up an Israeli aircraft at London's Heathrow Airport.

As usual, President Assad is ruling with a two-edged sword. After decades of anti-Israeli propaganda he needs fresh hureaucrats who can work with a peace settlement. But at the same time he needs hardline loyalists to maintain discipline in the 450,000-strong armed forces which have the most to lose from peace.

This approach will not be welcomed by Israel or the US. but auch is the nature of the president's hold on power.

Murayama backs overhaul of Japanese defence policy

Mr Tomiichl Murayama, Japan's new socialist prime minister, yesterday pledged his backing for the first overhaul

of defence policy for 18 years. The defence review, hy an independent panel set up in February and due to conclude its work next month, is expected to propose heavy cuts in the number of ground forces hut at the same time prepare for fast responses to regional crises and increased spending on defence electronics.

Japan is one of the last leading industrialised countries to adjust its defence guidelines to the end of the Cold War, a reflection of a taboo on defence debate, linked to the pacifist constitution.

Panel officials are understood to lean towards reducing the number of ground troops from the present 150,000 to hetween 100,000 and 130,000,

which is likely to win support from Mr Murayama's pacificist Social Democratic party.

But the SDP may find it harder to accept the panel's proposal, in a draft report yesterday, that the military should establish an organisation to oversee Japanese contributions to United Nations peacekeeping. Mr Murayama hinted at his own reservations over UN peacekeeping by responding cooly to the Ger-man constitutional court's decision, the previous day, to permit German troops to take part in UN operations. "Each country has its own situation,"

The draft plan also aims to prepare Japan to defend itself against several regional threats, such as North Korea, and to support the US presence in east Asia. The draft report calls for co-operation with the US on anti-missile systems, a response to Washington's calls

for Tokyo's participation in its theatre missile defence programme, designed with North Korea in mind.

The existing 1976 defence programme, on which equipment procurement is still based, says Japan must prepare to defend itself, with US help, against a single large security threat, the former Soviet Union. It is clearly out of line with

present threats. The government wants to adopt the new guidelines before it prepares next year's hudget. It has already started to squeeze military spending, up a mere 0.8 per cent this year, the smallest rise in 34

Mr Murayama's moderate stance reflects the dominance of the conservative Liberal Democratic party in his threeparty coalition. Officially, his own SDP believes Japan's military self-defence force is

unconstitutional and that the US-Japan defence treaty, which allows US forces in Japan, should be revoked.

In another indication of the moderating influence of his dependence on the LDP. Mr Murayama yesterday withdrew his ban on official ministerial visits to the Yasukuni shrine to Japanese war dead. Four LDP cabinet members wish to visit the shrine on August 15, the 49th anniversary of the end of the second world war.

However, Mr Murayama has found scope to express his party's instincts, hy sending an effusive telegram of condolence over President Kim Il-sung's death to the North Korean authorities.

Mr Murayama said he was acting as SDP leader, rather than prime minister, hut was reminded by some cabinet members that Japan was supposed to have oo diplomatic relations with North Korea.

Beijing official for Taipei

By Laura Tyson in Taipei

China is to despatch its chief Taiwan negotiator to Taipel later this month, making him the most senior mainland official to set foot on the island since the two parts of China split in 1949. In an apparent easing In

cross-strait ties, Taipei and Beijing have agreed to resume talks over fishing disputes and repatriation of illegal immi-grants and airline hijackers. Mr Chiao Jen-ho, Taiwan'a chief China negotiator, yesterwelcomed the July 27 visit to Taipei by his Beijing counterpart, Mr Tang Shuhei, who notified Taipel late on Tuesday of his intention to accept its invitation. The news came as China

responded to a recent Taiwanese white paper, by saying Betjing "firmly opposed" any moves "detrimental to China's territorial sovereignty and the cause of peaceful reunification".

EU in danger of losing out on Asian economic miracle

By Lionel Barber in Brussels

The Enropean Union risks losing ont on the "economic miracle" taking place in Asia unless it strengthens political ties and boosts investment in the region, according to a European Commission policy

paper.

The document agreed in Brussels yesterday calls for s radical rethink treats as a coherent economic region encompassing Japan, China, and East Asia. By the end of the century, the paper notes that 1bn Asians will have significant consumer spending power, with 400m having average disposable incomes at least as high as

Europeans or Americans. Mr Jacques Delors, president of the European Commission, drove home the increasing importance of Asia during last weekend's Group of Seven summit in Naples. By the

year 2010, the G7's share of global output would fall from 75 per cent to 50 per cent, he predicted. The German presidency of the EU

encouraged the Commission to produce a paper on Asia as a means of increasing awareness of the region'a economic importance and making the Union more outward-looking. The paper lists several priorities

extend the coverage of the UN conventional arms register and the Nuclear Nou-Proliferation treaty. Deeper co-operation on controls of sensitive technology, and "strengthening the policy of encouraging the improvement of human rights".

 Raising Europe's profile in Asia, through more education visits and training programmes, cultural exchange and twinning cities: "The • A wider political dialogue to EU needs to make a far greater

effort to explain its policies." says.

● Strengthening Europe's economic presence, hy lohhying more forcefully for the removal of laws restricting trade and investment, as well as the discriminatory use of intellectual property rights. standards and testing.

The paper also calls for more joint ventures between European and Aslan companies; extending scientific co-operation, opening up "European Business Councils" in

China, Indochina and Pakistan; and following up the EU's "market transition programme" in Victnam with other moves to offer policy sdvice to former command economies now embarked on economic reform.

The EU is now the second biggest market for exports from developing Asian countries after the US. It absorbed Ecul28bn (£101bn), or 27 per cent of their total exports, in 1993.

HK pension plan is aimed at a maturing society Colony's government wants to provide for growing number of over-65s, writes Simon Holberton

The words "welfare state" and "Hong Kong" have always seemed to be at odds, given the colony'a freewheeling capitalist image. But when on Tuesday the government outlined plans for a com-prehensive old-age pension scheme, some in the colony began to wonder whether a society whose state provisions had always stopped at the basics of housing, health and education was now about to be

taken a benefit too far. The consultation paper issued for comment drew a strongly negative response from husiness leaders and their representatives in the colony's Legislative Council (LegCol. which may eventually he called on to turn the proposal into law. China, which would have to approve any scheme through the Joint Liaison Group before the government can proceed, gave conflicting

Hong Kong's aged residents currently rely on a fragmentary system of old age allowances and invalidity benefits. The scheme would provide The cost of greying Hong Kong 1994 95 98 97 98 99 2000 01 06 f1 16 36 56 People aged 65 years or above, as % of the population

a pension of HK\$2,300 (£193) a month, index-linked to the rate of inflation. In all, 3 per cent of

those over 65 years of age with will be collected and transferred to a apecially established fund that will be isolated so that all of it would be Hong Kong's annual wage hill dedicated to pension payments and administration of the will have to consult closely

Employees would contribute 1.5 per cent of their pre-tax income and employers would make a matching contribution. The pension would be meanstested at first - to exclude those with assets, other than the family home, in excess of HK\$2m - but after 10 years would become a universal benefit. All employees would make contributions from the outset. The government's defence of

its initiative - which will he subject to a three-month consultation exercise - is that Hong Kong is becoming a mature economy and that there is growing community pressure for a state pension. People over the age of 65 will double as a percentage of Hong Kong'a population to 18.5 per

"There is a need to fund a growing number of poor, old people in Hong Kong, especially with the decline of the extended family in recent years," said one official. "It will not be up and running for 18 months to two years so we with China; they will have to

administer it." Wen Wei Po, a pro-Beijing newspaper in Hong Kong, yesterday delivered a hlistering attack on the plans. Having done nothing about pensions for 150 years, Britain had "suddenly raised such a ridiculous and imaginary idea" just three years sway from the 1997 transfer of sovereignty, the paper commented.

lt was unclear, however, if this represented Beijing's authoritative response to the plan. Mr Tam Yiu-chung, a leading pro-Beijing politician in LegCo, said he supported the plan, which was made available to Beijing officials last week.

Unions also lent their support to the plans. The pro-business Liheral party said it opposed the scheme in principle, hut hedged its position until it had "consulted" more widely. The immediate reaction from husinessmen was to warn that employers were likely to recoup the costs of contributions through higher

The pension would be paid only to those who are permanent residents of Hong Kong, yet contributions will have to be paid by all who work in the colony, including expatriates... The provision of a state pension has always been opposed hy the colony's strongly pro-

husiness élites which have seen it as symbolising creeping "welfare-ism". Although more than 50 per cent of Hong Kong's population lives in public housing and enjoys subsidised health care and free schooling, there is no provision for unemployment benefit, and other forms of income support are primitive.

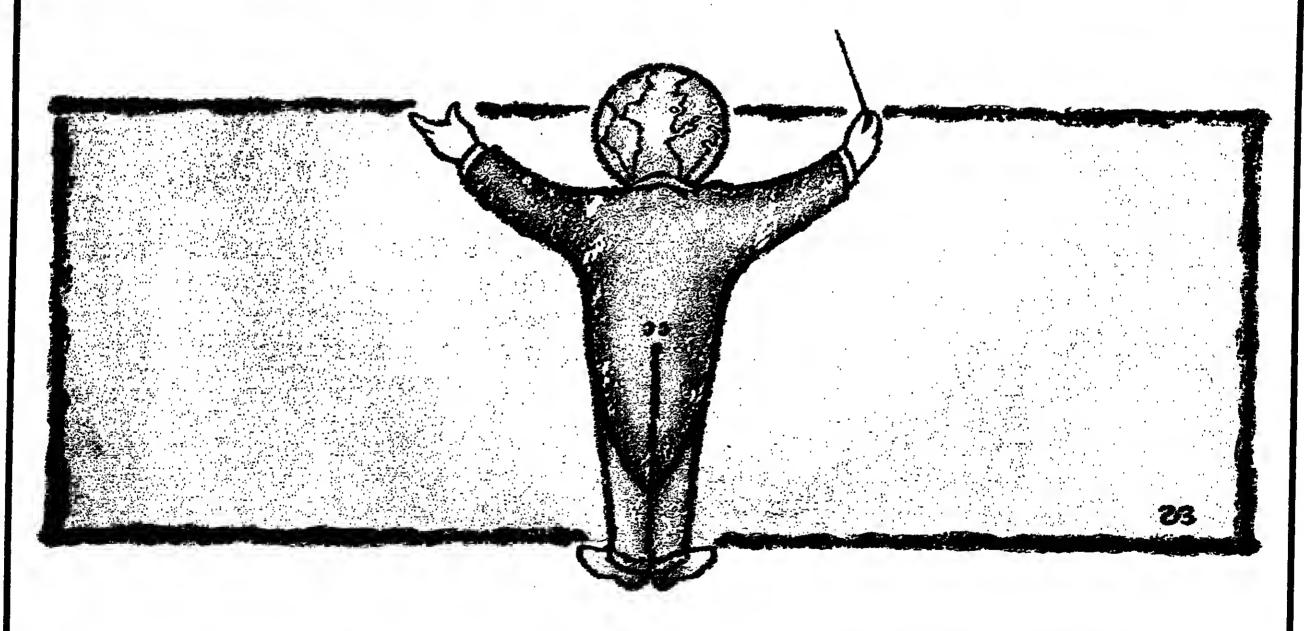

in the mid-1980s a propesal for a Singapore-style, compulsory savings central provident fund (CPF) was killed off, with prominent husinessmen siding with the government, it resurfaced two years ago when China and leading Hong Kong husiness figures united to push the idea. Beijing is very keen on the CPF, to which it attrihutes much of Singapore's economic success, and plans to experiment with one in Shang-

The Hong Kong government, however, rejected a CPF and a mandatory privately-run retirement scheme because both would take too long to produce returns to contributors. By contrast, the pension scheme now being proposed would be operational from day one by virtue of a HK\$15ho contributioo from the government.

The proposed pension would be index-linked to inflation rather than earnings. The government estimates that in 2056 earnings related indexation would be HK\$145.5hn (in 1994 prices) more than inflation-re-

The government has rejected suggestions that the introduction of a pension would be the beginning of a first-world type welfare state in Hong Kong. It said that under ita acheme. pension paymenta would amount to about 1.5 per cent of gross domestic product, compared with an average of 15 per cent of GDP for total welfare payments in west European

BT and MCI present Concert. Your opportunity to control the world.

It's the best of both worlds.

BT is the UK's largest company, and one of the world's leading suppliers of international telecommunications.

MCI is the second largest long-distance carrier in the US, and internationally one of the world's fastest growing. Together, we've combined our resources, energies and

know-how to create Concert. The first company ever to make fully integrated global telecommunications a reality.

Concert's range of services are available through BT and MCI.

The power to orchestrate telecommunications around the world is now yours.

SFA to monitor derivatives

By Norma Cohen,

The Securities and Futures Authority, the self-regulatory body for leading City firms, is monitoring the ability of the largest securities houses to assess the risks they take on with complex derivative prod-

In a series of inspection visits, some of the firms, which are largely subsidiaries of the world's largest commercial and tovestment banks, have been told to alter their risk models and their management structures.

Also, the SFA is insisting that firms whose senior directors do not have a reasonable grasp of the work done by the more junior "rocket scientists" who design complex products to appoint a team which does. The team should report directly to the board, SFA offi-

In its annual report for the year ended March 31, 1994, the SFA said the switch in strategy follows a review of the way its surveillance division carries out its duties at firms "whose operations cover a wide range of different products and especially over-the-counter and derivative and der

derivative products."

A special surveillance team will monitor the activities of 24 major securities houses and an annual "risk management review" will be conducted. So far, the reviews have been conducted at 12 firms, the annual report said.

The change in strategy is in line with growing concern among securities regulators world-wide about whether firms which sell over-the-counter derivatives understand the risks they are taking on.

In particular, the SFA is looking at the models each firm uses for determining the pricing of complex bespoke derivative products for which there are no screen-based prices. The prices of these products vary widely with market movements and the amount of capital required to be held for each will vary widely depending on how the price is determined.

Regulators fear that inadequate pricing models will leave firms holding too little capital to cover losses in highly volatile trading conditions such as those earlier this year.

those earlier this year.

Separately, the SFA said its administrative expenses have risen, partly reflecting increased costs of professional services associated with its enforcement duties.

Regulator wins crucial City case

By John Mason

A High Court judge yesterday, in a sweeping judgement which will affect regulators all over Britain, ruled that the Securities and Investments Board, the City's chief regulatory watchdog, cannot be sued for damages by private individuals unhappy with its enforcement activities.

The UK courts have never been asked to rule on a point of law about the remedies available to those who feel aggrieved by the way regulators carry out their duties.

Mr David Mayhew, solicitor for Clifford Chance, the SIB's counsel, said the ruling will also buttress the Bank of England, the Monopolies and Mergers Commission and the Office of Fair Trading, among others

Afterwards, SIB officials expressed considerable satisfaction at the result. One said: This was about the propriety of the exercise of our powers. We have very strong powers to do things and this case was a test of whether we use them

properly".

Mr Justice Lightman threw out the action seeking £7m in damages from the SIB in a case

brought by Melton Medes, a trading conglomerate accused of breaching pension fund

investment rules.

The plaintiffs had argued that the SIB had disclosed "restricted information" in violation of Section 179 of the Financial Services Act to the pension scheme beneficiaries who are asking the Company to restore a similar amount to the scheme

Had the scheme beneficiaries not obtained the information, they would not have pursued their case against Melton Medes for restitution to the scheme, they argued.

in his ruling, Mr Lightman said that the law clearly states that individuals have no private right of action if they feel aggrieved. The intent of Section 179 is to protect the special interests of informants and "to control in the public interest the use of information acquired rather than to subject SIB, in this respect, to private law actions."

The only remedy open to Melton Medes is to seek a criminal prosecution of the SIB or a judicial review of its conduct. He denied the plaintiffs request for leave to appeal his ruling and awarded indemnity costs to the SIB.

Shrinking state still proves top heavy

By Philip Stephens, Political Editor

Top government administrators, the legendary 'mandarins' of Whitehell, are up in arms. They have too many ministerial masters.

On the eve of a government

policy paper foreshadowing more cuts in administrative jobs, the mandarins are complaining that ministers have exempted themselves entirely from the drive to reduce the size of the state.

A handful of optimists in the state of the state.

John Major might use the forthcoming reshuffle to practice what the government preaches and cut the number of ministerial jobs in the government.

Realists predict the prime minister will he more concerned to maintain the fragile peace amongst the Tory rank-and-file, so patronage will again come before principle.

The Treasury estimates that

The Treasury estimates that privatisation and contracting out has cut the size of the government hy about a quarter since the start of the Thatcher revolution in 1979.

Civil servants numbers also have dropped 24 per cent from 732,000 to 554,000. Today's paper will forecast another fall to helow 500,000 within the next four years.

However, comparison of the official lists show that there were 81 ministers and 21 paid government whips (in charge of internal party discipline) in Mrs Margaret Thatcher's first administration. Now their are 87 ministers and tha sama number of whips.

number of whips.

If these well-heeled ministers had suffered the same squeeze as their mandaring the number.

chauffered to and from their plush offices at taxpayar's expensa would have fallen sharply to a mere 62. The cost is not borne only by the taxpayer. Superfluous ministers add to the workload of their

Nor can these myriad parliamentary under-secretaries, ministers of state, solicitors' general and economic secretaries claim their Westminster workloads have increased. Responses to MPs questions more often than not consist of referrals to the relevant agency or urivatised business.

Maxwell action dismissed

By John Mason

A legal action brought by the Maxwell pensioners to claim up to £235m from the administrators of Maxwell Communication Corporation was dismissed by the Court of Appeal.

Three appeal court in Appeals rejected the argument of the liquidators of Bishopsgate Investment Management, the former manager of the Maxwell pension funds, that It had a prior claim to the first £135m of the money raised from the sale of MCC assets.

Prica Waterhouse, the administrators of the largest quoted company run by the late Mr Robert Maxwell, have so far raised about £680m from such asset sales.

PW has proposed treating BIM in the same manner as other creditors, by paying dividends raised from the asset

sales.

However, BIM had claimed it had a prior claim over the full amount of EIM's pension money wrongly paid to MCC.

The ruling will not enable PW to bring forward its plans to pay interim dividends to creditors since BIM still has other claims outstanding against MCC which have to be

settled in the High Court.

The appeal court awarded costs against BIM and refused it leave to appeal to the House of Lords. However, lawyers for the former pension managers said that they still intended to apply for e further hearing.

No peace dividend for the people of Plymouth

Roland Adburgham reports on the plight of a regional sub-economy based on defence and the historic city at its heart

n Plymonth's historic Hoe, overlooking the sea, there is an imposing memorial to the port's servicemen and women, killed in the two world wars. It is inscribed with no fewer than 23,182 names. Today, Plymouth is having to come to terms with the casualties of neace.

The 860 redundancies at the city's Devonport naval dockyard, announced last month, are the most receot consequence of the peace dividend. In the seven years since the consortium DML took over the privatised management of the yard, the workforce had shrunk from 11,400 to 4,350 even before the latest job losses. The euphoria last year of winning the contract to refit Trident submarines has evaporated.

Plymouth has one of the highest

concentrations of defence establishments in the country. As well as the

dockyard and employers such as British Aerospace, there are 18 military bases in its travel-to-work area, According to Plymouth Business School, defence accounts for more than one in five local jobs,

The city fears any benefits of national recovery are heing cancelled out by cutbacks which Mr David Jamieson, Labour MP for Devonport, described as having a major and devastating effect. It is widely expected that fomorrow's the defence review could entail further prilosses, with the possible relocation of Royal Marines.

Mr Tudor Evans, chair of the city's employment and economic development committee, said: "We already have poverty as intense in some wards as anywhere in the country," he said. In the Plymouth travel-to-work area 17,600 people are unemployed, or 11.6 per cent. In some

parts of the city, male unemployment is 25 per cent. The first years of DML cutbacks saw early retirements and large pay-

saw early retirements and large payoffs. Redundancy costs, met by the taxpayer, averaged £30,000 a person. Mr Peter Whitehouse, DML'a husiness development director, said: "Now the young and those who genuinely want to work will be unemployed and the social and economic impact will be much higher."

Many of the redundancies are among the well-paid and skilled. At

the crowded Devonport job centre, nearly all the vacancies are for unskilled or semi-skilled work, often part-time.

The defence dependency, not only of Plymouth but of the counties of Devon and Cornwall, has stimulated a recognition that the sub-regional

economy needs to be restructured. A

public and private sector partner-

and, westcountry bevelopment corporation, has been set up to help job creation when many traditional industries, like fishing, are also undergoing structural change. European and government funding is starting to come into the region. Plymouth last year gained European Objective 2 status. It has also been designated an assisted area. But Plymouth Business School calculated that funding to compensate for the loss of defence-related spending had been insignificant.

"Much of it has come very late and it's just too little," said Mr Jamisson. "There is no joined-up thinking hetween one government department and another. The Ministry of Defence is acting totally unilaterally."

ally."

The government has become conscious of its vulnerability in the south-west (last month the Conservatives lost the European parliamentary seat of Cornwall and Plymouth West to the Liberal Democrats).

One action has been to create e

development corporation for three of

the waterfront military sites in Plymouth. Mr. John Collinson, Its chief executive, who is seeking a variety of inward investment from leisure to light industry, said: "I am heartened by the interest. Plymouth is probably better known around the world than it is in London. It is about time the city took its rightful place on the stage and I think it will."

Companies such as Toshiba of Japan and Wrigley of the US have plants in the city. To encourage tourism, Plymouth is promoting itself as a "historic waterfront city." Mr John Mannell, chief executive of Devon & Cornwall training and enterprise council, said: "Plymouth has such natural potential - it is a wonderful place to be. But as it sheds its gartson town image, it is finding it difficult to say what it wants to be in the future."

FINANCIAL IZVESTIA TALKS BUSINESS TO 300,000 INFLUENTIAL RUSSIANS EVERY THURSDAY.

Financial Izvestia is an 8-page weekly business newspaper produced by the Financial Times in partnership with Izvestia, Russia's leading independent daily.

Printed on the FT's distinctive pink paper, it accompanies Izvestia every Thursday.

Drawing on the huge editorial network of both newspapers, it brings up to the minute, accurate, national and international news to 300,000 decision makers in Russia. News from around the world that impacts upon the Russian market, making Financial Izvestia an essential and unique business tool for those shaping the new Russia.

To find out more about advertising to these influential people call Ruth Swanston at the Financial Times in London on 44 71 873 4263 (fax 44 71 873 3428), Stephen Dunbar-Johnson in New York on 1 212 752 4500, Dominic Good in Paris on 33 1 42 97 06 21, Sarah Pakenham-Walsh in Hong Kong on 852 868 2863.

FINANCIAL TIMES
LONDON - PARIS - FRANKFURT - NEW YORK - TOKYO

The row over food ads directed at children is reminiscent of the tobacco debate, says Diane Summers

Sour taste of sweet debate

uring one typical week of children's television pro-grammes on Independent Television in the UK last month there were 388 advertisements, well over half of them for food products. Of these commercials, three-quarters were for hreakfast cereals (mostly the sugary kind), confectionery, fast food, soft drinks, ice cream and lollies. In 22 hours of children's TV, there was just one ad for fruit.

To the National Food Alliance - a campaigning umbrella group which includes such unlikely hedfellows as the British Dental Associatioo and the National Farmers Union the figures say it all. On Monday the NFA published the results of a Mori survey which claimed to show that three-quarters of parents think food advertisements do not encourage children to eat healthily. According to the poll, two-thirds of parents want to see tougher restrictions on food ads.

All advertisements for fatty and sugary foods should he hanished from programmes that large numbers of children are likely to view. says the group in a submission to the Independent Television Commission, the body which regulates

The Advertising Association, which represents both advertisers and the advertising industry, furiously described the survey as "a superficial and cynical attempt to steer the political debate about the Health of the Nation [the govern-ment's white paper on strategy for improving health published in July 1992] oo to advertising". Food advertising is not about diet hut about individual brands, says the association: "Brand adverts are not tools of social engineering, even if the NFA would like them to be."

The AA sees advertising as once again heing made the scapegoat. Many of the arguments, and certainly the level of emotion, are reminiscent of the debate surrounding tobacco advertising.

in turn, the association is launching the results of its own research at a seminar in Cambridge today. Conducted by Leeds University researchers, it concludes: "Rather than families seeing advertising as distorting the pattern of their children's eating, in fact, advertising is perceived as potentially positive in that it may encourage children to try out new foods."

The latest row was sparked by the government in March when it said of the bodies set np after the Health of the Nation white paper - would be taking an interest in advertising. The ITC and the Advertising Standards Authority, the body which polices printed advertising, were asked to scrutinise their codes of practice in the light of the white paper dietary targets.

These targets include a huge reduction in the consumption of fat. Diet, and in particular fat consump tion, is seen as a highly significant factor in the incidence of coronary heart disease and strokes, among the greatest causes of preventable premature death and disability.

The advertising industry was asked to look at how it could encourage positive use of the advertising message to promote dietary advice consistent with the Health of the Nation". Meanwhile, the ITC and ASA were to "identify any desirable changes" to advertis-ing codes, paying particular regard to advertising to children.

The ITC already applies some rules in the area: TV ads must not, for example, encourage children to eat frequently throughout the day, or to consume food or drink, espe-cially sweet, sticky foods, near bedtime. Advertisements for confectionery or snack foods must not

suggest they are substitutes for a balanced meal, and there are also restrictions on health claims that manufacturers are allowed to make. The ASA applies a similar code.

The NFA wants these codes strengthened to the point where ans for sweets and many snack foods would be banned from children's programmes and the 9pm 'water-shed' would be applied to ads for fatty or sugary food featuring, for

example, cartoon characters or toys.

The group points to the tougher restrictions applied in some other countries. For example, Canada. Sweden and the Flanders regional government in Belgium ban advertising to children during children's programmes, France bans use of children in food ads. Ads for sweets in the Netherlands, allowed after 8pm, feature a toothbrush logo to

remind children to hrush their teeth although, says the NFA, "the effectiveness of this has been questioned not just from a dental health perspective hut from the apparent endorsement such logos give to con-

fectionery products".

The AA replies that "the effects of advertising are hadly misunderstood. Advertising restrictions will not improve the nation's health". In its response to the government's Nutrition Task Force, it says: "A strategy for improved health is best addressed by a targeted programme of public eduction, encouraged hy public authorities and supported by food manufacturers and retailers."

The AA's research from Leeds University certainly highlights the extent to which public education is still needed if government targets are to be met. One of the most startling findings is that "nutrition" appears to he about the least important factor when it comes to planning the family menu.

The researchers concluded that planning, buying, preparing and cooking food account for 37 per cent of families' concerns, while whether the family would actually cat and enjoy the food accounted for a fur-ther 51 per cent. Nutrition and health accounted for 7 per cent and even then the subjects tended to be associated with specialised "health" foods and vitamin tahlets, rather than daily intake.

The exact role that advertising has to play in the process of mising public awareness - the AA maintains, self-effacingly, that advertising's role in these matters is always vastly overrated - is likely to remain a matter of controversy.

marketing. Drug companies are becoming less leery about advertising prescription medicines. Merck, for instance, began a campaign for its drug Proscar with general health messages detailing what every man should know about his prostate". More recently, however, the company has switched to advertisements which declare "Only one medicine can shrink the prostate: Proscar."

The public awareness campaigns as a marketing tool have proved so effective that other sectors are beginning to jump oo the bandwagon. Makers of calcium supplements, for instance, have sponsored commercials on osteoporosis, and one sunscreen manufacturer is expected to launch a campaign this summer on skin cancer and the dangers of exposure to the sun.

Why I holiday

s the British make their additional summer L pilgramage to the beaches of Spain, France and Greece, they leave belund a country mercasingly popular with tourists from elsewhere Britian is the world's sixth largest carner of tourist revenues. Last year, a record 19.4m overseas visitors spent £9.1bn m the UK

The conventional view is that foreign visitors come to the PK for its lustorical and cultural attractions. A new set of marketing guides* published by the British Tourist Authority reveals a more complex picture. Australians and New Zealanders fund British castles

gardens and historic houses appealing. Greeks, on the other hand, have no interest in such attractions: they visit the UK to shop, learn English - or underno surgery.

The BTA's 25 guides show that UK hotels and tour organisers. need to adapt their marketing to the country in which they and trying to sell their services. Behrian visitors like golfing, walking and cycling when they visit the UK. Norwegians like canal cruising, Argentines want

to watch rughy.
Visitors from Hong Koog do not like to walk. They enjoy pageantry but do not like rain. Many Israell visitors to London go to the theatre every night. Top attractions for Indian and Pakistani visitors are Madame Tussaud's and the Tower of London, Although a large proportion of Induit and Pakistanl visitors come to the UK on husiness or to see friends and relatives, there are increasing numbers of young, financially independent tourists from the two countries. Visitors from France tend to come to the UK to find eccentricity and cosy pubs.

A most subtle prescription

Drugs companies are using indirect methods, says Victoria Griffith

know about their health, the more industry promoted prescription drugs only to physicians. Today, drug companies find direct marketing to consumers more effective. "We try to empower people with information about their health," says Wyeth-Ayerst, "Earlier, people didn't really participate in their treatments. They just took what the doctor gave them. But now, patients are much more involved. awareness campaign on obsessive compulsive disorder to boost sales Drug companies have been

traditionally wary of directly of their new drug, Luvox, a relative promoting prescription drugs, because of strict Food & Drug Administration rules. The FDA

requires that all advertising of prescription medicines reveal potential side-effects and provide a balanced view of the benefits and disadvantages of the product.

Pharmaceutical manufacturers often provide money for the awareness campaigns to public health organisations, which then put oot information in the form of brochures, print and television advertisements.

"We're seeing more of this [contributions for public awareness campaigns hy drug companies] as opposed to traditional contributions over the last several

years," says Steven Erickson, a spokesman for the Arthritis Foundation. "There's more of a marketing element involved."

Yet public health organisations say they welcome the trend. "It's a win-win situation," says Brigid Sanner, vice president of communications for the National Heart Association. "We get the informatioo out, patients get a chance to live healthier lives and the drug manufacturers get their message out,"

Many health associations have established "corporate" offices to work together with companies

on the advertisements, which the associations then vet for accuracy and balance. The advertisements must contain

more than just information about the disease to be effective, though, says Nancy Glick, a senior vice president with the public relations firm Hill and Knowlton. "You need to provide basic information, hut you also need to tell consumers what they can do about it: either 'call this 800 number for more information', 'write for a hrochure on' or 'ask your doctor about'." Sometimes, the public awareness messages are followed up hy direct

CONTRACTS & TENDERS

Benchmarking services

The Inland Revenue is looking for a firm of consultants to assist in a four stage project to establish benchmarks for specific functions and implement two pilot schemes to match or exceed those standards. The successful firm will be part of a multi-disciplinary Revenue-led team. The contract will run for approximately 13 months starting in September 1994.

Companies that can clearly demonstrate relevant experience will be invited to tender in accordance with the 'contract notice' which is being placed in the Official journal of the European Communities.

For a copy of the contract notice, please phone Sasha McConnell on 071 438 6804.

Information required to the contract notice must be returned by 22 July 1994

FIND OUT IN THE WORLD'S TOP 1,000 BANKS LISTING.

The July issue of THE BANKER carries its annual survey of The World's Top 1000 Banks with a bank performance ranking of 1 to 1000.

Considered by bankers and financiers everywhere as the authoritative yearly ranking of banks, the Top 1000 carries up-to-date and definitive analysis unequalled by any magazine.

We analyse everything you need to know about banks; strength of capital; soundness of performance; profitability and size. If you need a senous, in-depth, independent and authoritative source of information on how good a bank really is, you need THE BANKER'S TOP 1000 issue.

Also in the July issue we focus on Japanese banks and their debt problems, and the impact of the liberalisation process on the Taiwanese banking system is also investigated. In Europe we assess what the Hungarian government must do to put the banking sector back onto its feet and how Greek banks are adapting to the changing European Market.

No senior person in the banking world can afford to miss out on the July Issue of The Banker.

To find out who the real winners and losers are in world banking, get the July issue -£5.00 from all principal newsagents worldwide.

erseyside bas been handed a two-edged sword. This week the European Commission approved outline plans to spend £628m of EU money over the next six years to help one of Britain's most deprived conurbations catch up with other more prosperous parts of

This is Merseyside's share of the EU's "Objective 1" funding for those parts of Europe where the local gross domestic product per head is less than three-quarters of the EU aver-Other beneficiaries include Greece, Portugal, ireland, the Highlands and Islands of Scotland and parts of the former east Germany.

The award does bring with it its own dilemma, as Mr John Stoker, head of the UK government regional office on Merseyside and the man who will be in charge of the money, points out. "Objective 1 is two-edged because you can interpret it positively or negatively." In other words, if an area needs such belp, that might put

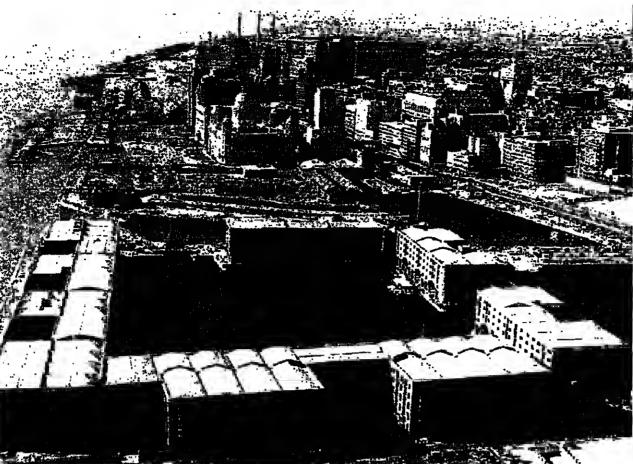

investors off.
Yet, if the resources are handled well, they could accelerate economic growth and create unprecedented business oppor-tunities, reversing the decline that has enveloped Merseyside

for decades.
The trick, as the conurbation's leaders recognise, is to cut with the right edge of the sword. Worried Eurocrats in Brussels rejected initial pro-posals. These would have involved the disbursement of funds on projects not dissimilar to others that have so far failed to stop the decline.

Training is one of these. Pro-

fessor Patrick Minford, Liverpool University's celebrated monetarist, has warned that soft-focus training - preparing people for jobs that might never materialise - is likely to encourage emigration in search of work, further weakening the skills base. He wants more spent on physical infrastructure, arguing that freer movement encourages trade.

Brussels called in Mr Peter Lloyd, professor of geography at Liverpool University, to redraw the spending plans. Among the people he consulted

principles involved, perhaps noting some signs that the tide may already be turning. As Mr Jack Stopforth, former head of economic development at the abolished Merseyside County Council and now a marketing consultant, observes: "The image of Merseyside is now lagging behind the reality. Before, we used to say Merseyside was great, and try to make it so. Now it's getting great but it doesn't look like it yet."

The membership and snbscription list of the Mersey Partnership - which will use Objective 1 funds to market the area worldwide - supports him. Councils and companies have contributed between £5,000 and £150,000 each to raise more than £1m. They clearly mean to make it work and seem to have learnt the lessons of what has produced successful regeneration else-

The lessons are that there have to be leaders; they have to sink their differences and work together, and they have to develop a wider vision of the community than their own role

There has been a telling influx of young or vigorous people into key positions. Many are newcomers, unconstrained by the great burden of Merseyside's past. They have a commonsense approach which

The main item on the constituent assembly's agenda is the removal of the successive presidential terms to allow President Carlos Henem to stand for re-election next year.

If all goes according to will allow re-election of the president to a second, fouryear term. At present, the president serves for a single six-year term. If Mr Menem wins the 1995 presidential elections, he will govern Argentina up to the end of would not be allowed to run for a third term.

As well as this, a number of other items are np for

• The indirect electoral college election system will be abandoned and replaced with a two-round direct election. If the winner gets more than 45 per cent of votes there need be no second round

Equally, if the winning candidate gets 40 per cent of the vote but leads the second candidate by 10 percentage points, there need be no second round. These elaborate rules were drafted bearing in mind the Paronist party's traditional 40-45 per cent share of the vote.

 A cabinet chief, a sort of prime minister, will become responsible for "general administration of the country" exercising powers "delegated by the president". The cabinet chief can be removed by both houses of Congress with a simple majority vote. The opposition Radicals bope this will reduce the president's powers, but Mr Menem has already said he will not cede full presidential

• The 48-member Senate will be increased by half. The extra 24 seats will be allocated to the opposition parties in each of the 23 prov-inces and the federal district of Ruenos Aires.

• The executive's legislative powers, principally the right to issue emergency decrees, will be restricted. The presi-

ast year President Carlos Menem's chances of fulfilling his over-arching ambition of removing the constitution's ban on successive presidential terms and standing for re-election to a second term looked remote.

Now, the constitution is being changed and already Mr Menem looks unbeatable in the 1995 elections.

Mr Menem achieved this by enlisting the opposition Radi-cal party - which had used its blocking minority of 84 seats in the lower house of Congress to prevent reform - as allies in amending the US-style 1853 constitutio

approved by the Senate. The Supreme Court is responsible In a deal last December with his old rival Raul Alfonsin, the for the management of the Radical leader and former president. Mr Menem agreed to a This amendment is mean to strengthen the indepenthat strengthens the judiciary dence of the courts, since and legislature and introduces indges are often appointed a semi-parliamentary form of for polltical reasons. A second term for Mr Menem creates as many doubts as it does certainties

further extend the horizon of political stability, allowing his free market reforms to consolidate themselves. Mr Menem has stated repeatedly that he will reappoint Domingo Cavallo as his economy minis-

However, many foreign executives would have preferred a Chilean-style transition in which the direction of economic policy has remained unchanged, in spite of two changes of government.

The core of the new constitution is contained in a Congressional resolution passed last December with a two-thirds majority with unanimous backing from Mr Menem's Peronist party and the Radicals. The resolution's text was drafted in secret by Radical and Peronist negotiators. The two sides agreed that an assembly elected in April to rewrite the

Mr Menem's chances of re-election look strong, says John Barham

No guarantee of stability

reject this reform package without any modification.

In addition to the reforms already agreed by the two par-ties, Congress has allowed the assembly to introduce additional changes such as introducing referenda or entrenching consumer rights in the consti-

Pollsters say that although the public shows little interest in the constitutional reform process, it seems content to allow a successful government to continue in office for a secand term.

However, a second term for Mr Menem creates as many doubts as it does certainties There are those who believe he will do little to strengthen Argentina's weak democratic institutions: no other president in Argentina's history has resorted to emergency decrees 308 of them in four years -The draft constitution is vague on congressional ratification of presidential decrees. It does not say whether Congress may even overturn decrees.

Successful economic reforms are the foundations of Mr Menem's political popularity. But Mannel Mora y Araujo, a pollster, warns thet Mr Menem may be making a serious mistake by believing that eco-nomic stability and growth are sufficient to satisfy voters. He says: "People want othar things. People have other pri-orities. The dominating themes today are unemployment, corruption, education, health."

However, few politicians are responding to these demands. The Radicals have been discredited by Mr Alfonsin's disastrous 1983-89 government and his alliance with Mr Menem. Mr Mora v Aranjo also notes a deepening contempt for conventional politics and poli-

These factors, plus a strong anti-corruption message, account for the rise of the Frente Grande, a loose coalition of left wing parties, dissident Peronists and environmental groups. The Frente is led by Carlos Alvarez, a charismatic Congressman. He says: "Our view is that most officials are part of a corrupt system and Menem allows and generates and approves of corrup- more akin to a by-election in

The Frente carried the federal district of Buenos Aires during the April 10 elections for delegates to the constituent

> Mr Menem's poor health has made the post of vice-president a desirable political prize

assembly and took 14 per cent of the national vote, finishing third behind the Radicals. Still, few analysts believe Mr Alvarez threatens Mr Menem's re-election. A diplomat com-mented that the elections were

which voters registered discon-tent. But in a presidential election they would probably cast their vote for Mr Menem.

There are those who wonds how Mr Menem would react to an economic downturn. Many fear his latent populist tendencies would come to the surface. A former minister says he wor-"authoritarian tendencies".

Mr Menem is given to lashing out at critics with incendiary statements. He has com-pared the opposition press to terrorists and bomb throwers. He has said human rights campaigners are "attempting to undermine the foundation of

reform the provincial public

sector, but until the private

sector [shows] strong demand [for labour], it is difficult to carry out. It will have to be

done simultaneously. Each

ments are the largest employ-

province reforms as it can."

armad forces. We will never again tolerate subversion in

our country". Neither is Mr Menem, in spite of his protestations, in the best of health. Last October he underwent emergency surgery to remove a blockage in carotid artery which carries blood to the brain. Mr Menem came dangerously close to an incapacitating stroke. It also emerged that he suffers from diabetes.

His deteriorating health has made the once unattractiva post of vice-president a desirable political prize, with several Peronists discreetly pressing their claims. However, Mr

Menem has said his running mate will be Eduardo Duhalde, his vice-president until his election as governor of Buenos

If Mr Menem were to disappear from the scene, his successor could change course abruptly. Mr Duhalde is a consummate machine politician with little attachment to Mr Cavallo's economic policies. Mr Cavallo's tight control over spending and unpredictable outbursts of fury have made him deeply unpopular in the govarnment. In May ba stormed out of a cabinet meeting shrieking that fellow ministers were conspiring against

Argentina's weak political institutions, further unsettled by the constitutional reform process, and its history of vio-lent, unpredictabla upheaval mean that Mr Menem's re-election does not guarantee that stability will continue.

THE PROVINCES

Prosperity is dwindling

Faw of Argantina's 23 provinces have benefitted from the past three years of vigorous growth. The backward northern region, bordering Bolivia and Paraguay is suffering as its traditional economies, based on sugar cane and tobacco, decline.

To the south, vast but sparsely populated Patagonia is seeing its population dwindle further as the oil industry sheds jobs, as it restructures and central government subsidies are cut off.

Even on the Pampas, Argentina's agricultural heartland, times are hard. Agronomists reckon that only one in five farms in the province of Buenos Aires are economically viable. Santa Fe. once one of Argentina's most vigorous industrial provinces, has become a rust bowl of obsolete industry and rising unemploy- ers. No governor can afford to

Mr aware of the dangers of allow-ing large regions of the coun-try to fall further behind the Cavallo is also targeting \$300m of federal spending on infrastructure in the provinces this year as part of a planned \$2bn, Already, the overcrowded slums surrounding Buenos Aires are swelling with five-year program.

Furthermore, privatised tele-phone, rail, port and highway operators are also investing heavily in the interior. More

efficient and cheaper infrastructure is reducing companies' costs as well as pumping money into the regions. However, the provinces have stubbornly resisted privatising their utilities and banks.

Governors complain that Mr Cavallo's largesse hardly com-pensates for the transfer to the provinces of responsibility for education and health that used to be handled by the federal government. But most of the governors are taking the extra money without keeping their side of the bargain and beginning reform. Provincial governments' spending rose to \$25.70bn last year from \$16.24bn in 1991, when Mr

on wages hit a record \$13.76bn

in 1991. An exasperated Mr Menem said the governors were "not administering as they should. They are not lowering public spending. They have not carried out public sector reform".

Yet his home province of La Rioja - which Mr Menem governed from 1983-89 in the timehonoured tradition of padding the public payroll - has done little in the way of reform. Even the local finance minister admitted La Rioja receives more than its fair share of federal transfers. Until the provinces' backward political structures are reformed, it is bard to see how Argentina can achieve balanced and sustainable

The 'drivers' of change

Merseyside's lagging economy has been approved by the European Commission, it was announced yesterday.

i diagrama

athu ang

The six-year plan will be the basis for spending Merseyside's £628m of Objective 1 funds. UK public sector sources will match the sum. The combined £1.26bn is expected to lever in more from the private sector. Under the plan there will be five main "drivers" of

 The hig-company sector. Projects will relate to preparing, servicing and accessing strategic sites for large companies and significant inward investors. Infrastructure spending, marketing and improving the region's image will also be covered

 Small and medium-sized enterprises (SMEs) will be encouraged to grow, with EU money helping to fund training, services and advice through TECS and Business Links. There will be a Merseyside Special Investment Fund. set up by the clearing banks but with EU money used to subsidise interest rates for

husiness loans. Knowledge-based industries will be encouraged, with special attention to technology transfer between Merseyside's two universities and industry, particularly SMEs. One idea is graduate retention programme with local industry to keep more people in the area

 The arts, cultural and tour-ism sectors will be encouraged. People-based initiatives will concentrate on training and systematic development of buman resources. Inner city and social problem areas, such as outer estates with high unemployment, will be espe-

cially targeted. Money will be cascaded into projects on a wholesale-retail sis. It will go in bulk to "eligible bodies" - such as local authorities, the three TECs on Merseyside, or the universities. Other "eligible" wholesalers

include Merseytravel, English Partnerships The Speke-Garston area and Merseyside may see a "21st century" funds directly, Development business park

Corporation, as well as volunrather than subsidising inditary sector and non-profit organisations, or other bodies acting in the public interest. vidual busine

English Partnerships (EP) is expected to play a leading role as the big-company driver. Mr David Taylor, the chief axecutive, says three main sites will be involved, headed by the Speke-Garston area near Liverpool Airport, where EP will commit £36m to develop what Mr Alan Chape, deputy chief executive of Liverpool city council says will be a 21st century business park. A new link road is already being built to put Speke within a few minutes of the motorway network.

Another EP investment site

will be Parkside colliery in St

Helens, which closed last year.

Many of the "people" initiatives will try to target training to upskill the workforce in johs, rather than just train unemployed people for stock. The three TECs - Merseyside in Liverpool, Cewtec in the Wirral and Qualitec in St Helens - will be the main whole-

salers of funds. As Mr John Stoker, head of government offices on Mersey-side, puts lt: "It's about jobs; it'a about enabling. It's a tall order, but Objective 1 has got to address fundamentals and make things better."

lan Hamilton Fazey

HIGHER EDUCATION

Campus is no longer remote

mushrooming anew in the heart of Liverpool it is higher education and its local turnover is almost 2000m a year

That is at least four times more than 10 years ago. Partly, it is the result of the expansion of higher education places and the metamorphosis of Liverpool Polytechnic into Liverpool ohn Moores University, but it is also the result of radical changes in attitude.

Merseyside has two universi-

first of the civic redbricks. What charactarises each of them is an obvious and vigorous sense of entrepreneurship. It was very different 12 years

ago, when Liverpool University often appeared trapped in its own precinct at the top of Brownlow Hill, quite literally a stone's throw from the 1981 Toxteth riots, from which It was insulated and aloof.

At the same time, the polytechnic suffered from the second-class status conferred ties - the new "JM" and the on colleges of its lik by local

authority control, fewer resources and a national, externally-controlled, bureancratic systam for validating its Today, Liverpool University

turns over £150m a year on its own, a third of it on research, with three-fifths of this latter amount discretionary money won in a tight marketplace from industry and various earch councils Liverpool JM has been rege-

nerating much of the elegant Georgian section of the inner city on its own. Originally a conglomeration

technical. "Our theme: partnership puters. The JM art and commercial col- with industry, commerce is already planand the community" ning a second leges dotted the

place, the dots are spreading, becoming blobs and coalescing, reversing the spread of a spotty dereliction that was threatening an over-

all, seedy decline. Professor Peter Toyne, who tresses his entrepreneurial orientation with the combined title of vice-chancellor and chief executive, has rescued a fine old terraced small mansion in Rodney Street - Merseyside's Harley Street - as the JM's headquarters.

"Vision is all-important," he says. "We are in the business of being a new kind of university. We have compacts with local schools and are trying to harmonise the area's potential. We cannot become a remote campus and we don't want to be. We are all over the city and

growing into it osmotically." He believes in out-reach and keeping access open to anyone who can benefit from higher education and pass the exams at the end. This means that although there are more than 10 applications for every place now, the JM has resisted the urge merely to move aca-

demically upmarket.

A few mature adults without conventional school-leaving qualifications can still get in if they can prove their ability in a rigorous interview. Admission tutors counsal other routes elsewhere, such as vocational courses, if they think an applicant might fail.

The JM has also modularised its courses so students can mix and match them over three or four years, studying in bites. This brings Prof Toyne to what he calls his "bite and mega-byte" philosophy, using information technology more effectively in education.

conventional library, but an architecturally impressive new 58m learning resource centre. This has been partly endowed by the Canadian-born Mr Aldham Robarts, one of the UK's pioneers of free newspaper publishing when he founded the Wirral Globe, initially an advertising freesheet, in 1973.

technology. However, the desire not to be content with a mix of low paid jobs in retailing, tourism, training programme have been leisure and construction aimed at reducing dole queues,

remains strong. The evidence for this is a drive to upgrade skills in all areas, rather than just trying to reduce unem-

> Mrs Linda Bloomfleid, of Merseyside Training and Enterprise Council, feels some criticism of the two main training

programmes has heen justified. Many believe the youth training schema and the employment

rather than addressing the long-term problems of skill mismatches between the job-

less and the jobs available. She says: "The employment training programme has been partleularly discredited. People were signing op for a few weeks, then Immediately going back to anemployment."

The replacement programme

- "Traiolog for Work"

- emphasises reskilling and tries to ensure proper placement for older long-term ucemployed people. Meanwhile, the programme of traloing credits for young people which has taken over from the

"The programme has been discredited. People were signing up, then going back to unemployment"

youth scheme stresses training and acquiring skills for both the employed and unemployed. Mrs Bloomfield says: "We start in the schools with 14-year-olds. We try to raise their orizons, make them believe

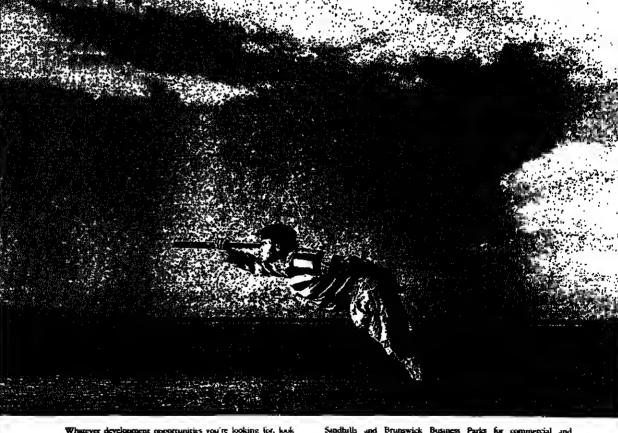

in themselves." School-leavers are given credits which will give them training that leads to a national vocational qualification. The trainlog credits programme is the largest scheme undertakea by Merseyside TEC, accounting for £20m of its £46m hudget.

At any given time, there are 6,000 young people on schemes. Last year, 36 per ceot left with some form of National Vocational Qualification, with a 42 per ceot increase in the oumbers reaching NVQ level three. Over 25 per cent went into a perma-

nent job. Mrs Bloomfield believes that activing Merseyside's chronic unemployment problem is beyond the remit of the three Tees - the other two are Qualitec in St Helens and Cewtec, which covers Chester, Ellesmere Port and Wirral.

"Overall nnemployment is 15 per cent against a national level of 10 per cent, but male unemployment in some pockets is 50 per cent. Merseyside will go on exporting workers," she says. "What we can do is contribute to making skills available so that the significant money about to come to Merseyside ntilises (the skills of the local population."

If you're looking for prime development opportunities, set your sights on the Mersey.

₹ be idea of making things in space still belongs to science fiction rather than reality. In spite of the scientific advantages of manufacturing outside gravity's reach, sending up the equipment is just too expensive.

But with the launch last week of a unique space laboratory to study what happens to materials when handled in microgravity the very low gravity environment in an orbiting spacecraft - progress towards the processing of metals, alloys, crystals and glass ontside the earth's pull could receive a big

The International Microgravity Laboratory, or IML-2, is dedicated to the study of life and materials sciences in microgravity. It was carried in the cargo bay of the US space sbuttle Columbia that took off on Friday.

The 14-day mission, the second in a series of international Spacelab missions, will carry ont 77 experiments to explore how life forms adapt to weightlessness and how materials behave when processed in space. The European Space Agency has provided half of these, the rest coming from the National Aeronautics and Space Administration in the US and space agencies in Japan, Canada, Germany and France.

The life science experiments will use biological specimens, from single cells to whole organisms, to study the effects of space radiation and microgravity on genetic material. growth, reproduction and bone development. The well-being of the astronauts will also be

The materials science experiments will cover areas such as metal alloys processing and the growth of crystals. These are of particular interest because the microgravity environment is free from such gravity-induced effects as convection and sedimentation. Normally, these limit the quality of processing and restrict the scope of studies into the materials.

It was back in the late 1960s that Nasa began materials ocessing in space (MPS). The first experiments were conducted during the return of Apollo spacecraft from the moon. followed by pioneering experiments on Skylab, the US pace station, in the 1970s. The bope was that space would contain factories of the future, producing miraculous new crystals and drugs and processing materials of supreme quality.

However, although research has proved that many products processed in space are of higher

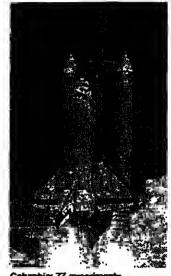

It needn't be.

It's called The International.

FINANCIALTIMES

Miranda Eadie on research into processing materials in microgravity

Making it in space

quality than those made on the ground, production in space is unrealistic economically. Transportation costs, at approximately \$100,000 (£66,000) per kilogram, are too high and the lead times too long to be of commercial interest.

Yet industry is interested in microgravity research. Although commercial processing in space is unlikely for at least a decade, the lessons from research in space can be applied in manufacturing on the ground, leading to improved industrial techniques and better materials.

To be considered for processing in space, materials have to be pretty special in the first place. They must have superior or unique properties compared with any rival material or substitute processed on earth; they must be key elements in a system for advanced industrial, medical or other high technology application; and they must have a high cost

INTERNATION

INVESTMENT

Transport/Tree

to weight (or volume) ratio. "What is needed to approach such a high risk activity as MPS are long-term industrial commitments supported by a strong national policy," says Hannes Walter, chief scientist for flmds and materials in the ESA microgravity programme. In Fluid Sciences and Materials Science In Space, an ESA publication, be says: "Progress in materials science and engineering stimulates the growth of many sectors of the economy. The access to new materials and processes results not only in qualitative improvements, it

frequently generates new technology."
For example, knowledge from research into microgravity has led to development of a casting process that produces even dispersions of lead or bismnth in aluminium alloys – which has applications in self-lubricating bearings. Germany's
Metallgesellschaft is testing these
for use in car engines with the
hope that reduced friction and

wear will cut fuel consumption

and pollution.

A new technique for making glass fibres used in transatlantic nunications cables was also first studied in space. In the original terrestrial method, the glass fibre constituents are meited in containers or crucibles. When heated above 1,000°C, the leading to contamination and a reduction in the glass fibres' space-perfected technique, containers are not needed - the constituents are held in levitation in an electromagnetic coil - thus avoiding contamination. Reductions in the loss of laser light (carrying voice and data traffic) in the glass fibres of up

to 10,000 times can be achieved Industry is also interested in space-processed material sample for evidence of their technical limits. Some companies want to know more about crystal growth, in particular protein crystals. Bumans are estimated to consist of 1m different proteins.

Understanding the three-dimensional molecular structure of proteins is necessar to understand many blochemical processes and for better design of therapeutic agents such as drugs and vaccine

Since materials are a key to technological progress and thus competitiveness, the IML-2 mission has an important role for industry. So even if the costs of manufacturing in space remain prohibitive for some years, research will go on.

n about two years' time, if all goes according to plan. Hong Kong will bave chalked up another first in the field of public transport. Not only will it have one of the only profitable public transport systems in the world but it will also be the most technologically advanced.

By mid-1996, Creative Star, a consortium of transport providers led by the colony's Mass Transit Railway Corporation, bopes to be issuing the first batch of 3m credit cardsized plastic "smart cards". The consortium - which brings together rail, buses, trams and ferries - represents one of the most comprehensive and biggest applications of smart card technology.

This system is being designed by ERG Australia, a Western Australia-based company which is a leader in the application of smart card technology to urban transport systems. The system to be intro-duced into Hong Kong will have initial capacity for 3m to 4m transactions a day producing annual revenues of around HK\$8bn (£660m) across all forms of transport.

RRG, which recently won the HK\$400m contract, is also advising transport authorities in Manchester, London and Melbourne about the application of smart cards to public transport.

Unlike most ticketing systems, which require the ticket to pass through a mechanical device, the secret to the smart card being intro duced in Hong Kong is that it does not come into contact with anything. A microprocessor embedded in plastic - which possesses the computing power of IBM's first personal computer - is activated when

passed over a "target" device. This davice powers the card and enables it to communicate with the target. Once a form of radio contact is established there is a two-way exchange of information between the card and the target. The card is identified and reports its remaining value; the target assesses if there is enough value in the card to enter the station. If so, it transmits date, time and station of entry. A similar process occurs at the end of a journey, with the cost of the fare being deducted on exit.

This process takes place within the twinkling of an eye - just a third of a second, The information passes down data lines (or by microwave communication for buses and ferries) to a "service provider central computer" owned by the railway or bus company, enabling it to know instantly the usage of routes and lines. This management information, which could be valuable to competitors, is stripped off before the raw billing data is passed on to a central clearing house. Creative Star totes up and distributes revenue according to usage.

The card is easy to operate. Cre-

Smart cards take to the streets

Hong Kong's public transport system is about to be revolutionised, writes Simon Holberton

ative Star makes much of the fact that a user need never take the plastic out of his or her wallet or purse. All a user has to do is pass it over the target to gain access to the station or bus. According to Brian Chambers, a technical manager at the MTRC in charge of the smart card project, the target's signal could be powerful enough so that it detects a smart card on a passenger without his doing anything.

"People could walk through the turnstile without touching the card," he says. "But Japanese research shows that people don't like the idea of a body scan. They prefer to take the card out and touch the unit. They feel a transaction has been executed."

be MTRC is also concerned about the potential possibili-ties for invasion of privacy inherent in the smart card. As the card is not disposable, users will have the opportunity of personalising their card with a photograph and personal data. This will allow identification of the card in case of theft. Anonymous cards will also be issued, although the ability of the

MTRC to cancel a stolen card and reimburse the lost money will be diminished.

We intend to hold the least amount of data possible," says Chambers. "We are endeavouring to make sure there is no link between what personal information we may have and the usage of the card. But if the card is lost what we want is some mechanism of cancelling the card and returning the unused

value to the customer. Creative Star bas set ERG a demanding specification for recharging the smart card. It wants to offer three methods of recharging. The first is conventional - take it to the MTRC window and pay the desired amount of cash. The other two methods, bowever, have the potential to make the card into a

cash equivalent. The first is to place the card into an automated teller machine and debit a bank account. The second is to establish a direct debit on a savings or current account. When the card falls to a specified level It is recharged (again to a specified upper level) on passing by a target. In this way, the introduction of

smart cards will not only herald the beginning of yet more convenience for the users of Hong Kong's public transport, but also the beginning of the end of small change.

If the executives running Creative Star have their way, people will use their smart card for transactions ranging from buying a newspaper or soft drink from a vending machine, to making a public tele phone call, paying for parking, buying fast food or sitting in a booth to have a passport photograph taken.

Rob Noble, director of marketing and planning at the MTRC, notes that the card is designed for large volume, small transactions. But in offering vendors of other non-transport products access to Creative Star's central clearing system, he says it will not be trying to compete with credit cards.

We're at the bottom of the market competing with cash," he says. "We see it as a convenience for customers. But the more cards in use, the more able they will be to use it for convenient things. We don't want it to be an MTRC card or a transport card, but ultimately a

PEOPLE

Higher and higher at Hyatt

Yorkshireman Hartley-Leonard sounds like a character ont of Kane ond Abel, one of Jeffrey Archer's best-selling novels. Just 30 years after he found a joh as a desk clerk in a Los Angeles Hyatt hotel, he has risen to be chairman of the privatelyowned Hyatt Hotels Corporation, which oversees 103 establishments in North America and the Caribbean. Hartley-Leonard, 49, who

takes over from Thomas Pritzker whose family owns the company, has managed hotels in Chicago, Houston and Atlanta. Pritzker remains president of the parent Hyatt Cor-

This must mean that western popular culture is undergoing an important new

if only. But if the large screen is raiding the small, it is no more than a twitch on a now well-established graph line. Where were these Eureka! critics while the skies were raining Batmans, Star Treks and Addams Families? In Hollywood, as we in the 1990s surely know, the sons and daughters of yesterday's couch potatoes are today's popcorn fodder.

The new TV adaptations, like the earlier ones, each take a once popular series that rejoiced in skimpy production values and give them the big-dollar treatment. And each trusts that a freshly campy approach to material that was already tongue-in-cheek will be hailed as the New Sophisti-

What we have in Maperick is two hours of the new smugness. The 1960s tele-series, starring James Garner as the poker-playing dandy with the wry, rictus grin and the six-gun concealed in his corset, was a noted insomnia cure in its own right: although today's critics are already canonising its halcyon charm. Maverick the movie kicks Mr Garner upstairs - into the role of senior gunfighter - while passing Mel Gibson the smirk, the suit and the stack of cards.

Can our hero win the ultimate

ing Red Indians, enemy gamblers, sudden guest stars (James Coburn) and thieving saloon beauties (Jodie Foster)? Not to mention all those slapstick fight scenes, in which every bullet or blow of fist solicits an audience chortle.

"It's not unlike the Lethal Weapon movies," Gibson has said in interviews: in case we thought that the film was based on exhaustive historical research. This Bret Maverick quips, smirks and doubletakes; he turns on and off the sudden violence; and he is directed by Lethal's very own Richard Donner

> MAVERICK (PG) Richard Donner

THE BEVERLY HILLBILLIES (PG) Penelope Spheeris

MA SAISON PREFEREE (15) André Techiné

> GYPSY (U) Emile Ardolino

RENAISSANCE MAN (12) Penny Marshall

with Lethal buddy Danny Glover popping up in a two-second bandit

Elsewhere we have a funny bit about politically correct Indians; a funny bit about a runaway stage-coach; and another funny bit about a sackful of rattlesnakes at a lynching. The problem with these firmy hits is that for the most part, as directed by Donner and scripted by William (Butch Cassidy And The Sundance Kid) Goldman, they are not funny. The only thing that held my attention throughout was Miss poker tournament to be held aboard the ultimate Mississippi steamboat? Lambs, I wondered, stretch her Can he get to the steamboat, past a

narrative obstacle course contain- role? Not quite. But unlike the res of the rheumatic reflex artists around her, she does try.

The press show of The Beverly Hillbillies saw at least one early walk-out from a critic, But who am I to wag a finger? I kept falling asleep. I dreamed that a jalopyful of peasants with twanging accents journeyed to Beverly Hills, after striking oil in the Arkanas backwoods, and became enmeshed in a chaotic plot about evil businessmen (Dabney Coleman), shape-changing secretaries (Lily Tomlin) and sud-den guest stars (Buddy Ebsen).

- that was the film? And there was I thinking I was still in Monerick; or that my dreams urgently needed a new scriptwriter. This film employed no less than four, none of whom seems to have been able to come up with an original comic moment. Jim Varney, Cloris Leachman and Diedrich Bader are among the Ozark-accepted muggers. And the director is the once-promising Penelops (Suburbia, Dudes)

Elsewhere in this non-improving week, you have a choice of female monuments. After watching Ma Saison Préférée and Gypsy on the same day – let us call it Black Mon-day – a terrible urge came upon me to swap the female leads.

The French film's glacial, torpid study of a brother-sister relationship riven by love-hate – be (Daniel Auteuil) is a tormented, philandering brain surgeon, she (Catherine Deneove) is a repressed public notary - would surely be livened up if we replaced Deneuve with Bette Midler? And Gypsy, a loud, stagy rehash of the Styne-Sondheim musical, might have a surreal charm if Hurricane Bette as Gypsy Rose Lee's all-singing, all-screaming stage momma were replaced by icecool Catherine.

She would delicately urge ber daughter to enter the lower depths of show business, invoking the cul-tural precedent of Toulouse-Lautrec

James Garner's smirk, suit and stack of cards is passed on to Mel Gibson (above, with Jodie Foster) in 'Maverick' the movie

or the fruitful existential anguish of Juliette Greco, Meanwhile Midler would be found somewhere in France, raising vocal hell: e ban-

shee let loose in the banileu. Instead the two stars stand around firming up the cliches of their respective vehicles. André Techiné's listless chamber drama embodies everything bad about modern French cinema. Its tasteful lesson in family tension, full of pinched-nerve emotions and pseudoprofundities, resembles a TV day-time soap rewritten by Andre Mal-

raux. And Deneuve is as elegantly dull as only she today can be. A coce expressive actress - remember Polanski's Repulsion? - is cow cast forever as the First Lady of French

If Hollywood had a star as inanimate as this, they would consign her to stand-in work for the Columbia torch lady. What France, in turn, would do with La Midler we can only guess. Position her, perhaps, at the eotrance to the Channel Tunnel as a warning to all French people going west: "Apres ça, le deluge." lo Gypsy Midler bawls, screams, wheedles, cries, laughs and occasionally sings. The rest of the cast, including Cynthia Gibb's pretty Louise and Peter Riegert's perky Herbie, are wiped out. For Midler in this form is not so much an actress: more an exploding barrage ballooo with teeth.

By default the week's best film is Renaissance Man, which in a good week might be the worst, Danny DeVito, failed advertising man turned supply teacher, instructs six bsckward army cadets in the

delights of Hamlet. They rebel; they hellraise; theo finally - what else -they knuckle down and come to love the Bard. By final curtain they have all turned into G. Wilson Knights and are changing the face of Shakespeare interpretation.

You have to love a film like this. It is foolish, seotimeotal, and as directed by Penny Marshall (Awakenings) earnestly inspirational. But at least it is oot based oo a TV series, does not star Mel Gibson and does not lean for support on a oncegreat diva past her prime.

Musical/Alastair Macaulay

She Loves Me

t is true to say that the 1963 musical She Loves Me, now revived at the Savoy, is by far the best musical in town, but it is not enough to leave it there. It is the kind of musical nobody writes any more; and it is all too possible that people today will be too sophisticated to take it seriously. Who cares about staff squabbles in a Budapest parfumerie and wo correspondents in a Lonely Hearts Club? Who cares about innocent charm? Well, thanks to She Loves Me, I do - and I am not alone. I would gladly swap the whole of Lloyd Webber and Sondheim for it. Its scale is miniature, but it is radiant with rhythm, vitality, and buman variety. No, it is not a great musical, but it is

exceptionally dear. Though there are several highly effective hits here for the leading four charac-ters, I believe that this musical's spell really lies in its ensembles. The action begins, so simply, with shop assistants arriving at work, singing "Good morning," "Good day," "Isn't this a beautiful day?" "How are you this beautiful day?" - which could be cloying, (the tyrics are by Sheldon Harnick), save that the words are so timed by Jerry Bock's music that their good manners become intoxicating. Somehow, Bock catches the rhythm of shop life and the way that assistants have to sup press their sincerer emotions behind the brio of salesmanship. Wonderful.

The music draws on a wide panoply of rhythms, and it is this, above all, that make Amalia and Georg (the two parfumerie assistants who do not realise that their anonymous Lonely Hearts correspondence is with each other) large to us. Not only them, but also Miss Ritter (who keeps falling for the wrong man) and even Mr

Kodaly (who makes a career out of being the wrong man for whom women fall) and their whole milieu, down to the ingenu delivery-boy Arpad. How judicious the way the emotionally perilous tango of the case where Amalia waits to meet her cor-respondent for the first time suddenly switches into a hysterical Viennese waltz as she sends Georg packing; how witty the way Miss Ritter's big number, "A Trip to the Library", begins as a bolero and then changes into a quickstep. The West End staging almost exactly

reproduces the 1993 Broadway revival, but the opening-night performance here was certainly fresher than the midweek-matinee I caught of the latter this February. One can find some fault with the two leads, though the audience certainly seems not to. As Georg, John Gordon-Sinclair not only carries no hint of the supercilious pride of which Amalia initially accuses him, he also overdoes the character's gaucherie; and, as Amalia, Ruthie Henshall tends to a certain bard-boiled glassiness around the smile, eyes, and high notes. He is dynamically a bit slack, and her singing would be more engaging if she did not squeeze into her vibrato and if she conceived each number with a surer sense of its overall architecture. A few of their numbers - notably "Tonight at Eight" and "Where's My Shoe?" - are too obviously choreographed for cute effect (rather than for emotional sincerity).

But the bright gleam of her voice is a rare pleasure in musicals today, and the freshness with which she inflects the lyrics ("Will wonders never cease?") is winning. She and Sinclair perform with exemplary manners as part of a larger able, and they catch both the pathos

An enchanting confection: John Gordon-Sinclair and Ruthie Henshall

and the comedy of their characters' situa-

The most successfully re-thought characterisation is Tracy Bennett's as Ilona Ritter. She not only catches just the right amount of caricature in this weary goodtime girl, she also packs her full of big-time vigour. In her "Library" hit, she delivers "He read to me all night long" on an ecstatic climax and immediately adds "Now how about that?" in a glowing murmur. adorably funny. Gerard Casey, David de Keyser, Simon Connolly, Barry James, and David Alder all contribute good performances. My only serious problem is with the exaggerated facial expressions of At the Savoy Theatre (671-836 8888).

Jon Peterson as the Busboy (much better played deadpan), and Robert Scott's some times slack musical direction. Scott Ellis's direction, Tony Walton's set, and Rob Marshall's choreography sometimes combine to make the show more neat and cartoonlike, and less touching than it really is. But the whole production has just enough poignancy and bags of flair. This musical has the kind of charm that others have been trying to banish from the genre for decades now. At its heart lies real

comic vitality: an enchanting confection.

hearthreak, as well as good manners and

Theatre/Martin Hoyle

The Country Wife

The Country Wife at Manchester's Royal Exchange Theatre dazzlingly summed up that decade's attitudes through the prism of Restoration comedy. Nicholas Hytner's strutting, rapping production portrayed a predatory jungle where people are commodities, where the innocent survive only by learning duplicity, and where the clowns in authority are not only buffoons but can be brutes as well. It worked. Above all, though it disturbed, the production's sheer swish, style and swagger were exhibitating. The Royal Shakespeare Company now brings what is, incredibly, its first Country Wife from Stratford (premiered last August) to The Pit. What does director Max Stafford-Clark see in the play for the sober and grimfaced 1990s?

Chiefly, sobriety and grimness. A visually conventional production (the only anachronisms are the modern-looking banknotes oiling the intrigue, and Horner's skin-tight Lycra breeches) has been decked out with a needless new prologue (by Stephen Jeffries) and songs by Ian Dury and Mickey Gallagher that are unnecessary to the point of embarrassment. And nobody seems to have told some accomplished actors how to play

This is glaringly apparent in the pivotal relationship between the over-protective Pinchwife, suspicious of Londoo's debauched society, and his naive spouse, a rustic fruit ripe for plucking. Robin Soans presents oeither a comically jealous clown nor a grotesquely possessive jailer but a well-spoken little man who at times seems the most reasonable person oo stage: a basically correct man whose virtue, taken to impracticable extremes, topples him At The Pit (071-638 8891).

n the mid-1980s a run of Wycherley's into social unacceptability. All comedy must be played straight, consistently and true to its context; but this Pinchwife is given oo context. Wheo he threatens to stab out his wife's eyes or "write whore with this pen-knife on your face" the words are neither frightening nor funny. since the character exists in a vacuum.

This is particularly hard on Debra Gli-

lett who in other circumstances might prove an outstanding Margery. Roundfaced and saucer-eyed, she makes a droll boy in her masculine disguise, and works hard to play her scenes as comic though often with no support from a partner who has apparently been directed otherwise. Pinchwife's new reasonableoess, in a

character usually depicted as a boor and a bully, naturally necessitates some adjustment in his rivals and competitors. The nearest thing to romantic interest. Har-court is played by Jonathan Phillips with a cold, calculating urgency that suits a conniving machiavel more than a dashing lover. Horner, the compulsive lecher, is not, by definition, moderate; but he should at least give some inkling as to his irresistible appeal to women. The excellent Jeremy Northam has incisiveness, intelligence, voice and physical presence, but nary a glimpse of charm apart from those Lycra breeches. And when the productioo comes up point blank against an inescapeably comic figure, it falls flat. The usually sensible Simon Dormandy makes Sparkish a stereotype fop. Such characters can be made to come to life: one thinks of the RSC's own Simon Russell-Beale. No, the 1990s, whether cynically disillusioned or thoughtfully caring, still await a zeitgeist production of Wycherley's great comedy.

INTERNATIONAL

FESTIVALS ■ BATIGNANO

This year's opera festival (July 23-Aug 12) includes performances of Don Glovanni. Details from Musica Nel Chiostro Santa Croce, 58041 Battignano, Commune di Grosseto, Italy (056-438096)

■ GLYNDEBOURNE

The new theatre has made a cracking start with La nozze di Figaro starring Reneé Fleming and Alison Hagley (final performance tomorrow), Graham Vick's new staging of Yevgeny Onegin with Yelena Prokina as Tatyana (finai performances tonight, next Wed and Sun) and a revival of Glyndebourne's classic production of The Plake's Progress in David Hockney's sets (July 16, 21, 27, 30, August 2, 5, 8, 11, 14). These have now been joined by a new production of Don Giovanni, staged by Deborah Warner and conducted by Simon Rattle, with a cast led by Gilles Cachemaille (July 17, 22, 26, 29, August 1, 4, 7, 10, 13, 16,

. .

19, 21, 24). Trevor Nunn'a 1992 production of Peter Grimes is nevived on July 31 with a cast headed by Anthony Rolfe Johnson and Vivian Tierney (0273-541111)

LUCERNE

Under Matthias Barnert, Switzerland'a premier music festival has taken on an adventurous siant. Focal points this year (Aug 17-Sep 10) are a 70th birthday tribute to Swiss composer Klaus Huber and a wide-ranging exploration of the way music is interpreted. Four different performances will be built around Schubert's Winterrelse, including a new opera. There will also be a series of officeat events breaking all the rules of traditional concert form. (041-235272)

■ MACERATA

This year'a operas are Carmen (July 16-August 11), La boheme (July 23-August 12) and L'elisir d'amore (August 4-13). The Bizst, conducted by Alain Guingal and staged by Gilbert Deflo, has changing casts including Denyce Graves/Lucia Valentini Terrani in the title role and Neil Shicoff/Fablo Armiliato as Don José. Glusy Devinu sings Mimi in the Puccini, and the Donizetti cast is headed by Valeria Esposito, Pletro Ballo and Enzo Dara (0733-230735)

MARTINA FRANCA

This year's operas (July 23-Aug 7) are Bellini'a La Sonnambula, Puccini's Le Villi and a rare hearing of Amor vuol sofferenza by 18th century Italian composer Leo

Leonardo, Detalis from Martina Franca Festival della Valle d'itria, Palezzo Ducale, 74015 Martina Franca, Italy (080-705100)

Founded by Norwegian violinist Arve lefsen in 1989, the Oslo Chamber Music Festival has quickly won a reputation for conviviality and musical quality. Concerts take place in churches, castles and concert halfs around Oelo, with each year'a programme focusing on a different country. This year (Aug 5-13) is Britain's turn, with music ranging from Byrd and Bridge to David Matthews and Oliver Knussen. The Nash and Hilliard Ensembles are taking part, while Truis Mork will play Elgar's Celio Concerto and Yuri Bashmet gives a viola recital (2255 2553)

■ PERALADA The gardens of this Catalan castle north of Barcelona are the setting for an annual festival of opera, dance and concerts. This year's programme (July 29-Aug 23) includes a song recital by Katia Ricciarelli and productions of Rossini'a il Turco in Italia and Stravinsky's The Soldier's Tale. Details from Festival Internacional de Musica Castell de Peralada, Pere de Montcada 1, 08034 Barcelona (03-280 5868)

■ PESARO

This exquisite walled town on the Adriatic was Rossini's birthplace.

Each year it brings together genteel lovers of the Italian maestro's music, who come to explore some of his lesser-known operas, alongside bucket-and-spade beach-goers. This year'a programme (Aug 11-29) includes a new production of the one-act dramma giocoso L'inganno felice, staged by Graham Vick and conducted by Carlo Rizzi; a revival of the 1992 production of Semiramide, with Roger Norrington making his Pesaro conducting debut; and L'Italiana in Algeri starring Jennifer Larmore (0721-33184)

RAVENNA This north Italian town is Riccardo Muti's home, and he has become the main force behind the annual festival. He will conduct a staged production of Norma with Jane Eaglen in the title role (July 16, 19, 21 and 23), and also Verdi's Requiem on July 20 and 22 (0544-32577)

SANTA FE

Graham Vick's new production of Die Entführung aus dem Serall opens on Saturday. This year's other new productions are Tosca, directed by John Copley, with Mary Jane Johnson in the title role (continuing till Aug 27) and il barbiere di Siviglia directed by Francesca Zambello, with Delores Ziegler as Rosina (till Aug 26). Zambello also produces the American premiere of Judith Weir's Blond Eckbert (July 30-Aug 12). Göran Jarvefelt's 1984

and Dale Duesing as the Storchs. And the pleasures of the place itself never pail (505-986 5900)

production of intermezzo is revived

on July 23, with Sheri Greenawald

■ SAVONLINNA No one who visits Finland's premier

summer festival can fail to be Impressed by the stone castle courtyard in which it takes place. Poised on the edge of a lake, Olar's Castle (Olavinlinna) is an outstanding outdoor location for opera. The 1994 programme, which opened last week, is one of the least distinctive of recent years, with revivals of last year's successful production of Verdi's Macbeth (till July 19), the evergreen Die Zauberflöte (final performance tomorrow), and a visit from the Hungarian National Opera. One of the more eve-catching events is a student production of Yevgeny Onegin in the final week. The festival runs till July 30 (057-273492)

■ TORRE DEL LAGO

The open-air Puccini festival near Viaregglo on the coast of Tuscarry runs from July 23 to Aug 13, and includes performances of La fanciula del West, Turandot and La boheme (0584 350567)

■ TORROELLA DE MONTGRI

Torroella de Montori is a small Catalan town six km from the sea on the Costa Brava, but it is not primarily a tourist resort. The town architecturally typical of the Empordà, and is set in beautifully natural surroundings. The summer music festival, continuing till August 26, mixes Spanish artists of the calibre of Glacomo Aragall and Jordi Savali with international guests such as the Franz Liszt Chamber Orchestra and the Choir and Orchestra of the St Petersburg Capella (072-761098)

TANGLEWOOD

For more than 50 years, The Boston Symphony Orchestra's summer home has provides a relaxed setting for concerts in the Massachusetts countryside. This weekend's concerts are conducted by Mariss Jansons and Seiii Ozawa, with soloists including André Watts, Midori and Peter Serkin. The festival runs till Sep 4 (Ticketmaster Boston 617-931 2000 Western Massachusetts 413-733 2500 New York City 212-307 7171)

■ VADSTEJNA

Vadstejna'a opera festival takes place in the historic buildings of this medieval town 250 km south-west of Stockholm. The second production this year is The Various Adventures of Mrs Björk, a tragi-cornedy by Swedish composer Staffan Mossenmark based on a novel by Jonas Cardell, from 28 and runs till August 12. There will also be an opera gala in the Vadstejna Castls courtyard on August 7 (Tickets 0143-10094 Information 0143-12229)

Will the real Jacques Delors stand

Jacques Delors admitted on French television that he was rather flattered hy all the REVIEW fuss surround-ing the choice of his successor as president of

the European Commission. As well he might be. Last month the UK government paid him the tribute of declaring that so important had Delors made the presidency of the European Union's executive that it was ready to risk a serious row with its European Union partners over who

should fill his shoes. And it is a British journalist who has paid him the compliment of writing the first serious book about him. Some skimpy tomes about Delors have appeared in France, but none is the Compleat Delors that Charles Grant has produced. It is, of course, Delors' decade in Brussels which has made him famous, and on which Grant, as former Brussels correspondent for The Economist, might have been expected to focus most. But Grant has also delved meticulously into Delors' French upbringing and political career, and served up a mixture of personal juice and intellectual fibre that makes for a most satisfying meal.

What most intrigues Grant, and Delors' friends and enemies, are the man's contradictions. "He is a socialist trade unionist who once worked for a Gaullist prime minister and who describes himself as a closet Christian Democrat. He is a practising Roman Catholic who takes moral stances and claims not to be ambitious; vet he is a crafty political tactician who enjoys power and has held the Commission in an iron grip. Ha is a patriotic Frenchman with a vision of a unified

Europe." Thus, one face of "Janus" Delors is genuine modesty - he was the only socialist minister in the early 1980s to live in a working-class part of Paris, and as Commission president he sometimes takes meals with his chauffeur and bodyguard. His other visage is that of the haughty Eurocrat, telling national governments in 1988 that "in 10 years' time 80 per DELORS: Inside the House that Jacques Built By Charles Grant Nicholas Brealey, £12.99, 310 pages

for more R&D spending, and

contrasts that failure with the

success, largely unwelcome to

Delors, of the tougher EU com-

petition policy that Sir Leon

Brittan and Peter Sutherland

imposed. For the most part,

however, Delors and his

"mafia" got their way in Brus-

sels, frequently riding rough-

shod over others. Grant finds major fault here. "By the end

of his reign. Delors' personal

system of command and con-

trol had begun to damage the

Commission's internal organi-

sation, sap the enthusiasm of

its officials and contribute to

the tarnishing of its image." If

that sounds a hit like Mrs

Thatcher's eventual impact on

her own government, Grant

intends it to be so. For, in a

comparison nalther would

appreciate, he likens Delors to

Thatcher in his "attention to

ideas and implementation, to

ideology and to detail, to orin-

How does Europe stand after

Delors? Grant, perhaps wisely, offers few predictions, except to say that Delorism/federalism

will live on to do battle with

four horses and a chariot".

So will Delors chance his

election campaign.

ciple and power".

tricht treaty.

cent of their economic legislation will come from the EC", or telling French opponents of Maastricht in 1992 to "get out of politics". Such careless outhursts contrast with Delors' extraordinarily careful approach to important European negotiations.

Moat of Delors' main achievements are well known keeping France, when he was its finance minister, within the European Monetary System; playing a leading role in pushing through the 1986 Single European Act and increased use of majority vot-ing that paved the way for Lord Cockfield's single market programme; and the launching of the move towards economic and monetary union (Emu).

Grant is very revealing about the way that Delors has always paid court to Germany in general and to Chancellor Kohl in particular, though one German, Karl-Otto Pöhl, the former president of the Bundesbank, now regrets he sat on the Delors' committee whose 1989 report paved the way for Emu. "If I had hoycotted [the committee], I could not have stopped the process but I might have slowed it Pöhl has since told

But this book also usefully recalls two other achievements. One is how Delors, by pushing through his EU hudget packages of 1988 and 1992, has spared the Union, up until 1999, the mind-numbing arguments over money that prevailed before 1988. The second is the European Economic Area (EEA). Delors' aim in proposing this extension of the single market was to discourge a rush of members from the European Free Trade Association applying to join the EU as full members. In this, he did not succeed. But should the Nordic countries fail this year to get their peoples to approve EU membership, they will at least have the EEA to fall back

On the minus side, Grant records Delors' disappointment in not getting the EU to adopt

lgeria's embattled military regime today faces its most serious test since General Sani Abacha seized power last November.

In the high court in the capi tal of Abuja, Moshood Abiola, millionaire husinessman and victor in last June's annulled presidential poll, will mount his latest and most public challenge to the soldiers' authority.

Last month Mr Abiola, com fortable winner in elections intended to return Nigeria to civilian rule for the first time since the military took power in 1983, defied the government and claimed the presidency.

Arrested shortly after a spell in hiding on a charge of treason, Mr Abiola, a southerner whose Moslem faith gave him some standing in the predominantly Moslem north, will today seek bail. Few observers think he will

be successful. But from the

public platform of the court. Mr Abiola's lawyers may turn the occasion into what amounts to a rallying call for opposition. His legal plea could strain the stability of Africa'a most populous nation, the world's sixth-largest oil exporter, and Europe's largest trading partner in sub-Saharan Africa apart from South Africa.

Already a sympathy strike

by workers in the oil industry is gathering pace and may spread to other unions next week, but the strains go wider and deeper. The crisis is not just over a millionaire's ambition, or over soldiers clinging to power. After 34 years of independence, three new constitutions and half a dozen military coups, Nigeria has yet to develop a stable system of gov ernment which adequately shares the power and wealth derived from exports of 1.7m barrels of oil a day among more than 200 tribes and 90m

The crisis is about Nigeria's capacity to govern itself, and manage its recovery from an economic decline as steep as any on the continent. External debt exceeds US\$34bn, and is rising at a rate of \$6bn a year. An economic reform programme launched with the hacking of the International Monetary Fund in 1986 had begun to falter by 1990. When the January 1994 hudget introduced a fixed exchange rate, the main pillar of reform - a market-driven exchange rate was abandoned.

Meanwhile, the spectre has arisen of religious and ethnic rivalry between the largely Christian, Yoruba-dominated sonth, and the predominantly Economic pressures are building as Nigeria ponders its constitutional future, says Paul Adams

Well-oiled, but still creaking

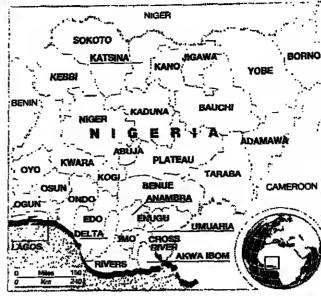

Moslem, Hausa-Fulani north. Whether these economic and political strains can be colved depends partly on the outcome of proceedings under way not far from the high

court in Abuia. Some 360 delegates have gathered nearby at a constitutional conference initiated hy the government and with a qualified mandate from Gen Ahacha to define a path to mocracy by the end of October, subject to the military's approval. About 270 of the delegates were elected in ill-prepared polls in which few people voted, and the rest were nominated by the government to debate the country's consti-

Mr Abiola and his supporters say the answer is simple; hand over power to the man who won the only presidential election since civilians were ousted m 1983. For the past decade there has been a constitution, hut governments have ignored it, they argue.

tutional options.

They charge that the conference has no real power, is unrepresentative, needs only a third of the delegates to make a quorum and will be manipulated by the military to produce the result the regime wants. Much will depend on the skill of Mr Sylvanus Karibi-

Whyte, a judge who has been seconded from the United Nations commission on war crimes in former Yugoslavia to chair the conference.

According to government advisers, the military wants three issues resolved at the gathering: last June's election: a formula for the distribution of revenue among the states of the federation; and the role of the military in Nigeria's future

he government hopes the conference will give legitimacy to the transition to civilian rule it is due to announce next year, when the ban on political parties is lifted. It also hopes to appease the US and the European Union, which have imposed limited diplomatic and military measures against continued military rule.

The conference could also be a way for the government to neutralise support within the armed forces for the Lagosbased national democratic coalition which championed the cause of Mr Abiola

But no clear direction or lea dership is likely to emerge from the wide range of interest groups represented at the conference. Among the delegates are sacked ministers, retired

Government sources say the regime is ready to concede a greater share of revenue to the oil-producing states to pacify their angry citizens who object to seeing most of the oil wealth go north or west. "We do no see it as just a north-south issue," says a newspaper publisher from the east. The ben efits between east and west are lopsided. Senior government posts are loaded in favour of

Yorubas. Others accuse him of

only supporting democracy when it suits him. The presidential candidates who were banned by former President Ibrahim Babangida in 1992 are also hostile to Mr Abiola. They hlame him for falling to speed

hlame him for failing to speak out against the ban in his Con-

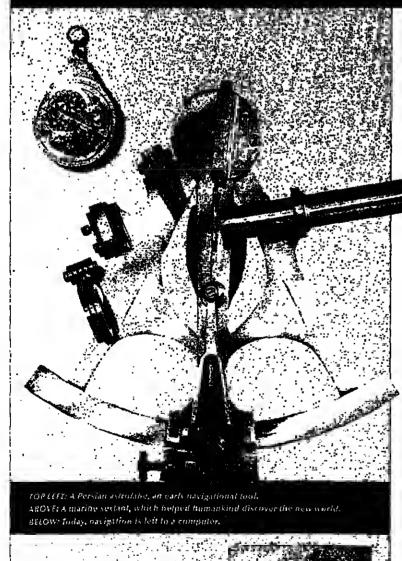

cord newspapers group, shortly before he put himself forward as a presidential candidate.

"Nigerians' conception of the state is that of a national cake, in which all sections have to partake in the sharing, otherwise their area will be neglected," according to Mr Shehu Musa, a member of the civilian government in the early 1980s and now a member the commission which helped to set up the constitu tional conference. "Political office has therefore produced a set of emergency millionaire whose main preoccupation in office was to loot the treasury and divert all development pro jects to their kinsmen," he sald in a speech earlier this year. This observation goes to the

heart of Nigeria's predicament Its civil service is inefficient and demoralised, its educational institutions neglected its youth disillusioned and its civilian leadership weakened and divided by regional, ethnic and personal rivalry.

In short, Nigeria will have to overcome its chronic institutional weaknesses if it is to manage its recovery from a protracted decline. Nothing that will happen in Abuja is likely to change this.

Wrong route to reduce unemployment

Sir, With reference to your reports ("The Group of Seven summit", July 11) on the G7 summit in Naples, I very much welcome the fact that measures to hring down unemploy-ment have at last been placed high on the international agenda after being spurned repeatedly during the Reagan-Thatcher years. Some of the G7 proposals for job creation are also to be applauded. However, I am concerned that so much emphasis is being placed, at least by the British govern-ment, on deregulation of the labour market as a means of achieving reduced unemploy-

labour market rigidities, lower does not produce results. More-indirect employment costs and over, the evidence is that aboilfewer regulations" can be

translated as lower pay, more precarious employment con-tracts, worse health and safety and a weakening of social security. If the UK government hopes to convince the world's most advanced economies to adopt the path of deregulation as a means of creating jobs, its track record must surely undermine its credibility. After 15 years of deregulation, privatisation, anti-union laws. reduced employment rights and the growth of low pay, we have 3m unemployed compared to 1m in 1979. nent. The low pay, low skill, low All the talk of "reduced productivity option simply

tion of the wages councils last year has produced lower pay; it has not produced more jobs. Perhaps politicians should reflect on three things before pursuing this argument: 1. The aim of economic activ-

lty is to produce decent jobs and a good standard of living it is not an end in itself. The most successful countries have combined economic success with steadily improving social and employment conditions.

2. How far would standards have to be lowered in Europe so that we can compete on labour costs with Taiwan, Korea and China? 3. Surely, one of the higgest

imaginativa than their propos-als in Naples suggest if they are to break through this vicious spiral of debt and pov-Bill Morris, general secretary, Transport and General Workers Union, Transport House. Smith Square, London SW1P 3JB

3i subscription rate implies good judgment From Mr Jon Moymihan.

Sir, In a somewhat odd article ("Exco issue more than three times subscribed", July 12), Simon Davies appears to be implying that Exco's new issue on Monday was very successful, because it "was 3.2 times subscribed", whereas 3i's flotation last week was less successful, because it "was only 1.1 times subscribed". This point of view, apparently quite widely endorsed in recent newspaper comment, misunderstands the purpose of a flo-tation or rights issue, which is

new shares issued for pre-issue shareholders of the company. Since a greater than three times subscription means that, almost inevitably, one third of those subscribing (all that was needed) would have been prepared to pay a higher price for the shares, we may deduce that the Exco offsr was at least

to gain maximum value for

ting top price for its sharehold-On the other hand, a 1.1 sub-

scription rate implies that 3i and its advisers, far from being unsuccessful, judged nicely (even if possibly somewhat too finely) the highest price they could get. The reason financial advisers

are paid so much by their clients in these transactions is because they are expected to judge well the highest price possible, commensurate with full take-up. So it is clear that, on the only objective evidence available, 3i and its advisers have done extremely well, and Exco and its advisers not so well, for those for whom this exercise was conducted - the pre-issue shareholders of those companies. 'Jobs for life' were never the norm for Japanese

From Dr Malcolm Trevor. Sir, It is unfortunate that the myth of "lifetime employment" has been trundled out again in the FT ("Fujitsu staff go it alone", July 12). Even in big Japanese companies it has never applied to the large num-ber of temporary and part-time employees, who can be fired at any time. Small and mediumsized companies may revere it as an ideal, but cannot afford it some 70 per cent of employ-

ees work in such companies. Far from heing the norm, 'lifetime" employment, which even some Japanese companies are trying to rename "long-term" employment, probably applied to no more than 30 per cent of all Japanese employees at most - including those in government offices, in other words, only a minority has ever enjoyed the job security that it offers, at a price. In the present recession,

such large companies as Pio-

neer and TDK are making "per manent" staff redundant, while others are reducing the compensation of those who will not take early rstirement. SME employees must, as usual, take their chances in an external labour market that is even

harder than before. Whils not denigrating the significance of "one career" employment in the large corporations as an instrument of control and as an ideology or idea with considerable emotional pull, the fact is that this practice, which has only ever applied to those at the top of the pile, now applies to even fewer. While it would be an exaggeration to predict its total disappearance, a growing muniber of companies is finding it increasingly unrealistic. Malcolm Trevor, 204 Manoir Furukawa, 19-1 Funagawera-machi, Ichigaya, Shinjuku ky,

Panel concept a useful first step to restoring shareholder purpose

Sir. The shareholder panel concept outlined in the article,

'With strings attached" (July 10), will doubtless be feared by die hard captains of industry as the thin end of the Teutonic wedge in the shape of the supervisory board. Yet Professor David Hatherley's suggestion would bring the sort of informed and responsible ensure that elected manage-

involvement from a company's owners that would elude any centralised and hureaucratic audit commission.

Shareholders are the only people properly positioned as the source of ultimate authority and legitimacy of the corporate form, yet few understand that along with shareholder rights come the ohligation to

Politicians and civil servants

The British civil service is justly ing standards. A greater interfamed for its impartiality and change between the public and objectivity. Such qualities are essential both in the task of administering public services fairly and in providing high-quality advice on policy matters to ministers. Yesterday's white paper on continuity and change in Whitahall must therefore be largely judged by the degree to which it preserves a non-political civil service that can serve gov-

13.5 d Adams

> ernments of any persuasion.
>
> Much of the white paper contains good sense, extending to Whitehall the sort of management reforms already imposed on public services, such as health and education. Departments will be expected to improve the quality of the services they provide, with higher performance targets set each year as part of the Citizen's Charter. They will have to achieve these higher etandards with frozen running cost budgets, putting strong pressure on managers to strive for

> To help them reconcile these conflicting demands, permanent secretaries are to be given much greater freedom to manage. Departments will take responsibility for the pay and grading of for more than half of civil service costs. The cash-based Whitehall accountancy system is to be replaced by resource-based accruals accounting, to improve the management of current and capital resources. Managers will be encouraged to draw on a range of management techniques, such as market-testing, benchmarking and process re-engineering, to raise their efficiency and effectiveness. Less day-to-day interference is promised by the central depart-ments, the Treasury and the Cabi-

Best practice

In principle, such reforms are welcome. They reflect best practice in the private sector. They have improved the quality of service in other parts of the public sector and may be expected to do the same in Whitehall

Also to be welcomed are the proposals to open the upper echelons of the civil service to outsiders. The top managers in Whitehall who have come from business or other parts of the public sector have contributed much to improv-

private sectors is desirable, and will be assisted by the advertising of top jobs. At the same time, young civil servants with ambitions to reach the top will be encouraged to acquire experience outside Whitehall.

The most controversial proposals in the white paper are those for putting some 3,000 top mandarins on personal contracts. The government has sensibly decided against short-term contracts that would inevitably politicise the civil service. But it has opted for indefinite contracts which spell out the rights and responsibilities of top mandarins more clearly. The carrot is higher pay for those thet perform well; the stick is premature departure for the under-

Increasing pressure

The white paper says that such contracts will put them on a par with their counterparts in other walks of life. That may be so, but it is not difficult to see undesirable consequences flowing from increasing pressure on civil servants to satisfy the demands of their political masters. Mr William Waldegrave, the donnish public services minister whose white paper it is, may welcome robust challenges from his civil servants. But other ministers appear less tolerant of intellectual dissent, as the recent premature departure of two high-flying permanent secre-taries indicates. And there is no doubting the unhappiness among many senior Home Office mandarins over the home secretary's unwillingness to listen to evidence that casts doubt on the wisdom of his criminal law reforms.

If this reform is to go ahead, an independent appaals body is needed to which civil servants can turn if they feel they have been badly treated by their ministers. The present system of internal appeal np the management chain. ultimately to Sir Robin Butler, the head of the civil service, is inadequate. The fact that only one case has ever reached Sir Robin indicates that civil servants have little confidence in the procedure. If the public is to be assured that the government's shake-up in Whitehall will not politicise the civil service, a genuinely independent appeals body is essential.

Menica's near abroad

When 2,000 US merines are stationed off a Caribbean country "to protect American personnel", that country should know what to expect. Signals from Washington suggest, more concordantly than usual, that the countdown for an invasion of Haiti has begun.

At first sight this seems strange. Why should President Clinton decide on an invasion now, after 18 months of ducking and weaving and contradicting himself? A substantial majority of Americans opposes military intervention in Haiti. So do the Pentagon, at least part of the State Department, most of the Republican party, most other Caribbean and Latin American governments, many of the Americans still resident in Haiti whom the marines would ostensibly be protecting, and - in public, anyway - the ousted Hal-tian president whom an invasion would restore to power. Almost the only voices calling for an invasion are those of the black caucus in Congress and, increasingly, the inhabitants of Florida who fear an invasion of their state by Haitian refugees.

Already UN sanctions, imposed in May at the US's request, have cut off all legal commerce with Haiti and paralysed the economy of what is anyway the poorest country in the western hemisphere. Should these sanctions not be given "time to work" before a resort to force?

Sanctions argument

That argument, familiar from the build-up to the Gulf war, does not take account of the way that sanctions "work", if and when they do. Rarely if ever do they succeed on their own in persuading a government to change its policy, or even prompt its supporters to overthrow it. What they can do is to disorganise and demoralise o regime, gradually reducing lts will to withstand a violent onslaught from within or without. In Haiti's case they have produced a renewed exodus of refugees. In the past the US sought to label these as economic migrants, in order to avoid offering them asylum. Now it attributes their flight to human rights violations. The latter are real and numerous, but there can be no doubt that destitution aggravated by sanctions is also a potent factor.

The US is desperately building temporary housing for the new refugees at Guantanamo, its naval enclave in Cuba, and seeking "safe haven" for them in other Caribhean countries, whose populations do not want them any more than Florida does. Mr Clinton cannot afford to let this crisis escalate indefinitely. Nor can be revert to a more conciliatory policy without making himself a complete laughing-stock. He has boxed himself into a situation from which invasion may be the only way out.

Popular enthusiasm

If it comes, it will probably be greeted with initial popular enthusiasm in Haiti. It will no doubt succeed in removing the three top military leaders and restoring President Aristide to office. But if it stops there, it will leave Mr Aristide with the problem that faced him before his expulsion in 1991: implacable opposition from the military and the ruling elite. Only a much longer occupation, which would purge and disarm the police and army down to NCO level and encourage the educated Haitian diaspora to return to the country, with a coordinated package of economic and technical aid, would give Haiti any real hope.

The US tried something like

that in 1915, stayed for 19 increasingly bitter years and last the country little better off at the end of it. This time, following e precedent set in Somalia and now followed by France in Rwanda, It is looking to other countries in the hemisphere to relieve it, under UN auspices, once the initial, dra-

matic phase is over. There might indeed be a case for making Haiti a UN protectorate or trust tarritory, as there would have been for Bosnia and might be for a dozen or more "failed states" in various parts of the world. There is certainly a case for any intervention being carried out under UN auspices rather than hy a great power acting alone - if only because of the dangerous precedent that the latter would set. But the chances of an invasion being followed through with sufficient generosity and clarity of pur-pose do not seem good. There is still time for the Haitian junta to realise what is about to hit them, and to hand over power voluntarily before it does.

speculators a taste of blood.

ECONOMIC VIEWPOINT

It's the yen more than the dollar

By Samuel Brittan

ways of demonstrating this fact. One of the most illuminating is to look at the track record of the dollar against the D-Mark.

In the early and middle 1980s, it was violently unstable. But since the much-maligned Louvre Agreement of early 1987, the exchange rate between the two currencies has rarely strayed more than 10 per cent on either side of DM1.6 to the dollar. Indeed, the dollar's rate against the D-Mark was more favourable the day after last week-end's Naples summit than it was et its 1990, 1991 and 1992 low points.

The relative stability of the dollar against the D-Mark thus suggests that the problems have come from the yen side. This is confirmed by looking at the yen's movement against the dollar, which is marked both by medium-term instability and a strong trend in favour of the yen and against the dollar.

An alternative way of showing the yen's strength, not involving the dollar at all, is to look at the yen/D-Mark exchange rate. This important, but neglected, cross-rate shows the D-Mark falling from a high of more than Y90 at the beginning of 1991 to a low of less than Y60 this year. The move can be seen as a 50 per cent appreciation of the yen, or a 33 per cent depreciation of the D-Mark. It has undoubtedly helped Germany to competa in world markets despite a post-unification upsurge in domestic costs. These conclusions are confirmed by the trade-weighted indices. Contrary to popular impression, there has been little trend either way in either the D-Mark or dollar index in the last three and a half years. The yen, on the other hand, has shot upwards, although it previously reached something near to its present level in the summer of 1993. Jepan has had lower inflation than the other G7 countries, but the discrepancy has not been nearly enough to offset the rising yen.

One can argue how far US monetary policy needs to tighten, but Japanese monetary policy should loosen further

Profit margins have been squeezed and export prices have fallen severely in yen terms in 1993 and 1994. Yet whatever yardstick is chosen, the yen has had a large real, as well as nominal, appreciation in the last few years.

This appreciation has undonbtedly contributed to the severity of the Japanese recession. The retardation of gross domestic product has to be judged not just in relation to other countries, but in relation to the much higher trend previously seen in Japan.

If one looks at industrial produc-

tion, such analytical contortions are unnecessary. The absolute fall here has been much greater in Jepan than in both the US and Germany. There are some indications of a slight recovery; but it will have to go e very long way before the trend rate of growth is recaptured. Indeed, the OECD projections show Japanese growth as among the most sluggish of the G7 in the next couple of years.

The strength of the yen should put into perspective the facile belief that a currency's position is always closely linked with politics. For Japan has the most unstable gov-ernment of all the G7 countries and the most uncertain political future, yet the strongest currency.

The continuing Japanese external surplus is not on its own e suffi-cient explanation either. There is nothing new in the high Jepanese propensity to save. The novel factor, which is helping to pull the yen upwards, is the growing disinclination to invest the surplus abroad.

Irrespective of the precise diagno-

sis, tha policy implications are pretty clear. Although it remains ebatable when or how far US monetary policy ought to be tightened, it is clear that Japanese monetary policy should be loosened further. It will obviously help if Jepan's finance ministry shelves indefinitely its plans for indirect tax increases to offset the recent direct tax reductions, But it is not enough to continue to rely on fiscal packages, which are seen as temporary.
It may be asked how Japan can loosen monetary policy further when the official discount rate since last September has been at 1% per cent - a post-1945 low - and threemonth market rates have averaged ebout 2 per cent.

The discount rate can indeed be cut further and there are rumours that this is likely to happen. But if this is not enough, the short answer is to increase the supply of yen. If Japanese investors are not in a borrowing mood, the Bank of Japan can increase the supply of yen by issuing them to buy up dollars and other currencies in the foreign exchange markets (a process known as "unsterilised intervention").

The country with a strong cur-rency that is gaining reserves has an open-ended ability to intervene, which it is well advised to use so long as it is more afraid of deflation than inflation. The onus is on Japan to depreciate the yen more than on the US to support the dollar.

The benefits of so doing would clearly make themselves felt to Japanese business. If the Japanese authorities can reverse the move-ment of the yen, the prices of internationally traded products in Japanese markets will start to rise. Thus, real interest rates may fall and could perhaps become negative, so belping economic recovery.

The needed US contribution is mainly political and psychological. If Washington does nothing, markets may fear that it will go back to its old policy of talking down the dollar against the yen for the sake of US exporters. Markets will also worry that American trade negotia-tors may make direct threats which will unsettle sentiment further. The statements from US commerce secretary Ron Brown are hardly reassuring here. So any gestures which show the US in support of Japanese actions will help.

Nor is there any reason to withhold this help. A monetary relaxation in Japan will give just the boost to the world economy and to American exports that Washington is supposed to be seeking.

Dear rural dweller, you must pay more

mant's favoured option for the future of the Post Office to sell 51 per cent of the Royal Mail to the Royal Mail to PERSONAL is to be welcomed. It

VIEW will give the Post
Office management the freedom it needs to compete in the international communications market. At present the business is shackled hy political restrictions, particularly access to new capital.

However, the proposal does not go far enough. For ministers have declared that the uniform charge for letter delivery will stay, whataver the outcome of the government's current review.

Undoubtedly it would be highly controversial if the common charge went. But it is difficult to see how competition can develop fully unless competitive pricing is allowed. At present the Royal Mail cross-subsidises within the letters business, a practice that is not compatible with big geographical differ-ences in delivery costs in an unre-gulated competitive market.

charging is straightforward. At present, when services are priced below the true cost of supply, the value which marginal customers nlace on the se sented by the price they are willing to pay - is lower than the cost of the service in terms of the resources used to provide It. The opposite epplies where services are priced

above marginal cost. There is a case for reducing the supply and raising the price where prices are currently below marginal cost; and for raising supply and cutting charges where prices are higher. As costs of letter collection and delivery are much lower in urban areas than in remote, rural regions, this would cause prices to fall for town dwellers and rise in

parts of the countryside.

The argument for a uniform price is concerned with what some see as the "unfairness" of charging different consumers differently. Yet it is not obvious wby it should be applied to postal services and not to other goods and services seemingly just as vital to rural existence. Rural areas suffer less frequent bus

amount of cross-subsidisation. There is no evidence, though, thet cross-subsidy goes from the "rich" to the "poor". In any case, postal charges exist to pay for a service, not provide a means to redistribute income. This is the function of the

tax and benefits system.
A cost-based charging system would open up the possibility of a more varied service. At present, the

who would prefer a better service rece of a necessity than a letter. are given no opportunity to pay yet no one seriously argues that for it, unless they resort to there should be uniform bus fares expensive premium services such as Datapost.

uniform charge allows little variety

Local euthorities could seek to eubsidise services to retain or improve the quality of service (such as more daily deliveries) or reduce the postal charge. Those in rural areas facing a higher tariff might

prefer less frequent deliveries and collections, say every other day, to keep the charge down. Alternatively, they might prefer to collect their mail from the village shop or garage, or have the mail delivered along with the daily milk or newspaper. Already the milkman and the newsagent provide doorstep deliveries. Is it necessary for the post-

man to visit, too? The main benefit of previous privetisations came in reducing costs. This has taken two forms: doing more efficiently what is already done; and doing new things in new ways. The latter are what econo-mists call "dynamic" efficiency gains. The government's privatisa-

tion proposal for the Royal Mail is a bold first step, but many of the potential dynamic efficiencies will come only if price signals are introduced into the market for letter postal charge, the potential gains from privatisation are restricted. When Rowland Hill introduced

the "penny post" in 1840, his aim was to achieve political acceptabil-ity. Hill initially recommended a flat charge between "post towns" only, where he calculated that the costs of provision were roughly uniform. It seems once again that the future of the Royal Mail is to be determined by political necessity rather than sober economics.

■ While the world is exercised about the vaulting price of coffee, ■ Bristol & West Building Society scant attention has been afforded is so concerned to take the public's the recent surge in the price of views into account that it methanol. This key ingredient in commissioned research to find out methylated spirits was going for what people wanted from a mortgage. It found that the public less than DM200 per tonne last year, it now costs over DM550 per tonne. was not seduced by the various Although it is best known as e cashback schemes which have

cluttered the market recently but looked at a mortgage in terms of monthly payments. How wise of the society then to launch a new range of mortgages on the basis of those findings; how sad, however, for existing B&W borrowers who find that the standard variable rate they pay is - at 7.89 per cent - the highest charged by any of the ten largest societies.

Guillotine motion

So how was your July 13? While most of Britain's commuters were struggling to get to work during the fifth rail strike, Observer was pleasantly surprised to find that not only had the Hampton Court to Waterloo service not been cancelled but the number of trains had doubled from two to four an hour yesterday.

The morning took an even better turn when the FT receptionist rang to say that Le Croissant Shop, had delivered a box of hot croissants for Observer to commemorate Bastille day. If it had been delivered on the correct day, Observer would have been on holiday.

Sleight of hand

Chris Moncrieff, the Press Association's political editor retiring after 82 years at Westminster, told guests at a lunch staged in his honour yesterday of the time when Sir Denis Thatcher

was unceremoniously deprived of his copy of the FT. Margaret Thatcher had a glossy magazine in her hand as she was about to leave 10 Downing Street

shortly after her third general election triumph in 1987. Alerted that a battery of photographers was assembled outside, she grabbed the FT from Sir Denis and hid the magazine inside it. "You didn't see that," she told Moncrieff, and, until yesterday, he duly obliged.

EU states criticised over failure to agree on justice and immigration

Brussels forces the pace on visas

By Emma Tucker and David Gardner in Brussels

The European Commission yesterday produced its proposed format for a European Union visa for non-EU citizens which would come into force from the beginning of 1996. The proposal was Commission was highly critical of member states' failure to reach agreements on justice and immigration affairs, the "third pillar" of the Maastricht treaty.

The Commission's attempt to introduce a common visa is part of an initiative to allow free movement of people, including third country nationals, in Europe. If Commission plans are implemented, non-EU citizens

will ultimately be able to apply for one visa granting them entry

to all countries of the Union. However, this idea has met with considerable opposition from some member states. In particular, the UK government was concerned that citizans from Commonwealth countries who did not require a visa to enter Britain would have their movement restricted under a common EU visa. The introduction of the new European format, a preliminary step in the Commission's initiative, will constitute a change in design only for national visas and will not be effective as a European-wide visa until member states have agreed unanimously on a proposed list of 129 countries whose citizens

will require one for entry. When the list was published in November it prompted much con-

"An agreement is going to be very hard to achieve," one British official said. "The Maastricht treaty demands a common [visa] format. The British will accept the format. It is accepting the common list that will be a prob-

lem," he said.
The visa, and the list of nationalities requiring permission for entry, follow closely work done by the nine members of the intergovernmental Schengen free travel agreement, which covers all the EU members except Britain, Denmark and Ireland. Mr Padraig Flynn, social affairs commissioner, who led yester-

day's debate, is understood to have told his colleagues that "it is not possible to detect any sign of movement towards seeking, let alone finding, compromise solutions" on a range of initiatives the EU has set Itself.

These include the Europol organisation to combat organised crime and drugs trafficking within the singla market; the external frontiers convention, meant to permit freer movement within Europe by tightening up controls on non-EU nationals at port of entry; and a common cus-

toms information system. Last December's EU summit in Brussels gave justice and interior ministers a deadline of this October to finalise the Europol con-

THE LEX COLUMN

CBS switches channels

FT-SE Index: 3005.3 (+41.4)

Comcast's move to acquire QVC certainly scores high marks for audacity. Its \$2.2bn bid has already scotched the bome shopping channel's rival plan to merge with CBS. Whether it is also a smart move is unclear. If Comcast flushes out a third bidder, it will be able to cash in its 15 per cent stake at a handsome profit. But if It ends up controlling QVC and chairman Mr Barry Diller - whose star status has boosted QVC's value - walks, the

price-tag may look steep.

Though Mr Diller's intentions are unknown, it is clear he feels QVC on its own is an insufficient vehicle for his talents - hence his plans to acquire Paramount and merge with CBS. With both schemes dead, Mr Diller could cash in his QVC shares and options. He could then cast around for another vehicle into which to inject both his talent and his capital. An accommodation with Comcast cannot be ruled out - though it would presumably have to involve turning QVC into something grander than a

home-shopping channel. Meanwhile, CBS may now receive attention from other suitors. Chairman Mr Larry Tisch has done nothing to discourage the impression that he would welcome offers. Yesterday's decision by CBS to buy back \$1.1bn of its own shares is a sign that Mr Tisch is looking to cash in his large stake. Ha has even given interested parties a price to aim at. Anything over the buy-back price of \$325 a share would presumably be acceptable. The prob-lem is that CBS has effectively been up for sale for some time and the only suitor to emerge has been Mr Diller, if Mr Tisch really wants out, he may have to lower his price.

UK economy

The picture of steady, non-inflationary growth painted by the Treasury's summer forecast has survived this week's batch of economic figures. The small drop in underlying inflation last month was no more than financial markets expected. More importantly, after the scares earlier in the year, there is no sign of upward pressure on average earnings. Add in the good news on wholesale prices - manufac-turers are not passing on higher raw materials costs to customers - and the inflationary threat looks remote.

The lingering worry is that the economy might accelerate through the second half of the year. Yet straws in the wind hint that the Treasury's forecast of 2.75 per cent growth this year is not UK real yield Long gilt yield minus core inflation, %

92

1990 91

unduly conservative. Overtime working fell unexpectedly in May, while the modest drop in unemployment in June does not smack of overheating. It may be that tax rises and higher bond yields have been just enough to take the inflationary edge off recovery. The rise in gilt yields looks all the more ferocious against the background of

yesterday's comforting data. The sharp rally in gilts this week may mark a realisation that real yields have risen far enough. If that brighter mood can be sustained, equities will also have more beadroom. With the FT-SE 100 index breaking back through 3000 yesterday, the equity market again looks inclined to take its lead from the promising fundamentals. But the FT-SE climbed higher than this last month only to plunge with international markets. and not that much has changed in the domestic economy since.

UK telecoms

Mr Don Cruickshank, the UK telecoms regulator, yesterday ticked Mer-cury Communications off for being shrill. He is right. The company's latest campaign about unfair regulatory treatment sounds like special plead-ing. Mercury has been cossetted during its 10 years of existence by paying artificially low prices for use of BT's network. That may have been appropriate to give the company an initial leg-up. Some assistance to the latest batch of telecoms players is also reasonable. But, at some point, the sub-

sidy has to stop.

The snag is that Mercury has not used the seven years when it was BT's only licensed competitor wisely.

Instead of differentiating its services from BT's and building a sustainable competitive advantage, it offered a slightly cheaper but similar service, lt exploits the wide gap between the wholesale prices it has paid for using BT's network and BT's high long-distance charges. Mercury is now facing a two-way squeeze. BT is cutting its long-distance charges, while the network usage fees are going up.

This is not to say that the ungainly regime which governs network fees is perfect. The system exists because BT is not allowed for political reasons to ing a telephone line. If the government had political courage, it would scrap that restriction. But so long as it exists, Mercury does itself no favours by moaning. It would do better, even late in the day, to try to build a sustainable competitive advantage.

Owners Abroad

The market seemed comforted by Owners Abroad'a reduced interim loss, But that is not necessarily good news Bigger losses for tour operators at the half-way stage often point to an increase in capacity and higher annual profits. Owners' figures, though, are muddied by its increased Canadian exposure which counters the seasonality of UK package tours. The link-up with Thomas Cook also makes it hard to gauge what is happening to the underlying business. Neverthele Owners appears to be making good progress cutting costs and reinvigorat-ing its operations. Its forthcoming rebranding exercise will be critical for the second phase of recovery.

Owners' revival is made easier by the strong holiday market, with bookings up 13 per cent so far this year compared with 1993. BAA's passenger figures yesterday also confirmed how many Britons are joining the holiday brigade. But the real test for Owners : will come when the market tightens again. The benign theory of the industry's future suggests that may not happen for a time. The big three operators, which control well over half the market, have grown sensible and sophisticated and averse to price wars. Besides, the industry is maturing and the barriers to entry are rising. More stable industry earnings should therefore be rated more highly by the stock market than in the past. But such arguments have been advanced before and confounded by experience. It still takes a leap of faith to regard tour operators as dependable investments.

Dollar firms on rumour of rates rise

By Philip Gawith in London

The battered dollar bounced back on foreign exchanges yesterday as rumours circulated among dealers of an imminent tightening of monetary policy by the Federal Reserve.

The market performed a swift about-turn from Tuesday's fears that low inflation would delay higher interest rates. The dollar closed more than a pfennig and a half higher in London at DM1.5383 from DM1.5235. It was also firmer against the yen. closing at Y98.15 from Y96.80.

There were suggestions in the markets that US short-term rates would rise by anything from 50 to 100 basis points, which would take them above German rates for the first time since September

Bills redesigned to beat counterfeiters

The US yesterday announced the first significant redesign of the dollar since 1929 in an effort to curb a rise in counterfeit bills. The portrait on the new notes will be moved, security strips made more ophisticated and a watermark introduced. However, old bills will not be recalled because of a potential loss of confidence in the dollar.

Earlier the dollar had weakened slightly on the release of US consumer inflation data for June. Month-on-month inflation rose by 0.3 per cent, in line with market forecasts, momentarily damping

hopes of a Fed tightening. A quick increase in rates would dispel fears that the Fed has been slow to respond to the threat of inflation arising from economic recovery. It would also quash concerns that the Fed is bending to the will of the White House,

which does not want higher rates. Both factors have contrib-uted to recent dollar weakness.

Another factor contributing to the rebound was the greater stability in international bond markets. Volatile bond markets had driven investors towards safe haven currencies such as the D-Mark and the Swiss franc, and the relative weakness of these two currencies in recent days is a sign of calmer markets. Analysts said the dollar's

bearish and yesterday's bounce was seen more as a corrective rally than a turning point. But investors remain cautious of taking aggressive short positions

intervention.

The lower we go, the more nervous the market gets," said Mr Ian Gunner, international economist at Chase Manhattan in London. The dollar has fallen by around 9 per cent since the begin-Samoel Brittan, Page 17

bottlers, the distributing wholesaling companies to which Coca-Cola Japan supplies beverages, have started distributing the cheap imports to be sold at a retail price of around Y70 a can, 36 per cent lower than Coca-Cola's usual retail price, for a limited period this summer.

Private labels are already a familiar phenomenon in Europe and North America, where con. Also, the higher yen and expansumers have increasingly become more concerned about getting price of imported private brands.

good quality at a low price than about the name on the product. In the soft drinks sector, tough competition from Cott in the US recently prompted Pepsi-cola to

plummet. The trend towards hrand labels in Japan can, in part, be attributed to frugality. The ordinary Japanese have been hit by the prolonged domestic recession. sion of retailers have lowered the Retailers' private brand products now range from food to mens' suits to electronic appliances. Coca-Cola Japan was dismis-

sive of the impact cheaper priwarn of flat profits in its second vate brands were having on its quarter, causing its share price to market share, since sales through retailers amounted to 1 per cent of overall sales. However, an offi-cial at a bottler noted the trend towards lower prices in Japan and said the company was testing the quality of the imports before possibly distributing Coca-Cola made in the US on a regular

CBS merger called off

Continued from Page 1

Mr Diller to join QVC and said yesterday they would "be pleased" if he chose to remain as the company's chief executive. Wall Street analysts felt it highly unlikely that Mr Diller would wish to remain in the humdrum world of home shopping, working for men who had destroyed his deal with CBS. It is the second time in six

months Mr Diller has failed with an ambitious QVC takeover deal. In February, he lost a \$10bn battle to acquire entertainment group Paramount Communications - a deal Comcast strongly supported.

Comcast objected to the QVC-CBS merger because it sees its stake in QVC as a means of building up a strong presence in television programming, where it

France takes step towards Renault sale

By John Ridding in Parls

The French government

yesterday took a step towards the privatisation of Renault, announcing that it was preparing to select banks to advise on the "eventual opening of the capital" of the state-owned vehicle maker. Mr Edmond Alphandery, the economy minister, said the decision was not an announcement of Renault's privatisation. But his statement suggests that the gov-ernment is pressing ahead with plans to implement at least a par-tial privatisation of the flagship public-sector company, which is valued at about FFr40bn (\$7.2bn). Last month, Mr Philippe Auberger, a senior member of the National Assembly's finance committee, said that the government was considering a partial privatisation, but no decision had been taken and such an operation would be unlikely hefore

October or November.
Mr Alphandery said the role of adviser would be open to both French and foreign banks. As in previous privatisations, competition for this mandate is expected to be fierce.

Renault is one of the 21 public sector companies slated for sale by the centre-right government. But the timing has remained uncertain since the collapse of plans to merge Repault and

group, at the end of last year. During negotiations with the Swedish company, the French government had committed itself to privatise Renault by the end of this year. The failure of the merger plan, however, and the dismantling of much of the existing alliance between the two companies, has complicated the privatisation timetable.

Industry observers believe the government, which holds 80 per cent of Renault's shares - Volvo towards gradual privatisation which could start before next spring's presidential elections. "It seems possible that they might want to sell a stake of up to 25 per cent as the first step," said one industry analyst in Paris. But it seemed they had "not yet made up their minds and might still go for a full-blown

Tha sale is complicated by political sensitivities. The Confederation Générale du Travail, the communist-led union, has expressed opposition - Renault has been a symbol of state-owner-ship since the end of the second world war.

Volvo's stake is also a factor, although a privatisation might provide it with an opportunity to reduce its holding. Renault in pole position, Page 20

German builder takes a 15% stake in Buderus

By David Waller in Frankfurt

Bilfinger & Berger, one of Germany's largest construction groups, has emerged as the surprise owner of a 15 per cent stake in Buderus, the German heating equipment and engineer-

The news follows last month's placing of 80 per cent of Buderus on the German stock exchanges by Metaligesellschaft, the trou-bled conglomerate. Buderus shares were suspended yester-

The move is being widely seen in Germany as a prelude to a possible battle for control of the highly profitable Buderus. Commerzbank and Dresdner Bank each bold a 10 per cent stake. Mr Christian Both, Bilfinger chairman, disclosed the news of

annual meeting yesterday. He said Bilfinger was in talks with Buderus' management board. Although Buderus said it welcomed Bilfinger as a long-term shareholder, Mr Reinhard Engel, a director of Buderus, said there had been no talks with Billinger and there was no possibility of

the shareholding at his group's

David Waller reports on the lack of a share culture in Germany For deep-seated social, psychological, legal and political reasons Germans have Resisting the

a problem with shares.

They don't like buying or dealing in them, they don't like shares in their companies traded on the stock market, and they often can't talk about shares except in an emotional and illogi-cal way, complains Mr Rolf

The chairman of the German Stock Exchange and a member of the board of managing directors at Deutscha Bank laments the absence of an "equity culture" in Germany.

aOnly 6 per cent of German households own shares, com-pared with more than 20 per cent in the UK or the US; there are only about 665 quoted companies in Germany compared with more than 2,000 in the UK; and the market capitalisation of the German stock market amounts to 25 per cent of GDP - against 75 per cent in Japan and the US and 127 per cent in the UK.

"This [lack of an equity culture] is a big and growing disadvantage for Germany at a time of increasing competition between the world's financial markets," laments Mr Breuer. "Capital flows to wherever it finds the most attractive home - that is true both for multinational companies seeking to raise funds and for international investors looking for somewhere to put their money."

By these criteria, Germany's underdeveloped equity market is in the international "second division", Mr Breuer complains, with the risk that big German companies will seek to raise finance in markets outside Germany and international investors will divert funds elsewhere.

The evidence of this is low

liquidity by international standards, an absence of domestic institutional investors, a bostility to financial innovation, an unthinking preference on the part of German savers for government bonds, and an unhelpful tax regime, the head of Deutsche Bank's securities operations says. Such a litary of weaknesse

raises the question: what is to be done to strengthen the German financial markets so that they enjoy a role commensurate with Germany's position as a Europe's leading industrial power? Help is coming from the forth-

coming second Finanzmarktförderungsgesetz - the Financial Markets Promotion Law due to take effect on August 1 - which will introduce international standards of regulation for the German financial markets. The law, first mooted in Janu-

ary 1992 and passed by parliament this month, introduces measures to bolster the Finanzplatz - Germany as a financial centre. The new law:

makes insider dealing a crimi-

Large UK tour groups failing to gain share

By Michael Skapinker, Leisure Industries Correspondent

failing to increase market share through their ownership of travel agency chains, according to Mr Francis Baron, chief executive of the holiday group Owners Abroad. Mr Baron, whose group has financial links with Thomas Cook travel agents, said yester-day that independent tour opera-tors appeared to be gaining an increased share of the overseas package holiday market. While large travel agents were

concentrating on selling their parent companies' holidays, they were reluctant to sell those of rival large groups, but happier to sell the holidays of smaller tour operators which did not own travel agent chains. The Office of Fair Trading has

been investigating the links between large tour operators and travel agents after complaints Mr Baron's remarks came after

Owners Abroad surpassed City expectations by reporting a pretax loss of £29.3m (\$44.5m) for the six months to April 30, down 24 per cent. Holiday companies usually record first-half losses. The acquisition in February of

International Travel Holdings, the Canadian tour operator, helpad to reduce Owners Abroad's winter losses. Mr Baron said the group's share of the summer 1994 market had risen from 9.5 per cent to 11.6

per cent in May. Turnover rose 46 per cent to 5228m. Cash balances increased 39 per cent to £86.8m. The loss per share fell to 13.8p from 17.4p and the interim dividend is an

CHEMICAL

However, the provisions are not enough to rectify the weaknesses in the German markets overnight. Mr Breuer concedes. although he says the insider deal-ing law will help to enhance the image of Germany as a financial

e accepts that it has long been anomalous for insider dealing to be permitted in Germany, but is adamant that insider dealing in Germany has been on a small scale compared with Anglo-American "There is not and never has

been much insider dealing in eign investors have always had the impression that Germany is a wild west." Mr Breuer also thinks the new

disclosure rules will encourage greater transparency in the German equity market, and welcomes the creation of the German SEC. However, he admits that the structure of the new

institution - which will introduce three levels of supervision of German stock markets – is not ideal, sdding that it will take until "the middle of next year" for the new body to be up and

running.

More must be done if Germany is to develop an equity culture,

Mr Brener says. His agenda for action falls into two categories.

First, be would like to strengthen the legal infrastructure further with the introduction of rules for takeovers in Germany, preferably modelled on the UK's non-statutory Takeover

The main purpose of such a code would be to give rights to minority shareholders, whose interests are often neglected. "If we are to have an equity culture in Germany the small investor has to participate."

Mr Breuer says a draft code will be presented to tha Bonn Finance Ministry later this year. Second, he wants to introduce further reforms to the German Stock Exchange "with the aim of ensuring that anyone who wants to do business in D-Mark denominated securities does it via the German market and not in Lon-

"Ten per cent of turnover in blue-chip German shares is done in London, and that is 10 per cent

Part of the problem is that liquidity in share trading is still divided between seven separate stock exchanges in Germany, Mr Breuer says. But the creation of the Deutsche Börse - the German Stock Exchange - at the beginning of last year was a big step forward.

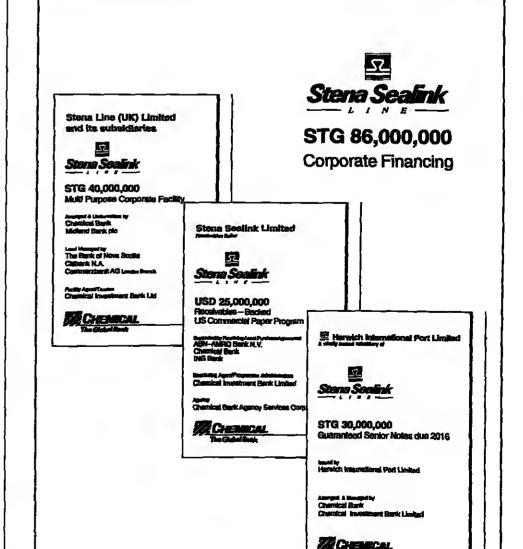

"Everything connected with securities dealing is now under one roof, from dealing and settle-ment to software development and clearing," he says. "To have it all together like this gives us a tremendous competitive advantage. We can streamline investments, pool our resources and develop technology much more effectively than our rivals,"

Mr Breuer says the focus of development in the next few years will be investment in new technology to expand on the Ibis dealing system (which captured 30 per cent of the market in German blue-chip stocks last year) - and an attempt to forge closer co-operation between Frankfurt, the biggest exchange in Germany, and its six regional rivals.

These efforts alone will not lead to the sudden development of an "equity culture" in Germany, Mr Breuer concedes. The biggest obstacle lies in people's attitudes. "When it comes to shares we have a mental problem on the side of both investors and

entrepreneurs," he says.

Those attitudes are changing and the Financial Markets Promotion Act is likely to accelerate that change.

about Y27bn in a new factory in Japan to make microproces and application specific integrated circuits. The move in the PC market towards advanced computers and the introduction of new operating software bad increased demand for memory chips, NEC said. The new operating software, for example, uses more than 10 times the memory of earlier software. At the same time, demand for

on manufacturing facilities to meet growing demand from the semiconductors from home electronics makers has been particularly strong for microcontrollers used in mobile phones, air conditioners, washing machines and other household appliances. The demand reflects the growing use of such appliances and the recov-ery in consumer spending.

Fuitsu said that it would spend about Y7bn to expand production of microcontrollers. Another Y2bn would be used to increase production of integrated subishi Electric is considering circuits for mobile phones. raising investment to meet Japanese semiconductor mak-Meanwhile, Toshiba, Japan's

US accounting difference reduces losses at Fiat

The US accounts of Fiat, the Italian automotive and industrial group, show a 1993 net loss almost L1.000hn (\$662m) lower than the loss shown by the group's European results. The disparity is the result of accounting differences.

In May, Fiat announced a record consolidated loss of L1,783bn for 1993, after minority interests, extraordinary items and tax.

In the US accounts, deposited with the US authorities at the end of last month.

The comparative profits in 1992 were L551hn in the European accounts and L375bn in the US equivalent.

At the same time, shareholders' equity is slightly higher in Fiat's US accounts for 1993: L18,724bn, compared with L17.427bn in the Europsan

Mr Carlo Gatto, a aenior vice-president in Flat's administration and audit division, explained that the difference in net results was particularly marked in the 1993 accounts bscause the group impleaccounting for deferred tax liabilities and assets.

When the cumulative effect of the changed accounting principle was included, Fiat's US profit and loss account was adjusted upwards by L1,308bn. although this figure was offset by other negative items.

The adjustment to sharehold ers' equity was mainly due to differences in accounting for goodwill in acquisitions. Fiat indicated at its share-

holder meeting at the end of last month, that it would return to net profit for 1994.

Pirelli confirms sale of US farm tyre subsidiary

Pirelli, the Italian tyre group, has confirmed press reports that it plans to sell the farm tyre business of its US subsidiary, Armstrong Tire, Renter reports from Milan.

In line with our strategy to focus the company on the car and light truck tyre market we are currently in negotia tions for the sale of the Des Moines plant which produces a textile cross ply farm tyre, Pirelli said. The sale will cut Pirelli Armstrong's workforce by 40 per cent to 1,150 workers.

PRELIMINARY RESULTS FOR THE YEAR ENDED 31 MARCH 1994

Profits increase by over 25% Results confirm success of focused growth strategy

The Remy Countreau Group's net profit after tax for the year ended 31 March 1994 was FFr 252 million, a rise of 24.5% over the previous year's figure of FFr 202 million. Turnover rose to FFr 6,505 million, up 9% on the previous year.

Despite continuing contrasts in the global economic environment through the 1993/94 financial year - marked in particular by a persistent recessionary climate in continental Europe and Japan - the Group pursued its dynamic growth itinerary, which resulted in operating profits of FFt 918 million, up 4.7%. The Group's brands enjoy a strong presence in all their markets and recorded gains in market share for all divisions.

The Remy Martin brand consolidated its position as the world leader in superior quality cognac with over one-third of

The Liqueurs and Spirits division saw currover rise by 5.3%. This performance is particularly promising since this division's main markets were severely affected by the recession throughout 1993, particularly in Italy and Spain.

The Champagne division, which includes the Piper Heidsteck, Charles Heidsteck and Krug brands, experienced a 7% upturn in turnover volume, meeting the challenge of already extremely competitive markets. Turnover from distribution of non-Group spirits rose 13%. This increase was led by the Group's Scotch whisky partner, Highland Distilleries, which jumped 57%, and by The Macallan single malt, which recorded a 39% rise in sales in the

Rémy Associés, the Group's distribution network, continues to open subsidiaries in new markets which have promising

During the first quarter of the current financial year (April - June 1994), Group turnover continued to grow.

Latin American foreign borrowings drop to \$2bn

By Stephen Fidler, Latin America Editor

Latin American borrowers raised slightly more than \$2bn in foreign bond issues in the second quarter of this year, a sharp drop on the previous quarter's \$6.42bn and the lowest figure since the third quar-

The \$8.4bn raised in the first haif was 21.5 per cent down on the first half of 1993, according to figures compiled by West Merchant Bank.

The new issue market recovered in June, when \$990m in new bonds were issued, from a slump in May when only \$345m of bonds were launched.

The second quarter decline following the rise in US interest rates which started in Feb-

Mexico, also hit by political uncertainties in an election

ruary - was most marked in

in Argentina the decline was to \$904m from \$1.14bn and in Brazil to only \$81m from \$1.15hn. As a whole, the bank said it expected between \$15bn and \$17bn of new issues this year,

against last year's record

\$26.6bn. Redemptions of Latin American bond issues will fall slightly this year - but then rise sharply. The bank estimates about \$3.2bn of Latin bond issues will be redeemed this year, down from \$3,2bn

But redemptions will rise to \$8.0bn in 1995 and \$8.4bn in 1996, suggesting a continuing heavy demand for bond finance from issuers in Latin American

Other developments, mostly reflecting the increased caution of investors and a flight to ear. quality, were: against 22 per cent in the first New Mexican issues in the • The average maturity of and 7 per cent last year.

second quarter dropped to issues declined. The average \$995m from \$3.45bn in the first; for the second quarter for all Latin issuers was 3.2 years, compared with 4.5 years in 1993. Mexico continued to issue the longest dated bonds - an average 3.5 years - but suffered the greatest maturity

> years in 1993. Public sector bond issuance has outstripped private sector issuance this year in contrast with 1992 and 1993. This year, 42.2 per cent of the bonds were issued by the private sector, against 60.1 per cent last year and 63.4 per cent in 1992. The fall was almost entirely caused Mexican borrowers, with the private sector accounting for 29A per cent of issuance against 64 per cent last year. Floating rate notes have become more important. They accounted for 38 per cent of issues in the second quarter

IBJ forms 'bad loans' specialist

By Gerard Baker in Tokyo

The Industrial Bank of Japan (IBJ) announced yesterday the joint establishment with a number of other financial institutions of a company specifi-cally intended to help liquidate

Port Island Acceptance Limited Liability, based in Kobe, will formally come into existence today.

The company will begin accepting in September the problem loans to 10 non-bank-

Hyogo Bank, a troubled onal hank. It will be the first "special purpose company" since the ministry of finance allowed the establishment of such companies in February. Banks with loans to the

non-banks will be able to transfer to the new company some of the principal on which interest rates have been cut, allowing them to write off the balance as tax-

The IBJ and its affiliated ing companies affiliated with companies will be the major could be as high as 40 per cent.

shareholders in the company. Other subscribing companies will include The Long Term Credit Bank of Japan, Sumitomo Trust and Banking Corp, the Bank of Tokyo, Sumitomo Life Insurance and Nippon Life Insurance.

The company will be headed by Mr Takao Suzuki, of the IBJ's business co-ordination

The scale of the discount at which loans will be transferred to the new company is not yet clear, but analysts believe it

Pacific Dunlop in \$75m food deals

By Bruce Jacques in Sydney

Pacific Dunlop, the Australian industrial group, bas announced a A\$102m (US\$75m) investment programme in the food industry, including the purchase of equity in companies in China and Thailand.

Mr Philip Brass, Pacific Dunlop's managing director, said yesterday about half of the investment would be in Australia, and involve upgrades and the expansion of food

The company had also agreed to purchase a 50 per cent interest in Meadow Gold Investment, the Chinese ice cream maker, and 40 per cent of General Pacific Foods, the That food group, Pacific Dunlop has also acquired the Asian rights to the Vitari food brand. Mr Brass said the Chinese

He said Pacific Dunlop would provide technology, funding, marketing and management services to both operations through its Pacific Brands

Food group.

Parker and Parsley, the US oil group, has won control of 75 per cent of Bridge Oil, the Australian petroleum group, and extended its takeover offer, which was due to close yesterday, until July 27.

Charge of \$305m at **Prudential Securities**

By Patrick Harverson in New York

Prudential Securities, the Wall Street securities firm, announced the addition of \$305m to reserves, set aside to settle lawsuits brought by thousands of customers who claim they were defrauded when the firm sold them high-risk limited partnerships in the 1980s.

The addition means Prudential Securities will take a loss of \$215m in the second quarter. The firm's parent, Prodential Insurance, has agreed to add \$180m to Prudential Securitles' capital.

Even without the cost of adding to its reserves, the firm said it would have reported a loss of \$35m in the quarter, because of the slump in US stock and bond markets and the slowdown in the domestic brokerage business. In the same quarter a year ago, it made a profit of \$35m.

Pradential Securities said it was almost doubling the size of its reserve fund, to \$635m, because its settlements with customers were proving larger than anticipated, due primarily to unexpectedly high interest payments.

The securities house has been making reparations to mers since last October. Then, it agreed to pay \$371m in fines and restitutions to set-tle state charges that It defrauded thousands of investors by persuading them to buy more than \$8bn of limited partnerships in the 1980s. Many of those high-risk limited partnerships subsequently soured, and investors claimed that they were never told the investments were highly spec-

Its underestimation of the cost of the legal settlements, and the need for a capital injection from its parent, is a blow for Prudential Securities. When the firm agreed to the multi-million dollar settlement last year, its chief executive, Mr Hardwick Simmons, said he hoped the deal represe "one last punch". But since then, the firm has has lost numerous brokers to rival

Merits of open-outcry challenged

The debate over the merits of largely provided by locals. open-outery versus screenbased derivatives trading has been revived by a study challenging the widely-held notion that electronic exchanges are inherently less liquid than open-outcry markets.

Open-outcry involves dealers in trading pits competing to execute customers' buy and sell orders. They are joined by local traders, individuals who usually trade their own capital and supply liquidity by absorbing order flow imbalances. In an automated trading system, buyers and sellers feed quotes

DERIVATIVES

into a centralised computer system which automatically matches trades according to time and price priority rules.

Open-outcry trading is practised on many exchanges, including the world's largest futures exchange, the Chicago Board of Trade, and Europe's largest, the Loodon International Financial Futures & Options Exchange (Liffe). However, more and more electronic exchanges have been set up in recent years, including Germany's DTB, Switzerland's Soffex and Spain's Meff.

While electronic-trading enthusiasts predict that screenbased markets will eventually supplant pit trading, others counter that computer-based exchanges will never be able to replace open-outcry, largely because it offers unparalleled

liquidity. This, many say, is

"Locals are an extremely important source of liquidity as they provide depth to the market, especially when it gets choppy," says Mr Daniel Hod-

However, a study for the Chicago-based Catalyst Institute by Mr Craig Pirrong, of the University of Michigan, casts doubt on this conventional wis-

son, Liffe's chief executive.

Based on a one-year examination (July 1992 to June 1993) of the German 10-year government bond futures contract traded on Liffe and DTB, the study rejects the widely-held view that Liffe's contract has greater depth and liquidity than DTB's and cites empirical evidence indicating that the opposite may be true. Moreover, it argues that locals are not necessary to provide liquidity in an automated futures

As Mr Pirrong defines it, a market is liquid when traders can buy and sell without substantially moving the price against them, and deep if traders can buy and sell in large quantities without substantially moving the price against To evaluate the contract's

liquidity, Mr Pirrong studied two factors on each exchange: the spread between bid and offer prices, which is widely believed to reflect liquidity (the tighter the spread, the more liquid the market); and

the market depth. His analysis of bid-offer spreads concludes that "for the

higher, and were possibly lower, than the spreads on Liffe". Moreover, "the DTB market was deeper than Liffe; increases in volume on Liffe substantially increased price volatility during this period,

whereas increases in volume on DTB had no such effect on volatility". Further enhancing the DTB market's depth, the study argues, is the fact that the exchange's order book, show-

ing the 10 best bid and offer prices in the market, provides traders with an insight into market depth which Liffe dealers lack. Moreover, it notes that in hectic trading conditions, high volume can lead to "market fragmentation" in open-outcry pits, where differ-ent prices can be quoted at the same time. This is impossible on an electronic exchange. The study also argues that locals, who tend not to partici-

pate in computerised exchanges, are not needed to provide liquidity there. "Virtually all liquidity on the DTB is provided by large institutional traders and market-making firms. These firms can bring substantial capital to the market and this facilitates the operation of a deep and liquid market," the study says.

Some observers complain that locals sometimes engage in practices which can distort market prices, such as step-ping in ahead of large customer orders as they are being

period (studied). bid-ask This often means that by the spreads on the DTB were no time the order hits the market. time the order hits the market. the price has already moved

The same of the sa

ing the Mili

 $m > 0.05 \, \mathrm{K}_{\odot}$

against it. Nevertheless, locals remain a crucial element of a liquid futures market, says a senior dealer. "They do a very good job moving the market around and keeping things going," he

One point worth noting is that the DTB's bund future actually benefits from the liquidity provided by Liffe's locals. "You can't look at the two contracts separately -they are very much linked by arbitrage trading," says a dealer. He also points out that the bund future on DTB, which opens half an hour before Liffe, often does not show a clear trend until Liffe begins trading. "The real price discovery occurs on Liffe," he says. Liffe's Mr Hodson argues

that measuring a market's depth by looking at an order book is not particularly useful. "The capital on Liffe is there when you need it – you don't have to have a huge order book to demonstrate this," he says.

"The reason people trade on Liffe is that they know they can get out a reasonable price if the water gets choppy, and the locals play a very impor-tant part" in this process, he adds. Besides, "you only have to take a look at the volumes to see where the liquidity lies". he says, noting that 72 per cent of bund futures turnover is done on Liffe.

Toyota cuts domestic | Global offer planned

By Michiyo Nakamoto in Tokyo

Toyota is unlikely to meet its target for car sales in the domestic market this year due to a sharp drop in sales between January and April, the company said.

Mr Tatsuro Toyoda, president of Japan's largest carmaker, said the company was now forecasting domestic sales of 2.13m units rather than the 2.17m forecast earlier in the year. The figure was still 3 per cent up on last year when domestic sales totalled 2.07m vehicles.

Exports, on the other hand, are expected to be higher than earlier forecast at 1.44m vahicles, while overseas production is likely to increase to 1.04m units - up from a fore-cast 1.02m units, the company

Mr Toyoda also indicated that the company expected an average exchange rate of Y105 to the dollar for the fiscal year beginning this month. At that rate, the company should be able to increase pre-tax profits in fiscal 1994 to more than the Y200bn (US\$2bn) forecast for the year just ended from July 1993 to June 1994.

sales target to 2.13m | for China Steel shares

By Laura Tyson in Taipei

The Taiwan government is planning to sell up to 450m of its shares in state-run China Steel Corp, the country's largest steelmaker, through an offering of global depository receipts as early as September. The shares represent about 6 per cent of the company's

European sector eases on dollar support rumours

By Graham Sowley and Conner Middelmann in London and Patrick Harverson in New York

European government bonds fell back yesterday on rumours that tha US Federal Reserve may act soon to support the dollar by raising official short-term interest rates.

The shift out of US bonds into European bonds, triggered by the weakness in the dollar. which caused European markets to rally in recent days, also seemed to have slowed as the US currency regained some

of its composure. The interest rate rumours ware triggered by US data showing a 0.3 per cent rise in consumer prices in June.

■ The more pessimistic tone in the German government bond market was compounded by disappointment over the Bundesbank's two basis point cut in

its securities repurchase rate, from 4.93 to 4.91 per cent. "Cuts in the repo rate have

become smaller and smaller in recent weeks, suggesting that the Bundesbank is reluctant to lower interest rates further in the near term," said Mr Adam Chester, international bond strategist et Yamaichi.

Analysts said that data showing a rise in West German wholesale prices in June of 0.8 per cent, which was above expectations, had provided an excusa for the market to

■ French government bonds ended tha day off their highs as investors squared their positions in thin trading ahead of the Bastille holiday today and tomorrow when French markets will be closed.

■ UK gilts rose sharply in early trading, boosted by weaker than expected retail

prices and employment data. but afternoon rumours of a another US interest rate hike triggered profit-taking at the long end of the yield curve, leeving prices to close only slightly higher on the day.

As traders began to focus on Priday's gilt auction announcement, the Bank of England's

GOVERNMENT BONDS

announcement that it would issue £800m in tranches of existing bonds from today put a further damper on the market's mood.

"The obvious interpretation is that Bank is keen to take advantage of the market's positive sentiment in recent days," said Mr Peter Fellner, gilts. strategist at NatWest Markets. However, many participants said that investor demand

heavy fiscal deficit. remained subdued in recent

sessions. "We haven't yet got to the point where investors are willing to chase the market aggressively," a dealer said.

■ Italian bonds ended the day slightly weaker on profit-taking aftar Tuesday's strong gains. However, prices held up moderately well as dealers anticipated good news from the government on its fiscal

Still, with most of the package's details leaked in recent days, "it will be hard to surprise on the positive side," said Mr Jouni Kokko, international economist et S.G. Warburg Securities. There are widespread hopes that the government will announce dramatic cuts in haalth and pensions spending to cut the country's

Spanish bonds rose half a point amid fresh hopes that Spanish short-term rates could

encouraging June inflation data. The headline rate rose by 0.1 per cent on the month, bringing the year-on-year rate to 4.7 per cent. Analysts were particularly encouraged by the 0.8 per cent fall in service

In Sweden, bonds weakened again ahead of the special meeting of the parliament's finance committee, the auction of SKr12.5bn of Treasury bills and the release of June inflation numbers, all slated for today. The yield on the benchmark bond due 2003 rose by seven basis points to 10.87 per

■ US Treasury prices hald steady across the maturity range yesterday morning in the wake of a consumer prices report that was in line with market expectations.

30-year government bond was down & at 83%, yielding 7.688 per cent, and the two-year note was up 点 at 99强, to yield 6.204

After Tuesday's better-thanexpected June producer prices report had lifted bonds, investors were boning yesterday that the second half of the June inflation data - the consumer prices figures - would be equally positive.

The figures, however, proved unexciting, with the 0.8 per cent increase reported in the consumer prices index falling in line with economists' fore-A eimilar-sized increase in

"core" consumer prices (minus the volatile food and energy components) was also as expected, and consequently, there was little reaction from bond prices, which traded in a narrow range either side of opening values throughout the At midday, the benchmark morning session.

Liberty Life cuts convertible issue

By Graham Bowley

Liberty Life, South Africa's largest life insurance company. has been forced to reduce its offering of convertible bonds to \$300m from the planned \$360m to \$500m range. Poor demand from investors

in the US was blamed for the shortfall in the issue, which was priced yesterday by lead manager Robert Fleming, But the first global offering

of convertibla bonds by a South African company was hailed as a success by some. "The sale represents a considerable achievement in what have been extremely difficult

and uncertain currency and boud markets globally and given a market that is highly unpredictable," said Mr James Knowles, equity syndicate manager at Kleinwort Benson. "The size of the offering was appropriate for demand and

will provide a useful bench-mark. It will be a precursor to a substantial inflow of funds into South Africa," he said. However, the shortfall will throw doubt on the country's to return to the international capital markets after its first non-racial elections in May.

lt was hoped the offering would pave the way for a spate of financings by the country's under-borrowed corporate sector, and was seen as a test of market sentiment following the resignation of Mr Derek Keys, the South African finance minster, on July 5.

"Although it is believed the US was disappointing, there was very strong interest in Europe," said Mr Roddie Fleming, a director of Robert Fleming. "The US seems to have been far more affected by Mr

However, an analyst in London said: "This deal has not worked and it is not surprising. Very few people believed that it would be successful."

The bonds, due in 2004, with e semi-annual coupon of 6.5 per cent are non-callable for at least the first five years and have "soft protection" for the remaining five years. They are convertible into ordinary shares of Liberty Life at R106.68 per share, representing a premium of 10.4 per cent.

Robert Fleming has the option of subscribing for up to an edditional \$60m of the

AMP offshoot alters Japan stock portfolio

By Tracy Corrigan

AMP Asset Management, the investment management arm of the Australian insurance company, said yesterday that it has completed \$650m-worth of trades in the last four days, in e restructuring of its Japanese stock portfolio. The trade, completed by Morgan Stanley, is believed to be one of the larg-est rebalancings of an actively managed Japanese portfolio.

The trade consisted of 73 stock positions across 21 The changes were initiated Mr Zac Bharucha, AMPAM's new Japanese port-

folio manager, and comprised

changes in specific stocks,

Crédit Foncier de France's Y75bn offering of eight-year bonds yesterday commanded most of the ettention in the Eurobond market, which is still absorbing two large dollar fixed-rate offerings launched

Finland's and Freddie Mac's

INTERNATIONAL BONDS

global offerings, totalling

\$1.5bn each, were both priced Dealers said demand for paper had been helped by the improvement in the dollar's performance yesterday. Finland's 10-year issue,

priced at 55 basis points over

rather than e shift in tha the 10-year Treasury, was bid weightings of specific sectors.

Crédit Foncier's Y75bn offering proves attractive points at the end of the day's trading.

According to one of the underwriters, around 20 per cent was placed in Asia, with the remainder split between the US and Europe. Freddie Mac's five-year deal was priced et 17 basis points over the curve, in the middle of the indicated range. At the end of the day, it was trading at 18 basis points over the five-year

Crédit Foncier's deal was shortened to eight years from an initially-planned maturity of 10 years, due to oversupply in the 10-year area, according to co-lead manager Morgan Stanley. Dealers said the issue was

very attractively priced. With a coupon of 4.75 per cent, the honds proved attractive to asset-swappers, who were able to swap the bonds for floatingrate assets paying around 18 basis points over yen

75bn

100

9.50

According to dealers, asset swaps on the bonds were com-pleted into dollars and French francs, as well as yen.

Loss on disposal of pectin side and UK provisions total £17.6m

Bulmer declines to £3.9m

By Paul Taylor

HP Bulmer, the Hereford cider maker which recently amounced further restructur-ing plans including a with-drawal from the soft drinks market, yesterday reported a sharp decline in full-year pretax profits reflecting exceptional write-offs.

Pre-tax profits fell from £19.6m to £3.88m in the year to April 29. The latest pre-tax figure was struck after the group recorded a £9.76m loss on the disposal of its pectin manufacturing interests, announced in November, and took a £7.84m provision to cover the fundamental restructuring of its UK operations, announced to May.

However, profits before exceptional items increased by 9.8 per cent to £21.5m (£19.6m) reflecting the strength of the group's brands to the UK, Australia and Belgium, markets which have all faced increased competition and pressure on margins. In spite of these pressures operating margins from drinks activities continued to improve from 9.5 per cent to

Turnover edged up by 1 per cent to £254.6m (£251.8m) including £6.3m (£12.5m) from discontinued operations. The modest rise in turnover masked atrong growth from 364n.

PSIT, the investment company

formerly known as Property

Security Investment Trust, yes-

terday announced that pre-tax

profits for the year to March increased by 24 per cent to £12m, against £9.66m.

Moves to revive Norton, one of

the most famous names in

appeared close to collapse yes-terday amid a bitter row

John Budgard (left) with Mike Ward, finance director

the group's cider business which compensated for a decline in soft drinks following the termination of the Perrier/ Buxton mineral water distribution agreement in March.
After a reduced tax charge

After a reduced tax charge there were losses per share of 0.89p compared with earnings of 22.89p. In spite of this, the directors are recommending an increased 6.8p (6.4p) final dividend making a total for the received of 10 Sp. (10.15x). year of 10.8p (10.15p). The shares closed 1p lower at

Mr John Rudgard, chief exec-utive, said the results were "a satisfactory performance in a competitive market." He noted that the group's share of the important draught cider market in the UK continued to grow, reaching 55 per cent last

Bulmer's on-trade volumes expanded by 3 per cent while huoyant Strongbow sales in the off-trade helped the group to boost volumes by 6 per cent to spite of strong growth at the economy end of the market.

In the premium sector, Scrumpy Jack's 40 per cent year-on-year growth substantially ontstripped sector growth of 12 per cent.

Bulmer's beer portfolio vol-umes increased modestly within a market that continues to be highly competitive.

Operating profits from the Australian business rose 25 per cent to £2.97m, while in its first full year Cidrerie Stassen in Belgium produced operating profits of £1.34m.

e COMMENT

Bulmer's decision in May to restructure its business with the loss of up to 300 jobs is a sensible response to the competitive pressures in the domestic cider market which nevertheless is continuing to grow. The move will eventu-ally take about £5.5m out of annual costs - funds which are expected to be reinvested at least in part in the group's solid brand portfolio. Overseas activities, including export sales from Hereford, now represent 21 per cent of group operating profits and the com-pany is looking to increase this further. This year Bulmer's pre-tax profits should reach £24m producing earnings of 29p. The shares are trading or a prospective multiple of 12.55

thet's not happened," said one analyst. "I'd be surprised if

Mr Peter Presland, chief executive, received loyalty bonuses totalling £600,000 on top of his £188,278 salary and a

£29,172 profit-related bonus.

The discretionary bonuses

Two executive directors of CE

amounted to £400,000 for Mr Heath, the insurance broker, Mackenzis Green and £240,000 for Mr Presland. Loyalty pay ments were £600,000 for Mr Mackenzie Green and £360,000 for Mr Presland. Overall the group paid some £2.3m in loyalty payments.

These payments are repayable if notice is given - other than in certain limited circumreinsurance brokers. In the last stances - before March 31 1997 few years, several have been hit by staff defections of the termination of the recipi ent's service contract with the A new incentives scheme

will take effect in 1997. The bonus payments will be charged to the company's profit and loss account over the next three years.

to purchase Redwood for £2.85m By Diene Summers,

Abbott Mead Vickers, the advertising group, announced yesterday that it had agreed to buy Redwood Publishing, the contract publisher, best-known for its American Express, Marks and Spencer, and Inter-City magazines, for an initial cash payment of £2.85m.

AMV also said 537,879 new ordinary shares were being placed by Hambros Bank at 660p aplece to raise £3.35m, net of expenses. The balance will be used by Redwood as additional working capital. Brokers are SG Warburg and dealing is expected to start

tomorrow.

Four additional payments, dependent on Redwoods' performance until the end of 1998, are also to be made. Red-wood's unaudited pre-tax prof-its for the first five months of 1994 were £300,000.

AMV shares rose 1p to close

at 670p. Mr Peter Mead, AMV group chief executive, said that cus tomer magazines had come of age over the past few years and Redwood's magazines were "carefully focused towards existing customers of each of their clients".

There was considerable synergy between AMV's and Redwood's activities, and the purchase was part of the group's strategy of offering integrated marketing to clients, he said. Redwood was formed in

December 1993 after the BBC, which partly owned the company's predecessor, WPL, decided to sell its contract publishing interests, retaining ust its consumer magazines. Mr Michael Potter and Mr Christopher Ward, founders and senior directors of Red-wood, will run the business as a separate company within the AMY group.

Control Techniques stake agreement expires

The standstill agreemant between Control Techniques and Emerson Electric of the US, which holds 29.37 per cent of the Powys-based electronic drives and controls company, expired yesterday.

DIVIDENDS ANNOUNCED

With little sign of Norton receiving its much needed cash injection, the workforce Under the agreement, struck called a meeting with Ms Skal-bania and demanded action. in 1991, Emerson undertook not to increase its shareholding to Control Techniques. Mr Trevor Wheatley, chairman of Control Techniques, said yes-They told ber that with working capital in short sup-ply "we are becoming increas-ingly more concerned about terday he was "not aware of Emerson's intentions." The US the future of the company and company was unavailable for more so, our jobs".

The developments have Howevar, Control Techniques said it was bolding prompted concern among industry analysts, who yesterday said they were pessinistic about Norton's survival. "Norton's future depended talks with Emerson over the US company's 20 per cent stake in CT Drives, the drives systems manufacturer based in on selling the brand name, but

By Caroline Southey Grand Island, New York. Con-trol Techniques acquired 80 per cent of CT Drives from Emerson in 1991.

Under the agreement, Con-

trol Techniques had the option to increase its stake in CT Drives, payable in cash or Control Techniques said it understood that Emerson did

not wish to take up the option to lift its stake, which would trigger a takeover bid for it by the US company. Control Techniques shares closed 9p down at 894p.

Pre-tax profits at Control Techniques in the six months to March 31, were £3.84m after US reorganisation costs of £600,000. In the comparable period profits were £3.72m after reorganisation coste of

Abbott Mead | Cray 10% down on lack of exceptional gains

The absence of exceptional gains resulted in a 10 per cent decline in pre-tax profits at Cray Electronics Holdings from £28m to £26.2m in the year to April 30.

Strong underlying growth at the operating level saw the contribution from continuing operations advance by 53 per cent to £25.8m (£16.8m). Howsver, the comparable pre-tax result was swollen by £8.05m profits on disposals and 23.43m of foreign exchange gains. Turnover in the period under

review from continuing operations increased by 50 per cent to £244.1m (£162.2m). This included a full-year contribution from the Dowty IT business, which was acquired in August 1992, and an initial £38.3m contribution from the P-E International business, which was acquired for £16.2m in September. Discontinued operations added another 227.7m (£38.6m) to total sales.

Earnings per share fell from 13.8p to 8.6p. An increased final dividend of 1.5p (1p) is proposed, making a total for

Profit from continuing operations included an initial £767,000 contribution from P-E International. The discontinued Cray Technology operations, which were all sold during the year, added another £473,000 to operating profits. A

disposal Net interest receipts of £146,000 compared with £871,000 of costs previously. The group ended April with net cash of £15.6m, up from

£235,000 loss was carried on the

At the divisional level the advance was again led by Cray Communications, which boosted its input to £20.9m (£12.7m) on turnover of £165.3m (£127m). Margins improved from 11 per cent to 13 per cent and divisional research and development expenditure

increased to £20m.
Cray Systems, which now includes the P-E Computer Services business, lifted turnover to £57.6m (£35.2m) including organic growth of 15 per cent. Profits of £4.51m (£3.71m) represented a reduced 8 per cent (11 per cent) margin on turn-

ple reta over which reflected the inchsion of the loss-making P.R

The P-E International management consultancy business reported profits of £581,000 on turnover of £21.1m.

The reorganisation of the Crav businesses is now complete. the P-E Intarnational operations have been integrated and the group is now organised into three distinct divisions. Despite persistent rumours of a possible bid for Racal, Cray's management makes it clear that attention is clearly focused on expanding these core businesses interna-tionally – mainly by organic means – and achieving further margin improvements. In particular the management has has set a 20 per cent margin target for the core communications division, which has a strong and expanding product portfolio. Pre-tax profits of £33.2m look possible this year, generating earnings of 10.8p. The shares are trading on a

Sharp increase in activity helps Savills rise to £3.24m cent of its London residential

£1.49m (£819.000).

A sharp increase in activity in both the commercial and residential property markets last year helped pre-tax profits at Savills, the estate agent and surveyor, to more than double. Pre-tax profits were £3.24m (£1.44m) for the year to April 30 on an increase in turnover of only 26 per cent to £31.9m (£25.2m). The shares closed 2p higher at 83p.

Mr George Inge, chairman, said: "There seems to be soms uncertainty within the finan-cial markets generally, which may impact on investor senti-ment, but so far has had little effect on our residential side."

The commercial division saw a 25 per cent increase in sales to £13.4m producing am 82 per

Yates plans to | Suffering pain to recapture past strengths side after float

Yates Brothers Wine Lodges, the independent drinks group which claims to have first introduced wine to the north of England, yesterday announced plans to double the size of its retail operations following its forthcoming flotation.

Funds raised by the £10m placing, giving the company a 254m markat capitalisation, will be used to reduce group borrowing and launch an expansion programme which envisages a portfolio of 100 outlets by the year 2000.

Institutions have been offered shares at 140p as part of the float, which involves 5.7m new ordinary shares and 1.3m existing shares Although the placing will dilute the Yates family's 75 per cent shareholding, some 40 rel-atives will be left with a 65 per

cent stake when the company obtains a listing.

Mr Peter Dickson, managing director and great-grandson of Mr Peter Yates, the group's founder, said he was confident ofwinning widespread institu-

"We believe there is potential to open a Yates in every town with a population of more than 75,000," Mr Dickson

The group - which first came to the market in 1986 under the matched bargain Rule 535 - has set its sights on new outlets in three target areas: Yorkshire and the north-east, the Midlands and the M1 corridor to London.

Initially, however, most of the funds raised by the placing will be used to wipe out £8.5m of secured loans and unsecured bank overgraits. Mr Dickson said the com-

pany would rely on progressive burrowing to fund new outlets, but added that gearing was unlikely to exceed 33 per cent. Gearing in the year to March 27, when the group made pre-tax profits of £3.36m (£2.77m)

funding surplus. Mr Richard Goeltz, Naton turnover of £43.9m (£35.8m), West's chief financial officer, was 25 per cent. says tha bank is accepting Dealings are expected to begin on July 19. The placing lower returns because it must lend the surplus on wholewas sponsored by Panmure sale markets, where margins

 Retail funds belp banks'
 Banks are placing more balance sheets in two ways.
 emphasis on selling financial balance sheets in two ways. One is that they are a stable funding source. Wholesale funds, lent in large tranches by banks or by institutions which have surplus cash, fluctuate in price and supply can dry up quickly if financial markets are volatile, or a bank appears

The second is that retail funds tend to be cheaper at the margin. Once a bank has set up a branch network, the marginal cost of gathering deposits is usually lower than borrowing from wholesale markets. The relative costs are more difficult to calculate if branch costs are added to the equation.

products such as life assurance rather than landing money. They see savings and deposit accounts as a risk-free means of expanding their customer base. They hope that they will be able to persuade such customers to buy other things

The last factor is the highest priority for most. Mr Goeltz says that it lay behind Nat-West's deposit push from early 1992. "Wa recognised then that the bank had to develop alternativa income streams. The key is to satisfy more customer needs from essentially the sama infrastructure," he

However, gathering deposits

sell to savers because of technology, TSB this year achieved a 20 per cent response to 8 mailshot offering personal loans – 10 times the normal response - because it had already credit-scored the customers to whom it sent the

But whatever the attractions of gathering deposits, banks now face a problem in finding a proper use for them. "Most of us now have a surplus of retail deposits because of poor loan demand. It is difficult to find suitable outlets," says Mr Richard Orgill, Midland'a deputy chief executive.

The problem is compounded by the fact that societies are now having to bid strongly for retail funds to compete with National Savings, and are offering attractive rates. Bankers say that some societies are giving savers rates which are too high to make a profit if the funds are lent wholesale.

This competition for funds is one reason cited by banks for wanting to buy building societies. Some see it as an opportunity to bny back the retail deposit strength they have lost over the past 20 years. Without this elegant solution, banks face a tough struggle to rebuild market share.

Mr Goeltz says that banks must be consistent to re-establish a good reputation. There is a cost to convincing custombanks can improva their chances by persuading savers ers that we are a valuable ally in the savings market," he says. That cost could start to look very high if banks cannot quickly achieve the other sales for which they hope.

NOTICE TO HOLDERS OF FOUNDER, 1991 AND 1993 WARRANTS

FOUNDER WARRANTS: the 2,652,000 twinned warrants (the "Founder Warrants") to subscribe for shares in Euronamel P.L.C. ("EPLC") and in Euronamel S.A. ("ESA") (issuable in the form of Units) constituted, in the case of EPLC, by an instrument dated I September 1986 (as amended by Supplemental Instruments dated 4 September 1990 and 24 June 1993) and, in the case of ESA, by a Board resolution dated 13 August 1986 (as amended by Board resolutions dated 4 September 1990 and 24 June 1993 with the approval of the warrantholders given at general meetings held on 3 September 1990 and 23 June 1993); and

1991 WARRANTS: the 7.142.857 (winned warrants (the "1991 Warrants") to subscribe for shares in EPLC and ESA (issuable in the form of Units) constituted, in the case of EPLC by an Instrument dated 10 June 1991 (as amended by a Supplemental Instrument dated 24 June 1993) and, in the case of ESA, by a Board resolution dated 23 May 1991 (and subsequently amended by a Board resolution dated 24 June 1993 with the approval of warrantholders at a general meeting held on 23 June 1993); and

1993 WARRANTS: the 534,141,299 twinned warrants (the "1993 Warrants") to subscribe for shares in EPLC and in ESA (assuable in the form of Units) constituted, in the case of EPLC, by an Instrument dated 25 June 1993 and, in the case of ESA, by a Board resolution dated 24 June 1993;

are hereby informed that, as a result of the rights issue (the "Rights Issue") of EPLC and ESA conferring rights to subscribe for an aggregate of 323,884,308 New Units on the basis of 3 New Units for every 5 existing Units held at a price per New Unit of 265p or FRF 22.50 or a fixed combination of 132.5p plus FRF 11.25, the number of shares in EPLC and ESA, twinned as Units, which a holder of Founder, 1991 and 1993 Warrants may subscribe on exercise of the said warrants has been adjusted.

The results of the adjustment are as follows:

inder Warrants: each Founder Warrant entitles the holder thereof to subscribe for 12.56 Units (previously 11.20 Units) at an aggregate price of £9.72 plus FRF 100. Subscription Rights under the Founder Warrants are only exercisable in respect of whole numbers of Units.

- 1991 Warrants: each 1991 Warrant entitles the holder thereof to subscribe for 1.24 Units (previously 1.11 Units) at an aggregate price of £1.75 plus FRF 17.50. Subscription Rights under the 1991 Warrams will only be exercisable in respect of whole numbers of Units, 1991 Warrants are not exercisable at present. 1993 Warrants: ten 1993 Warrants entitle the holder thereof to subscribe for 1.12 Units (previously 1 Unit)

at an aggregate price of £1,675 plus FRF 14.125. Subscription Rights under the 1993 Warrants are only exercisable in lens and in integral multiples of ten and only if and to the extent that sufficient 1993 Warrants are exercised so as to entitle the holder to be allotted one Unit or an integral multiple of Units

Certificates setting out the above adjustments have been obtained from Morgan Grenfell & Co. Limited and Banque Indesurez. Copies of the certificates are available for inspection by holders of the Founder, 1991 and 1993 Warrants at the registered offices of EPLC and ESA.

The right to exercise Founder and 1993 Warrants was suspended from 12 May 1994 until 11 July 1994 inclusive The Founder and 1993 Warrants will become exercisable with immediate effect; the above adjustments will apply to Founder and 1993 Warrants exercised on and after 12 July 1994. Under the terms and conditions of the Founder. 1991 and 1993 Warrants, the suspension will not result in an extension of the Subscription Period. The 1991 Warrants are not exercisable at present.

New York buyers | CBoT hopes for big yield from crop insurance futures lead coffee prices to fresh peaks

By Deborah Hargreaves

New York traders took the lead in the coffee market yesterday. pushing the London Commodity Exchange September delivery position to a new 81/4-year peak of \$4,085 a tonne. But the more subdued London tone dominated towards the market close and in last minute trading the price dipped just below the \$4,000 a tonne mark.

By the end of trading the mber contract was quoted at \$3,990 a tonne ~ a rise of \$92 - while all other positions up to next May remained above \$4,000. New York prices were continuing firm in midday trading with the September arabica futures contract showing a rise of 18 cents to \$2.65 a

Laurie Morse on a scheme that could cut the cost of government disaster compensation to US farmers

he US government and the Chicago Board of Trade are collaborating on a novel market-based effort to reduce the cost of government support to farmers after crop disasters like floods and

droughts. The co-operation is a by-product of a major overhaul in the US federal crop insurance programme this year, but the resulting options contracts could find favour with a variety of agribusinesses that need to manage risks associated with volatile grain production levels in the US. The CBoT's futures and

options pits already set the benchmarks for world prices for wheat, maize and soyabeans. Those contracts offer producers, grain dealers, and food processors a kind of price insurance mechanism.

The new options, which are still in the design stage and have not been announced publicly, will provide a means for hedging the size, rather than the price, of a crop in specific areas. The contracts would pertain to US crops, but analysts say the concept could be

applied anywhere in the world. The "area yield options contracts", as they are called, would work much like similar price-based contracts. However, instead of selecting a strike price, traders would select a strike yield for a particular crop in a particular area. A holder of a call option for maize grown in the Midwest, for example, might select a strike of 100 bushels an acre. If the actual yield, as assessed by the US Department of Agriculture after harvest, was

holder would receive a cash size," she says. "This could payment. Conversely, a put holder would receive payment if the crop was smaller than the chosen strike. The contracts would mature at harvest, and be settled in cash.

In essence, the options would be a production insurance mechanism, says Ms Ann Berg, a CBoT Director and a champion of the yield options concept. She expects a wide variety of grain handlers, barge and rail companies, food processors, and bankers to use the product. "There has been a long period of consolidation and integration in agribusiness which has created big companies with huge capital investments in storage terminals, export houses, and other facilities whose profitability depends largely on the volume

handled, and hence the crop

help them manage that aspect of risk in their business." Ms Berg expects the options contracts to be ready to trade sometime next year.

The USDA views the options as one way to attract more capital into the re-insurance network that backs the government's vast crop insurance programme for farmers.

That programme has been widely criticised for its lack of actuarial soundness, low levels of farmer participation, and its high cost. For each of the last seven years congress has voted additional disaster relief to farmers, trying to fill the gaps left by the insurance system. Last year the US paid out more than \$4hn in disaster relief and crop insurance payments to farmers following record floods in the Midwest. The money

paid to compensate farmers for crop losses represented one quarter of all federal subsidies paid for wheat, rice, feedgrains and cotton programmes, including export subsidies.

In an effort to manage the budget drain congress this month is expected to approve a controversial overhaul of the crop insurance programme.

Under the new system, farmers will be required to sign up for crop insurance so as to qualify for government price supports. This, USDA experts say, will triple the size of the insurance programme and strain the nation's crop reinsurance resources. Crop insurers liabilities could rise to \$40bp, from their current coverage of \$13bn, according to Mr Joseph Glauber, principal economist in the USDA's Office

of Economics, says the insurance programme is expanding just as reinsurance capacity is dwindling. "We're worried there won't be enough capital," he says. "The options markets would allow some wholesale management of production risks and could bring in other players.

While innovative, the yield ontions concept is unproven. and may not attract any more customers than the CBoT's nearly-moribund catastrophe insurance futures contracts. However, Mr Richard Sandor. the derivatives wizard who helped invent financial futures in Chicago, is enthusiastic about the idea. "This will appeal to many types of traders," he says. "These will be the first contracts to bridge the agricultural, insurance and capital markets," at the CBoT.

Generators forecast to need 15.5 per cent more uranium by 2000

By Kenneth Gooding, Mining Correspondent

New uranium mines will be needed at the turn of the century to cope with a forecast 15.5 per cent world-wide increase in requirements by nuclear power stations, according to the Uranium Institute. an international association of producers and consumers.

Most of the new capacity will be in Canada, the US and Australia, it points out in what the institute claims is "the most comprehensive global analysis

hished so far". The report notes that the World Energy Council predicts global energy demand will be 50 per cent higher in 2010 than in 1990 and then looks at projected nuclear generating capacity on a country-by-country basis. It concludes that requirements will rise from 56,076 tonnes in 1993 to 64,786

Some of the extra uranium will be supplied from existing mines which have been operating at well below capacity for

tonnes in 2010.

of the uranium market pub- some years. There is also the very real prospect that uranium derived from former military material will begin to be released into the market at some point in the next decade
- "a real manifestation of the peace dividend", was the way Mr Ian Duncan, the institute's chairman, described it. Depending on the restrictions placed by governments on this material, it could add between 5 per cent and 15 per cent to

The report points out that

within 10 years.

world supplies from all sources

uranium production in the western world has fallen sharply in recent years and in 1992 covered only half of western demand. The gap was filled by uranium from stocks, from reprocessing products and from imports from the Commonwealth of Independent States, Eastern Europe and China

As existing western stocks begin to run out towards the end of the 1990s, and if the market share of the CIS and East European countries con-tinues to be limited by eco-

nomic factors and by trade restrictions imposed by the US and the European Union, production of uranium from western mines will need to increase, the report suggests.

However, Mr Duncan said

the fundamental issue raised

by the report was "how is the

world to meet the burgeoning demand for electricity and what part is nuclear power to

play in this?"
The report says that in 1991-92 nuclear power supplied about 7 per cent of the world's primary energy and 17 per cent

its share of total electricity production. "Nevertheless, nuclear power's future role and growth faces considerable uncertainty in spite of its competitiveness and demonstrated environmental benefits.

of its electricity. Since 1971 nuclear power has been the

Footsie recaptures 3,000 mark in good volume

By Terry Byland, UK Stock Market Editor

The latest official statistics on domestic inflation and employment found a very positive response in the UK stock market yesterday. The FT-SE Index rose by more than 40 points to close convincingly above the 3,000 mark which has proved a barrier since the middle of last month. Reports that continental European funds had been buyers of shares in London were borne out by an increase of around one fifth in trading volume.

After breaking though the Footsie 3,000 mark in early trading, the market remained firm behind a positive British government bonds sector. The final reading showed the FT-SE Index at 3,005.5 for a net gain on the day of 41.4.

The lead came from a powerful recovery in the stock index futures sector, depressed on the previous day by a heavy sell-off by a US fund. After struggling for several sessions, the September contract on the Footsie moved up to a significant premium against the cash market yesterday morning and held sol-

idly above 3,000 until the close.

A steadier trend in the US dollar set the stage for market recoveries across Europe. London sloughed off a bout of nervousness in mid-afternoon when rumours circulated in Europe that the Federal Reserve might, after all, be about to raise rates in the US.

But the very slight increase in US June consumer prices was in line with expectations, and the bout of nerves appeared to reflect nothing more than the Fed's failure to sup-

ply liquidity at its traditional time for intervention. Today brings the latest US retail sales data which will provide the latest focus for caution in European securities mar-

Share prices opened higher, in line with firmness in the US dollar and other European bond and stock markets. But the chief boost to UK equities came from the release of the day's batch of domestic eco-

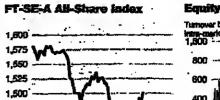

nomic data at mid-morning. Steady headline inflation of 2.5 per cent for June, with the underlying rate 0.1 per cent easier, steady underlying wage inflation of 3.75 per cent and a fall in unemployment in May, underpinned the market's most optimistic scenario of economic growth and subdued inflation.

The influence of the futures market could be seen in the pattern of trading. Of total Seaq volume of 720.8m shares, around 50 per cent was in the Footsie-listed shares, s higher proportion than usual and an indication of substantial activity in the blue chip stocks which make up the Footsie contract.

However, the second line stocks were sufficiently active to lift the FT-SE Mid 250 Index by 27.8 to 3,493.7. On Tuesday, retail or customer business was worth £1.19bn, confirming the return to levels of turnover associated with the longrunning bull market in London. Increasing reports that interna-

tional funds may be moving out of dollar-based securities and towards European bonds, with UK gilts in particular favour, gained some credence yesterday from the strong performance of the London market. Late trading saw bond markets ease back from the day's highs, however.

Some nervousness was again expressed regarding the powerful influence exerted by the futures markets, but it is now widely recognised that the stock index futures are the conventional route by which international funds seek to change their asset stance in global markets and that the London futures market has established itself as an important stage for these operations.

Portfolio worries

Later, it emerged that Glaxo

had disbanded its in-house investment arm, which is based in Bermuda, and had already started to liquidate an unspecified portion of its investments prior to appointing a new fund manager. The company refused to say how much of its £1.7bn internal portfolio it was selling. But a. spokesman commented; "we are selling some of the invest-

The company added that, following an internal investigation, it had decided to hive off ceuticals and not financial investment." It refused to name the choice of fund man-ager. Barly indications were that the portfolio might be spread among several institu-

their peak but US selling out-weighed continued institutional buying in the UK and took the price back to 1% up at 551p on turnover of 6.9m.

The shares were 11 higher at

Turnover in British Steel rose to 22m, making it the day's most haavily traded stock, after NatWest Securities. a long-time bear of the shares,

announced a substantial upgrade in its profits forecast. The shares put on 31/4 to

155p.
The securities house, which met British Steel executives on Monday, raised corrent year profits estimate by £130m to £400m. It said the move took account of changing currency forecasts, and expected rises in product prices in the second

half of the year. However, there was little change in NatWest's general caution on tha British Steel and it continued to advise investors to "reduce holdings." Analysts at the broker said: "Even on this new forecast, it remains an overvalued cycli-

II Major Stocks Yesterday

BAA strong

Airports operator BAA cheered the market with better than expected traffic figures for the month of June.

The shares jumped 20 to 948p, on trade of 1.7m after the figures revealed a 9.1 per cent year-on-year increase in passengers handled. UBS reitersted its buy recommendation on the stock boosting sentiment further. The shares have been a strong performer since last week's favourable figures from British Airways.

The news from BAA also encouraged buying of British Airways and the shares finished 10 ahead at 426p, with volume reaching 3.3m.

Oil shares continued to make good progress as prices responded to the recent upsurge in crude oil prices es a result of the Nigerian oil workers strike.

BP was the favourite stock of mant institutional fund managers to participate in the oil price rise, with dealers pointing to the stock's high gearing to rising prices. At the close BP shares were 11 better st 395%p after relatively heavy turnover of 12m. And there was evidence that some US fund managers had moved to buy back some stock after the recent surge of selling from across the Atlantic.

Shell, on the other hand, underformed BP as some institutions remained concerned about the group's sizeable interests in Nigeria. Shell

shares settled 6 firmer at 701p. Exploration and production stocks, which have tended to lag the majors, made rapid progress led by Enterprise which put on 11 to 421p and Lasmo 4 better at 140p.

Better than anticipated fig-

ures from tour operator Owners Abroad and an upbeat results statement helped the shares gain 6 to 99p. The group reported a loss of £13.8m. against a loss of £17.4m a year

earlier and better than the market's worst fears. Sentiment in Owners spread to Airtours, where the shares hard-ened 2 to 462p. Solid demand for Rank Organisation ahead of today's interim figures saw the shares appreciate 14% to 391%p. Speculation that Thurn EMI may make an announcement on its demerger plans at tomorrow's annual meeting was beard in the market. The

shares gained 12 to 1074p. Insurance and tobacco conglomerate BAT Industries jumped 15 to 425p in response to positive figures from US rival Philip Morris. Also, the group's proposed acquisition of the American Tobacco Company division of American Brands was cleared by the UK

Trade and Industry Secretary. Food and detergent group Unilever was one of the few fallers in the market as what one trader described as a "technical situation" overhung the stock. The shares were also suffering from a recent sector review by Smith New Court which restated the analysts' bearish view on the stock. They closed 3 down at 990p.

Great Universal Stores added a further 13 at 587p as share buy back speculation reached fever pitch ahead of the figures today. Last year the company announced that its was enfranchising its shares and investors are increasingly bungry for good news this year. The market expects a full-year profit of £517m against £475m last year. SmithKline Beecham recov-

Smith New Court had taken the stock on at 397p and placed to have been actively on the bid in the pharmaceutical sec-tor and SmithKline rival Wellcome rallied from early pre-results weakness to close 4 up at 604p after being 6 lower, while Zeneca lifted 61/2 to 7461/sp. Recent weakness in the dollar plus the sale of a 2 per cent block of Willis Corroon and 8. broker downgrade in Sedgwick continued to drive the insur-

the recent 9m share bought

deal was finally said to have

tled 3 off at 134p and Sedgwick 7 lower at 157p. The regional electricity stocks shrugged aside press criticism and made good progress as income funds moved in to buy the sector.

ance brokers lower. Willis set-

Bastern was one of the sector's best performers climbing 19 to 616p, as was East Midlands, up 23 at 605p. Southern jumped 17 to 601p.

Bank shares mirrored the market's surge with HSBC, also stimulated by a strong rise by the Hong Kong market, jumping 21 to 687p. NatWest, now very much in favour with a number of influential UK funds, moved up 11 to 445p.

Royal Bank of Scotland remained a poor performer after the recent stake sale, the shares easing 2 to 402p, MARKET REPORTERS:

Peter John, Joel Kibazo, Steve Thompson

ranium by 20 hit Glaxo

Shares in Glaxo the leading UK pharmacenticals group, were dragged lower in after-noon trading in London when US investors sold heavily on worries over suspected losses on the company's £2.2bn investment portfolio. The company is believed to have lost at

CURRENCIES AND MONEY

MARKETS REPORT

Rumours boost dollar

Rumours of a rise in US interest rates and ongoing fears of central bank intervention yesterday helped the dollar bounce off recent lows, writes Philip Gawith.

These factors overshadowed the release of US consumer inflation figures which were in line with market forecasts - a 2.5 per cent year on year rise to June. As with Monday's producer inflation figures, the market's initial response was to sell the dollar as the figures did not seem to provide cause for the Fed to tighten policy.
The dollar finished 1½ pfen-

nigs higher against the D-Mark in London at DM1.5383 from DM1.5235. Against the yen it closed at Y98.155 from Y96.8050.

The dollar's bounce came amid evidence of increasing nervousness in the market that the currency might be close to the bottom. Sentiment remains negative, but investors are wary of being caught short. The D-Mark turned in a

mixed performance in Europe, amid evidence that investors have used the currency's recent strength as an opportunity to take profits. The Bel-gian franc finished unchanged at BFr20.61 against the D-Mark after the central bank cut its central rate to 4.90 per cent

from 4.95 per cent. This brought Belgian rates in line with German rates following a two basis point cut in the German repo rate to 4.91

■ The good inflation data in the US released yesterday and on Tuesday did not deter markets from working themselves into a frenzied lather of expectation about the Fed raising rates. Initial rumours involved a 50 basis point rise in the discount and Fed funds rates. The

size of the likely increase later grew to 100 basis point. Mr David Cocker, economist at Chemical Bank, said the relatively modest bounce in the currency suggested the market was not altogether convinced by the rumours.

But Mr Ian Gunner, international economist at Chase Man-

Sterling Dec '94 Puture contract, bid price 84.5 --93.0 1994

Jul 13 - Prev. clase -1,5570 1,5665 1,5662 1,5645 1.5685 1.5680 1.5675 1.5645 market gets." Mr Cocker said there had been reasonable buying from a

wide variety of sources, but underlying sentiment ramained deeply negative towards the dollar. He said the dollar was enjoying a "correc-tive rally" rather than a sustainable upward move.

The Chemical analyst said the further rumour that the Fed was taking prices "added to the sense in the market that the Fed is keen to stabilise the dollar now." He said the rate of decline in the dollar on Tues-day had been approaching lev-els which central banks might have considered inappropriate.

The German newspaper Handelsblatt, meanwhile, reported that "sources in the US president's delegation let it be known on Tuesday that a consensus had been in Naples to accept a dollar level of Y96.98 or DM1.50 and (only) to intervene heavily below this level."

Mr Peter Luxton, economist at Barclays in London, said the sober performance in recent days of the D-Mark, against European crosses, was a "pos-sible early indicator that the bear market in \$/DM may have been overdone."

He said the 9 per cent fall in the dollar since the beginning of June was difficult to understand since all the explanaMr Luxton said that if the Fed were to raise rates now, against a benign inflation background, this would be very well received by the market. It would show that the Fed was responding pro-actively to inflation - the market has worried that it has fallen "behind the game" - and that it was not bowing to the Clinton White House which has made clear that it does not feel rates need

Short sterling futures had a heady day after the release of better than expected retail prices inflation. It fell to 2.4 per ent in June from 2.5 per cent

in May. Volumes were heavy, with the December contract trading nearly 55,000 lots to close 16 basis points up at 93.85. Analysts said the market was buoyant, with rates converging on tha cash rates after a protracted period of extreme interest rate pessimism. A gilt auction at the end of

the week, and the health of sterling, are the main obstacles to further advances. The sterling index closed

slightly firmer at 79 from 78.8. The pound was slightly firmer against the D-Mark, at DM2.4089 from DM2.3958. It slipped slightly against the dol-lar to finish at \$1.566 from \$1.5725.

The Bank of England provided £680 of late assistance to UK money markets after earlier forecasting a £850m shortage. The Bank had earlier pro-vided £63m assistance. Ovarnight monay tradad between 4% and 7 per cent.

German call money sased slightly to 4.90/5 per cent from 4.95/5.05 per cent after the Bundesbank sanctioned a two basis point decline in the repo rate to 4.91 per cent. With the small fall in the repo suggesting rates may be close to the bottom, euromark futures lost ground. The December contract closed at 95.05 from 95.09.

Is this your own copy of the Financial Times?

Or do you rely on seeing someone else's? Every day the FT reports on the topics that matter to people doing business every day, in and from Europe.

We cover the latest European, U.S. and international news, and analyse the implications from a European perspective. In fact you'll find far more than finance in the FT.

No surprise then, that the Financial Times is

read by more top business executives in Europe than any other publication.*

Make sure you're one of them by getting your

own copy of the newspaper delivered daily to your office.

Collection of factors combine to lift Dow

Wall Street

Reassuring news on inflation, a modest rebound in the dollar and news of another bid for the QVC television shopping group lifted US share prices across the board yesterday morning, writes Patrick Harverson in New York.

At 1 pm, the Dow Jones Industrial Average was up 8.42 at 3,711.08. The more broadly based Standard & Poor's 500 was also firmer at the halfway mark, up 1.32 at 449.27, while the American Stock Exchange composite was un 2.54 at 428.04 and the Nasdaq composite up 6.68 at 716.27. Trading volume stood at 158m shares by

Share prices firmed from the opening, helped by news that the consumer price index had risen by only 0.3 per cent last month. Although the CPI number was not as positive as the report on the producer prices index, which was flat last month, it was in line with expectations, and reassured investors who had been worried that strong second quarter economic growth might have fed through into higher prices. Also, taken together, the June inflation data was unlikely to prompt the Federal Reserve into raising interest rates

Consequently, stocks posted solid gains in early trading, rising by more than 20 points at one stage. Equities received no help from bonds, which ignored the good inflation news. By early afternoon the benchmark 30-year bond was unchanged, still yielding 7.68

Latin America

Nasdao stocks outperformed other sectors of the market thanks to strong technology stocks, and news of a rival bid for OVC. Last week the home shopping television group announced that it was merging with CBS, the broadcast television network. Late on Tuesday night, however, Comcast, the big telecommunications group

which owns 15.4 per cent of

QVC, launched a counter bid

worth \$2.2bn The rival offer immediately persuaded CBS to abandon its merger plans, which did not deter investors from buying QVC in the bope that the stock's price would be driven higher by new bids for the company. In early afternoon trading QVC was up \$6 at \$42 in volume of 4.7m shares. Comcast, which is also traded on the Nasdag market, was down

On the New York SE, CBS shares were also higher, up \$6 at \$306, although the rise in the stock had less to do with the news of its failed merger with QVC and more to do with the company's plans, announced yesterday, to buy in 3.5m of its own shares and split the stock five-for-one.

\$1% at \$15% in volume of 4.4m

Hilton Hotels rose \$% to \$62% after reporting second quarter profits of \$33.9m, up 26 per cent from a year ago. Among higher Nasdaq technology stocks. Intel was up \$% at \$61, Cisco Systems \$1% at \$24%, Lotus Development \$1% at \$41%, and Oracle \$% higher at \$39%.

FRANKFURT sold the Big Three" chemical stocks as the Dax index rose 5.95 to 2,054.00 in turnover down from DM6.4bn to DM5.4bn. BASF, Bayer and Hoechst fell by DM6.70 to DM291, DM5.20 to DM337.80, and DM3 to DM310 respectively, on the weakness of the dollar against the

D-Mark this year. Mr Albert Richards, chemicals analyst at CS First Boston in London, acknowledged that with chemicals priced in global terms, the present currency relationships meant a less competitive European chemicals industry and a more competitive one in the US.

However, he said, when the dollar settles this will provide a nice buying opportunity.

"Past periods of dollar weakness were accompanied by periods of overcapacity in the US, bringing significant pressure to bear on European pricing," he explained. "The US, now, does not have that much spare capacity.

stayed volatile ahead of futures and options expiry tomorrow. The AEX index improved 3.10 to 386.31, recapturing most of Tuesday's losses.

Royal Dutch rose F1150 to Fi 186.80. Oce van der Grinten. up F12.00 at F176.00, attracted an upgrade by James Capel earlier in the week which rated the stock a buy opportunity. Capel said that fourth quarter 1994 and 1995 profits growth should be in the region of 20 per cent, placing the compa-ny's shares at a 1995 multiple

in line with the market. PARIS built up a good rise on relatively thin turnover ahead of its holiday today and tomorrow. The CAC-40 index gained 32.51 or 1.6 per cent to 1,974.59.

Oils were strong, helped by firmer crude prices. Elf Aqui-taine rose FFr18.10 to FFr395, and Total FFr6.30 to FFr307.30. ZURICH fell to its low for the year as Roche gave up 5.3 per cent in further response to Tuesday's lower than expected first half sales. The SMI index lost 33.5 or 1.3 per cent to 2,474.5 in higher volume as recently inactive institutional

ures today, saw its registered SFr11 lower at SFr650. MILAN reversed its five-day slide as hopes grew that bud-get details would finally emerge after last night's cabinet meeting. The Comit index picked up 9.25 to 687.35 as the market was also encouraged by a forecast from the Isco research group that the public sector deficit next year could

Industrials were among the better performers with Pirelli rising L114 or 45 per cent to L2.643 in response to recent positive analysts' notes. Fiat was L96 higher at L6,585. Telecommunications, which

had been one of the biggest sufferers in the recent retreat, also rose atrongly with Stet adding L188 or 3.6 per cent to L5,312 and Sip putting on L122 or 3 per cent to LA,218.

MADRID extended its gains to a fifth day, the general index

closing 2.68 higher at 301.40 in turnover of Pta32bn. Endesa was the most active stock as it rose Pta110 to Pta5.800. However, Repsol came back from a high of Pta4,110 to close only Pta5 higher at Pta4,010 after Nymex oil prices turned mixed in New York.

Nordic markets mostly had a

tech appeal of Ericsson and Nokia in Sweden and Finland - after strong second quarter results from Motorola in the US on Tuesday - and by higher oil prices in Norway. STOCKHOLM rose for the fifth consecutive session, Erics-

son climbing SKr16, or more than four per cent to SKr399, as the Affarsvärlden General index closed 13.90 higher at 1.397.70. HELSINKI SAW Nokia up another FM17 to Fm493 following continued gains for its American depositsry shares in New York.

OSLO's all-share index climbed by 9.33 to 617.31 with Norsk Hydro NKr6 higher at NKr228.50 on oil prices, high aluminium prices and a decision to lift magnesium production at Hydro's plant in Can-

WARSAW was encouraged by Tuesday's advance through the 10,000 level, and the Wig index put on another 804.7, or 7.8 per cent to 11,062.9. Turnover rose by 35 per cent to 1.400bm zlotys.

Roundup

The strong performance seen in Hong Kong provided a fillip elsewhere in the region. HONG KONG rose another

2.8 per cent taking the Hang Seng index above 8,800 at the close in a continued sharp technical rebound as bargain hunters swept back into the

The index rose 237.46 to 8.828.91 in turnover that swelled to HK\$3.9bn from

Nomura commented that taken in isolation, the market's two day rise of 5.2 per cent looked

in the wider context of the negative impact on valuations of rising interest rates, it looked somewhat of a swan-song. "The slow slide in the market now looks destined to accelerate with third quarter 1993 levels looking the most obvious downside target"

Previously hard-hit property stocks led the rally for a second day. Cheung Kong rose HK\$1.90 to HK\$34.10. Henderson Land added HK\$2.70 to HK\$37 and New World humped HK\$1.30 to HK\$22.50.

APORE closed higher on demand from foreign funds for blue chips, and the Straits Times Industrials index rose 24.58 to 2,183.93. Commercial property stocks led the return of institutional buying in the wake of a pick up in commer-

cial property rentals.

KUALA LUMPUR was again encouraged by bopes of an early general election and the composite index put on 3.95 to 989.57. SYDNEY displayed renewed confidence although brokers warned that the posttive sentiment was fragile ahead of the release of yester-

day's US inflation data. The All Ordinaries index closed 5.7 points stronger at 1.978.6, after a day's high off

WELLINGTON saw demand for forest sector stocks and the NZSE-40 capital index gained 15.73 to 1,970.52.

MANILA was weighed down by the continuing slide in PLDT although some secondline issues firmed.

The composite index fell to 22.56 to 2,510.76, prompted mainly by PLDT's \$1% drop to \$52% in New York. The stock's local price fell 25 pesos to the year's low of 1,400 pesos.

SEOUL was flat after renewed interest in financials and some smaller capitalised shares was eroded by profittaking. The composite stock index added 1.38 points to

BOMBAY ended slightly higher as volumes fell sharply due to thin attendance on the trading floor after many employees were late arriving for work after monsoon rates threw suburban train services out of gear. The BSE 30 share index rose 2.45 to 4.131.52

Companies from emerging markets have been turning increasingly this year to issuing

ADR's in the US, according to Citibank.

India has led the way, with 18 companies having launched ADR programmes so far in 1994, followed by Hong Kong with 10, and Brazil and Mexico with nine. Citibank comments that the total dollar trading volume for the instruments – a certificate issued to facilitate trading in overseas stocks – reached \$135bn in the first half, up 60 per cent from first half 1993.

Other emerging market countries which have issued ADRs this year include China, Korea, Ghana, Hungary, Turkey, Chile and Peru. Mr David Boyle, managing director, says that the strong growth seen in ADR trading is "being fuelled not only hy investors attracted to the higher potential returns for overseas equities over the long term, but also because there is now greater emphasis on diversifying portfolios internationally."
